

## Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

## Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

## Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

---

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

**The date shows when this volume was taken.**

To renew this book copy the call No. and give to the librarian.

**HOME USE RULES.**

**All Books subject to Recall.**

Books not used for instruction or research are returnable within 4 weeks.

Volumes of periodicals and of pamphlets are held in the library as much as possible. For special purposes they are given out for a limited time.

Borrowers should not use their library privileges for the benefit of other persons.

Books not needed during recess periods should be returned to the library, or arrangements made for their return during borrower's absence, if wanted.

Books needed by more than one person are held on the reserve list.

Books of special value and gift books, when the giver wishes it, are not allowed to circulate.

Readers are asked to report all cases of books marked or mutilated.

**Do not deface books by marks and writing.**

# THE EDUCATIONAL TIMES,

AND  
Journal of the College of Preceptors.

Vol. LXI.] New Series, No. 561.

JANUARY 1, 1908.

{Published Monthly, price, to Non-Members, 6d.; by Post, 1d. Annual Subscription, 7s.

## COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

### GENERAL MEETING.

The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 25th of January, 1908, at 3 p.m.

### MEMBERS' DINNER.

The Members' Dinner will take place at the Gaiety Restaurant, Strand, W.C., on Saturday, the 25th of January, at 6.30 p.m. Tickets (not including wine), 6s. each. Members who intend to be present are requested to send early notice to the SECRETARY. Members may obtain tickets for their friends.

### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 31st of August, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in February.

**Certificate Examinations.**—The Midsummer Examination for Certificates will commence on the 30th of June, 1908.

**Lower Forms Examinations.**—The Midsummer Examination will commence on the 30th of June, 1908.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Spring Examination in 1908 will commence on the 3rd of March.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

### WINTER MEETING FOR TEACHERS.

January 6th to 15th, 1908.

The Fifth Winter Meeting for Teachers will take place at the College of Preceptors from the 6th to the 15th of January, 1908.

The programme will include Lectures on general principles of education, and on methods of teaching various school subjects, as well as visits to Educational Institutions.

The Fee for the whole Meeting is 15s.

Tickets may be obtained from the SECRETARY of the College of Preceptors. Tickets (not transferable) will also be issued at half fees (*i.e.*, 7s. 6d. for the whole Meeting) to members of the following Teachers' Societies:—The Teachers' Guild (Central Guild and Branches), The Birmingham Teachers' Association, The Liverpool Teachers' Guild, The Training College Association, The Head Masters' Conference, The Incorporated Association of Head Masters, The Private Schools' Association, The Assistant Masters' Association, The Association of Assistant Mistresses, The Froebel Society, The National Union of Teachers, The Welsh County Schools Association, The Preparatory Schools Association, The Association of Head Masters of Roman Catholic Schools, The Modern Language Association, The Child Study Association, and any other organized association of Teachers. Tickets at half fees will also be issued to candidates at the Diploma Examination of the College of Preceptors.

Members of the College of Preceptors will be admitted free of charge.

Tickets, price 1s. for any single Lecture, may also be had at the College on the day of the Lecture, if the available seats are not already occupied.

The detailed Programme may be obtained from the SECRETARY of the College.

C. R. HODGSON, B.A., Secretary.  
Bloomsbury Square, W.C.

## COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

### LECTURES FOR TEACHERS.

A.—The First Course of Lectures (Thirty-sixth Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on "The Application of Psychology to the Work of the School," will commence on Thursday, February 13th, at 7 p.m.

The Course is meant to meet the needs of Teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the class-room. The Fee for the Course is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.  
Bloomsbury Square, W.C.

Well appointed Laboratories. Facilities for Research. Twenty Studentships open to free competition. Particulars on application to the SECRETARY.

## Messrs. TRUMAN & KNIGHTLEY,

Educational Agents,

6 HOLLES ST., CAVENDISH SQUARE,  
LONDON, W.

Telegrams—"TUTORESS, LONDON."  
Telephone—No. 1167 Mayfair.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

### A.—EMPLOYMENT DEPARTMENT.

#### (i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

#### (ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

#### (iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

### B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

### C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Prospectus, References, and full particulars will be forwarded on application.

#### JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Hours for interviews (preferably by appointment):—

11 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

#### SECONDHAND BOOKS AT HALF PRICES! NEW BOOKS AT 25% DISCOUNT!

BOOKS for A.C.P., L.C.P., F.C.P., Matric, University, Certificate, Scholarship, L.L.A., B.A., and ALL other Examinations supplied. State wants; send for List. Books sent on approval. **BOOKS BOUGHT**, good prices given.—W. & G. FOYLE, 135 Charing Cross Road, W.C.

#### THE JOINT SCHOLASTIC AGENCY.

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies:—

HEAD MASTERS' CONFERENCE.

INCORPORATED ASSOCIATION OF HEAD MASTERS.

COLLEGE OF PRECEPTORS. TEACHERS' GUILD.

INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

ASSOCIATION OF TECHNICAL INSTITUTIONS.

ASSOCIATION OF PREPARATORY SCHOOLS.

WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments.

The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION.

Interviews (preferably by appointment) 12 p.m.—1.30 p.m., and 3 p.m.—5.30 p.m. Saturdays, 12 p.m.—1 p.m.

CAN any Head Mistress recommend a young Lady as NURSERY GOVERNESS, who has just completed High School training; must have tact and common sense, and a love for children. Good Home, no Menial work.—Mrs. BAKER, Winterton, Doncaster.

#### THE ONLY EFFECTIVE METHOD

OF "WEIGHTING" AND LAYING THE

## DUST

(See the Official Memorandum on the Cleansing and Disinfecting of Schools)

Is to **USE FLORIGENE** (Regd.)

(Awarded BRONZE MEDAL of the ROYAL SANITARY INSTITUTE)

On all Wood, Linoleum, and other Floors in  
**SCHOOLS, LABORATORIES,**

Art Galleries, Libraries, Museums, &c.

**DURING EACH VACATION**

(THREE TIMES A YEAR ONLY IS NECESSARY).

"FLORIGENE" also Purifies the Atmosphere, Preserves Floors, Saves Labour, etc.

"FLORIGENE" is a fluid which can be easily and quickly used by the unskilled, and each application is generally effective for 2 to 4 months, or longer, according to the wear.

It is not sticky, but the dust and dirt absorb the "FLORIGENE" from the unimpregnated floors and thus become "weighted," so that when the floors are brushed in the usual manner, the sweepings do not rise, but roll in front of the broom.

**No Scrubbing or Sprinkling of Floors.**

**BOOKS, FURNITURE, APPARATUS, etc.,** seldom require dusting or cleaning.

"FLORIGENE" is an aid to the Prevention of Throat Irritations and School Epidemics.

The Cost is inconsiderable in relation to the HYGIENIC AND OTHER IMPORTANT ADVANTAGES.

For particulars, Reports, and Testimonials, write

**THE "DUST-ALLAYER" CO.,**

165 QUEEN VICTORIA ST., E.C. Contractors to H.M. Government, &c.

# THE BEST BOOKS FOR 1908

**Higher English.** By F. J. RAHTZ, M.A., Lecturer in English at Merchant Venturers' Technical College, Bristol. Second Edition. Crown 8vo, 3s. 6d.

A Text-book for the English section of the London Matriculation Examination.

**The Complete School Chemistry.** By F. N. OLDHAM, B.A., With 126 Illustrations. 4s. 6d. [*Text-Books of Science.*]

The object of this book is to provide a progressive but complete course in Practical and Theoretical Chemistry up to the standard of the London Matriculation.

In use at Bedford Grammar School, Dulwich College, Durham School, Loretto School, Nottingham High School, Wellington College.

**Nouvelle Grammaire Française.** By J. G. ANDERSON, B.A., Examiner to London University, the College of Preceptors, and the Welsh Intermediate Board. Crown 8vo, 2s.

**Exercices de Grammaire Française.** By J. G. ANDERSON, B.A. Crown 8vo, 1s. 6d.

A course for Matriculation Candidates who have been taught by the reform method.

**A Junior French Prose.** By R. R. N. BARON, M.A. Second Edition. Crown 8vo, 2s.

"We like this book very much; it is so sane and practical. The author has wisely avoided giving too much assistance, as is too often the case, by putting the notes in such a form as to leave practically nothing for the learner to do; altogether a really excellent book for the class or for the private student."—*Teachers' Times.*

**French Prose Composition.** By R. R. N. BARON, M.A. Crown 8vo, 2s. 6d. Key, 3s. net.

An advanced course on the same lines as the above.

**Easy Exercises in Algebra.** By W. S. BEARD. Containing 3,500 problems. Crown 8vo, with Answers, 1s. 9d.; without Answers, 1s. 6d.

**A Junior Geometry.** By NOEL S. LYDON, of Owen's School, Islington. With 276 Diagrams. Fifth Edition. Crown 8vo, 2s.

**An Easy Poetry Book.** Selected and arranged by W. WILLIAMSON, B.A., Author of "Dictation Passages." Crown 8vo, 1s.

[*The Beginners' Books.*]

A little book for pupils of twelve or thereabouts. It is believed that all the selections are as good as poetry, healthy and invigorating in thought, and suited to the capacity of beginners.

## METHUEN'S SIMPLIFIED FRENCH TEXTS

Edited by T. R. N. CROFTS, M.A., Modern Language Master at Merchant Taylors' School, London. Fcap. 8vo, 1s. each.

**L'Histoire d'une Tulipe.** Founded on "La Tulipe Noire," by A. DUMAS. Adapted by T. R. N. CROFTS, M.A.

**Abdallah;** ou, le Trèfle à Quatre Feuilles. By EDOUARD LABOULAYE. Adapted by J. A. WILSON.

**La Chanson de Roland.** Adapted by H. RIEU, M.A., Merchant Taylors' School, London.

**Mémoires de Cadichon.** Founded on "Mémoires d'un Âne," by Madame de SÉGUR. Adapted by J. F. RHOADES, Fettes College, Edinburgh.

**L'Equipage de la Belle Nivernaise.** Founded on "La Belle Nivernaise," by ALPHONSE DAUDET. Adapted by T. R. N. CROFTS, M.A.

**Le Docteur Mathéus.** Founded on "L'Illustre Docteur Mathéus," by ERCKMANN-CHATRIAN. Adapted by W. P. FULLER, M.A., University College School.

"An excellent idea and well carried out."—*Journal of Education.*

**A Junior Greek History.** By W. HORTON SPRAGGE, M.A., Assistant Master at the City of London School. With Maps and Illustrations. Crown 8vo, 2s. 6d. [*Methuen's Junior School Books.*]

This book describes the main features of the History of Greece down to the time of its absorption into the Roman Empire.

**A First History of Greece.** By E. E. FIRTH. With 7 Maps. 1s. 6d.

A History of Greece for Beginners, with Questions and Summaries.

**Stories from Roman History.** By E. M. WILMOT-BUXTON, Author of "Makers of Europe." Crown 8vo, 1s. 6d.

**Revision Notes on English History.** By F. WALLACE-HADRILL. Crown 8vo, 1s.

A chronological account of the leading events of English History, with general notes and genealogical tables on each reign.

METHUEN & CO., 36 Essex Street, London, W.C.

## THE School World.

## From WILLIAMS & NORGATE'S LIST OF SCHOOL BOOKS.

"Books to be strongly recommended."—*Educational Times*.

### EUGENE'S GRAMMAR, EXERCISES, and METHOD.

The Student's Comparative Grammar of the French Language. With an Historical Sketch of the Formation of French. For the Use of Public Schools. With Exercises. By G. EUGENE FARNACHT, late French Master, Westminster School. Twenty-first Edition, thoroughly revised. Square crown 8vo, cloth, 5s. Or separately, Grammar, 3s.; Exercises, 2s. 6d.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern as well as of ancient languages. . . . The rules and observations are all scientifically classified and explained. Mr. Eugene's book is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times*.

French Method. Elementary French Lessons. Easy Rules and Exercises preparatory to "The Student's Comparative French Grammar." By the same Author. Seventeenth Edition. Crown 8vo, cloth, 1s. 6d.

"Extremely well done."—*Educational Times*.

### HUGO'S LES MISÉRABLES.

Les Misérables. Les Principaux Episodes. Edited, with Life and Notes, by J. BOÏLLE, B.A., late Senior French Master, Dulwich College. Two Vols. Crown 8vo, cloth, each 3s. 6d.

"A worthy addition to our stock of French reading books, which will be welcomed by numberless masters. M. Boïlle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*The Journal of Education*.

"Make an admirable school book."—*Scotsman*.

### HUGO'S NOTRE-DAME.

Victor Hugo.—Notre-Dame de Paris. Adapted for the use of Schools and Colleges, by J. BOÏLLE, B.A., late Senior French Master, Dulwich College. Two Vols. Crown 8vo, cloth, each 3s.

READY. Crown 8vo, cloth, 3s.

### SCHOOL TEACHING AND SCHOOL REFORM.

By Sir OLIVER LODGE, Principal of the University of Birmingham.

"We heartily commend Sir Oliver Lodge's book to the teaching profession as a valuable, thoughtful, and inspiring contribution to the recent discussions on education."—*School*.

Boards, 6s. Twelfth Edition. Maps on Guards.

### NEW ATLAS ANTIQUUS.

Twelve Maps of the Ancient World for Schools and Colleges. By H. KIEPERT.

### MEDICAL INDOOR GYMNASTICS.

A System of Hygienic Exercises for Home Use. To be practised anywhere without Apparatus or Assistance. By D. G. M. SCHREIBER, M.D. Translated from the Twenty-sixth German Edition. Invaluable to both Teachers and Scholars. Demy 8vo, 3s. net. With large Plate and numerous Illustrations in the Text.

### WEISSE'S SHORT GUIDE TO GERMAN IDIOMS.

Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.

### FRENCH CLASSICS.

French Classics for English Students. Edited, with Introduction and Notes, by LEON DELBOS, M.A., of H.M.S. "Britannia," Dartmouth, late of King's College. Price per volume, paper boards, 9d.; cloth, 1s.

- |  |   |
|--|---|
| 1. Racine. Les Plaideurs.  | 9. Lafontaine. Fables.  |
| 2. Corneille. Horace.  | 10. Molière. Misanthrope. By G. H. CLARKE. 1s.  |
| 3. Corneille. Cinna.   | 11. Molière. Fourberies de Scapin. By G. H. CLARKE. 1s.   |
| 4. Molière. Le Bourgeois Gentilhomme.                              | 12. Chanson de Roland. Historical, Critical, and Grammatical Introduction. Three Passages with Explanatory Notes and an English Translation. By CLAUDE F. CONDELL. Sewed, 9d. |
| 5. Corneille. Le Cid.  |   |
| 6. Molière. Les Précieuses Ridicules.                              |   |
| 7. Chateaubriand. Voyages en Amérique.                             |   |

## The Educational Times.

"When Greek meets Greek."

THE Greek question is always with us and will not be put aside. It was the chief item on the agenda of the Head Masters' Conference held last week at Oxford, and, as Dr. James, of Rugby, who is prepared to die in the last ditch for Greek, complained, no sooner has he cut off one head of the Hydra of Philistinism than another springs up in its place. "One year it was from the side of the Universities that Greek was assailed; it was attacked last winter from the side of the entrance examinations, and now it was being attacked afresh from the side of scholarships." Do these repeated and hitherto unavailing assaults prove, as Dr. James would persuade us, the innate vitality of Greek, its indispensability as a factor of a liberal education; or do they rather show that tradition is deeply rooted, and that, though the axe is laid to the root of the tree, the topmost branches will be the last to feel the effect?

The Oxford debate does not assist us to answer the question. It leaves things *in statu quo*, and, so far, may be said to maintain the prerogative of Greek; but that is the invariable issue when any burning question is before the Head Masters' Conference. Like the Chancellor in Tennyson's "Princess," the Head Master "dangles with his chain, and smiling puts the question by." In this case he did not even think it worth while to refer it to a Committee.

Nor can Dr. James this time boast a signal victory. Ten head masters voted in favour of Dr. Burge's resolution, and sixteen voted against it. We know not how many masters abstained from voting, but the paucity of votes recorded can create no surprise. The resolution was a compromise, a sop thrown to the preparatory masters, and it can have pleased neither the thoroughgoing Greeks nor the thoroughgoing Trojans. It recommended in Entrance Scholarship examinations "lowering materially the standard of knowledge required in the Greek language," and this was interpreted by the proposer as an examination in Dr. Rutherford's Greek Primer, with translations from Greek into English and from English into Greek based on the textbook. It was objected by subsequent speakers that the remedy would be worse than the disease; that it would mean

a return to the old vicious classical method—the teaching of grammar and composition before reading; the dreary declensions and paradigms of the last century. Dean Colet was a better pedagogue than Dr. Burge when he wrote in the Introduction to his Latin Grammar: "Latin speech was before the rules, and not the rules before the Latin speech."

But the surprising thing in the debate is that no speaker (as far as reported) seems to have heard of the "reformed" system of classical teaching in Prussian schools—and that though two of the members were specially commissioned by the Board of Education to report upon its working. Had they studied these Reports they would have learnt that in the Frankfort Gymnasium, on the reformed plan, Greek is not begun before the fourth class from the top, that is, before the fifteenth year, while in the Realgymnasium Greek is not taught at all. Mr. Lyttelton, who seconded Dr. Burge, had an inkling of the truth when he spoke of the impossibility of learning three languages at once; but Dr. James in replying said he did not know what Mr. Lyttelton meant. The impossible had been achieved by Rugby scholars, and they loved their Latin and Greek on which they feasted at their preparatory school better than their French of which they had *quantum suff.* What these infant Mezzofantis knew of their mother tongue, of English history and geography, of the world around them, Dr. James did not tell us; but he opposed Mr. Lyttelton's proposal to substitute Greek history and geography at the public school to redress the balance of less Greek at the preparatory school.

The Oxford debate does not help us to answer the question we proposed at starting. It is a case of Greek meeting Greek—an intestine wrangle, not the tug of war. We are neither Greeks nor Trojans, but, as indifferent spectators, we may venture to arbitrate in the particular point at issue. The preparatory-school masters, who ought to know best, have almost with one voice pleaded for the abolition of Greek in entrance scholarships and examinations. We absolutely refuse to believe that the cause of Greek would suffer by the postponement of the study. And no half measures will serve. A little Greek is indeed a dangerous thing. Who is to define the little? Suppose the study of mathematics limited to arithmetic, it would be quite possible to set an arithmetic paper that would puzzle a wrangler. The one mortal sin of the public schools, as

Mr. Cotterill has lately reminded us, is their exclusiveness. So long as Greek wins scholarships it will be studied in the preparatory schools, and none but parents who can afford to send their sons to these expensive schools will win scholarships. It is a strange fortune that Greek, which first taught the world the virtue of isonomy, of free and equal citizenship, should have become the symbol of exclusiveness, the pass-word of an aristocracy of educators.

Strange, too, that such power should be vested in some half-dozen clerical head masters. Supposing the triumvirate who rule Eton, Winchester, and Rugby to agree that henceforward Greek should not be set in scholarship examinations, they would (as Dr. Hawkins said of Arnold when he was a candidate for Rugby) change the face of English education: they would have taken the first step towards democratizing our public schools.

### NOTES.

THE report of the British Association Committee on the Curricula of Secondary Schools derives importance from the names of the members of the Committee. Moreover, "the fact that the report is drafted in collaboration between teachers of classics and teachers of science, between representatives of Ancient schools and representatives of Modern ones," as Sir Oliver Lodge, the chairman, says, "ought to give it some value." Undoubtedly. The conclusions submitted by the Committee may be regarded as a first draft for further consideration, if educationists would but take it as a basis to build upon, instead of dispersing their energies in independent directions. On some points there will be hardly any disposition to disagree; on other points there will be a demand for ampler explanation and justification. The most fundamental point is placed last in the series, and it is a question, not of debate, but chiefly of ways and means: the affirmation that it is "urgent and imperative" that "teachers of learning and force of character" should be attracted to the profession "by conditions of appointment, by scale of salaries, and by retiring allowances." If it were a first-class battleship the money would be found in a moment; unhappily, the importance of a first-class intellectual fleet is not so readily grasped. All the same, it remains an inexorable fact that the teacher is the school, that the supply of adequate teachers depends upon the provision of adequate inducements, and that the intellectual efficiency of the country needs to be secured and maintained no less than the material interests, which are indeed essentially dependent upon the brains and sinews of the citizens.

Of course we need different types of secondary schools with different curricula or combinations of curricula, and the line of cleavage is marked by the ulterior objects of the pupils and the length of time they remain at school. The broad general course up to twelve years of age, which the Committee desiderate, requires exposition in some detail; probably the Committee found difficulty in proceeding beyond generalities; certainly the details are open to much discussion. "The most serious factor in secondary education at the present time" they find to be the crowding of subjects,

as if "the curriculum should be an abstract of all modern knowledge"; and Latin and Greek they regard as the worst obstructionists, at any rate "in many schools." Latin they would postpone till the age of twelve, as a "systematic" and "ordinary school subject"; what the "incidental" teaching of Latin before that age would amount to, even when given "by such means as will naturally occur to a fully qualified teacher of young boys," we do not essay to assess. There is much to be said for this postponement of Latin, as well as for the early commencement of one modern foreign language; and perhaps it is better not to specify one such language to the exclusion of others. The first tussle of importance must take place on the entrance examinations at the great public schools. There is room for difference also upon the subject of examinations; but probably there will be considerable sympathy with the Committee in deprecating "any uniform or centrally administered examinations applied to the schools of the country" as well as "anything like State-imposed rigidity in the organization and studies of secondary schools." On second thoughts we will repeat once more that the pressure so largely attributed to Latin and Greek may be greatly relieved by improved organization and methods, and to these the more progressive teachers have already begun to give active attention.

A REPRESENTATIVE of the *Morning Post* has interviewed the Rev. H. Wesley Dennis, Principal of St. John's College, Battersea, on the position of the Training Colleges under Mr. McKenna's new regulations. Mr. Dennis sets forth the following contrast between the effects of the regulations and of the Church's proposals:—

#### MR. MCKENNA'S REGULATIONS

1. Remove a supposed grievance by creating another far more real.
2. Do not add a single place to the accommodation for students in residential colleges, because for every Nonconformist admitted a Churchman is displaced.
3. They weaken, if not destroy, the unity and family life of the existing denominational colleges.
4. They introduce the elements of religious discord and seriously affect the internal arrangements and discipline.

#### THE CHURCH'S OFFER

1. Meets the grievance of the Nonconformist by the provision of hostels as described.
2. Adds at once to the accommodation for the training of students throughout the country.
3. Maintains the present unity and family life of the colleges, which have been proved to be so valuable for their highest work.
4. Offers a generous and peaceful solution of the difficulty while safeguarding existing arrangements and discipline.

"The late Minister of Education," adds Mr. Dennis, "frankly recognized these facts, and, as is known, expressed his approval of the solution proposed. We therefore feel that these regulations are peculiarly hard and unjust, because they are a complete reversal of the policy of the Board and of successive Governments, because they amount practically to a summons to the Church Training Colleges to break (or alter) their trusts or close their doors, and because they destroy the confidence in a public department, on the strength of which these colleges, especially in the last few years, have spent enormous sums of money in improving and extending their buildings." Mr. Dennis protests that he has every sympathy with the desire of Nonconformist students to enter a residential college, but does not think it

just "to call upon the Church to fling open the doors of her Colleges to these young people to the exclusion of those for whom she built her Colleges": "the remedy surely is to encourage the building of more Nonconformist or undenominational Colleges."

THE *Westminster Gazette*, on the other hand, commenting on the publication of the legal opinions in regard to the trust deeds of the National Society's Training Colleges, says they "are a most puzzling manifestation, both in their purpose and in their effect." Assuming the opinions to be good law, the situation is this:—

The managers, according to this opinion, enjoy full legal possession and control of these training colleges, and the Government is not entitled to lay down conditions in giving them grants, unless, of course, it passes an Act of Parliament overriding their trust deeds. But how have they grown up and at whose cost have they been carried on? . . . [Dr. Macnamara's] return shows us the proportion of public grants and subscriptions in Church of England colleges in two periods—first from 1839-62, second from 1863-1905. In the first period £165,668 was raised from voluntary subscriptions, £76,562 from students' fees, and £368,301 from Exchequer grants. In addition to these sums, £443,401 came from scholarships and capitation grants. Thus in this period only £165,668, out of a revenue of more than a million, came from voluntary subscriptions. In the second period £508,000 came from subscriptions, £19,000 from endowments, £488,000 from students' fees, and no less than £3,418,000 from Exchequer grants. By an overwhelming proportion, then, these colleges, to which the managers now tell us they cannot admit undenominational students, and for which they cannot even erect hostels, have been founded and carried on by public money. Yet their managers and the ecclesiastical authorities generally stand on their legal rights to confine residence in them to Church of England students, to keep the door shut as far as possible on other students, and to make it an act of grace when they even admit them from outside hostels and consent to provide for them from funds not their own.

Neither side, unfortunately, meets the other quite fully and squarely, yet both are fairly representative of the opposing attitudes. It seems but too obvious that the quarrel is less likely to be composed than to become further embittered.

On the practical side of the question of new Training Colleges, some criticisms made by Prof. Mark R. Wright, of Newcastle-on-Tyne, in his Presidential address at the annual meeting of the Training College Association, seem to be very well worth attention. Prof. Wright is reported (in summary) as follows:—

A reasonable system of education involved that the majority of teachers should be trained, and there must be an increase in training colleges. He regretted that colleges were rising in a sporadic way, and were due more to importunities of certain educational authorities and sects rather than to the needs of the country in particular areas. It was an error, and one which would be found increasingly difficult, to place the provision of the training colleges in the hands of the Local Authorities. He looked forward with some concern to the time when they might have some areas congested with training colleges while other areas would show a marked deficiency. It was the one piece of work which could have been done more efficiently by a central body.

Presumably each Local Authority will wish to retain the services of the teachers it trains, and no doubt this may be effected for a brief period by specific stipulations; but there appear to be probabilities of not a little difficulty and friction. The arrangement tends to postpone the establishment of a truly national system.

MR. WILLIAM CARTWRIGHT, the new Mayor of Lough-

borough, who started work at six years of age, who "never saw the inside of an elementary school," and is (as he says) "just an ordinary workman, working a machine that makes ladies' stockings," is well entitled to a hearing on the subject of continuation classes. An interviewer from *Lloyd's Weekly News* reports him thus:—

Everything depends on educating the workman. I think there ought to be compulsory attendance at evening schools and technical schools for boys and girls after leaving the elementary schools. As it is, the workman's child is generally taken away from school just as he is really beginning to learn and to make something of himself. The average child that I meet who has passed the sixth standard I find in a year or two after he has left school has forgotten most of what he knew. If all these boys and girls had to go to evening school three times a week I don't think it would press too hardly on them.

Mr. Cartwright learnt to read at a Sunday School, and then diligently taught himself. The Notts Manufacturing Company, his employers, gave a reception and entertainment at the Town Hall in honour of his mayoralty—a credit to themselves as well as an honour to their workman.

### LORD KELVIN.

LORD KELVIN OF LARGS (Sir William Thomson) died on December 17 in his eighty-fourth year. He was born in Belfast, where his father was teacher of mathematics in the Royal Academical Institution, on June 26, 1824; studied at Glasgow University; entered at Peterhouse, Cambridge, in 1839; was Second Wrangler and First Smith's Prizeman in 1845, and was at once made a Fellow of his college; was appointed Professor of Natural Philosophy in Glasgow University in 1846, and occupied the chair till 1899 (fifty-three years); and in 1904 was made Chancellor of the University. He published some three hundred important papers on scientific subjects, and several volumes of lectures and addresses. He collaborated with the late Prof. Tait of Edinburgh in the production of a "Treatise on Natural Philosophy" (1867) and of "Elements of Natural Philosophy" (1872). On every department of Physics, theoretical or applied, Lord Kelvin has left his mark: mathematics, mechanics, sound, light, heat, thermo-dynamics, magnetism, electricity, elasticity, telegraphy, electrical engineering, geology, astronomy, chemistry, and navigation; and notably the dynamical theory of heat, the doctrine of the dissipation of energy, the theory of the electric telegraph, and electrical and magnetic science generally, and navigation. His scientific conduct of the laying of the Atlantic Cables (1858 and 1866) included a number of most valuable inventions; and it may be said of his siphon recorder (1867) that it has made submarine telegraphy a commercial possibility, and that his depth-recorder revolutionized the methods of deep-sea sounding. His re-invention of the mariner's compass, his tide-predicting machine, and his set of tables (improving Sumner's) for finding the position of a ship at sea, are signal contributions to practical navigation. His electric balances for weighing electric currents, electrostatic voltmeters for measuring electrical potential differences of pressure, electric wattmeters for measuring electric power, and electric ergmeters for measuring electric energy—are they not to be found in every laboratory, electrical workshop, and electric station, monuments of genius in the application of mechanical and electrical principles to instruments of precision? And these are but samples of the fruitful activity of one of the most extraordinary of human brains. Orders and degrees are of no moment in such a case. Lord Kelvin was knighted in 1866, and elevated to the House of Lords in 1892. He was a Privy Councillor; an original member of the Order of Merit; President of the British Association in 1871; President of the Royal Society 1890-95; a member of many foreign orders and academies, and an honorary graduate of a dozen Universities. He leaves no successor to the title. He was buried in Westminster Abbey on December 23.

## SUMMARY OF THE MONTH.

THE ARCHBISHOP OF CANTERBURY has forwarded to Mr. McKenna a letter in which he intimates the conclusions to which the National Society has come in respect to the new Regulations for Training Colleges. These conclusions have been arrived at in consequence of legal opinion obtained regarding the admission of students to the training colleges of the Church of England under the new conditions. The legal opinion was obtained from Sir Robert Finlay, K.C., Mr. R. Younger, K.C., and Mr. E. W. Martelli. Counsel answered the questions put to them in respect to the National Society's training colleges to the following effect:

1. The admission of extra day students as to whose religious faith no questions are asked, and who do not avail themselves of the religious education or services of the college, would not involve a breach of duty of the Society.

2. In all cases where funds have been applied for providing boarding houses or hostels for undenominational students in connexion with colleges bound to teach the doctrines of the Church, this would be a misapplication of the funds of the college and in the nature of a breach of trust.

On receipt of these opinions, a meeting of those interested in the National Society's training colleges was held, and the following resolutions, amongst others, were passed, with a view to communicating them to Mr. McKenna:

That, even apart from fundamental questions of principle, the Church of England training colleges, having regard to the opinion of counsel, find it impossible to observe the new regulations as they stand without committing a breach of the obligations contained in the Trusts and Trust Deeds under which the colleges are held.

It is respectfully urged that the denominational character of the Church of England training colleges should be freely recognized by the Regulations of the Board of Education as heretofore so far as resident students are concerned.

THE Council of the Churchmen's Union has passed the following resolution:

That the Council of the Churchmen's Union, while duly appreciating the importance of denominational instruction, views with concern the disparagement of simple Bible teaching, and desires to emphasize the great value it attaches to the maintenance of this form of Christian instruction in the schools.

At a full meeting of the staff of Trinity College, Dublin, (December 14) summoned by the Provost, the following resolution was passed unanimously:

That, fully realizing the importance of a settlement of the University question, this meeting of the Staff of Trinity College and members of the Academic Council think it undesirable to express any opinion on proposals which have not yet been formulated as a Government Bill; but they think it right to reaffirm the declaration contained in the statement issued by the Executive Committee of the Dublin University Defence Committee in March, 1907, viz.: "Should the Government determine to introduce a measure which, while leaving to Trinity College and the University of Dublin their present independent and unsectarian character, would at the same time be acceptable to our Roman Catholic fellow-countrymen, it would be a matter of supreme satisfaction to all who are interested in higher education in Ireland and who desire a final settlement of the whole question. We for our part have confined ourselves to working out our own solution. We have not thought it our duty either to advocate or oppose any scheme for the satisfaction of the reasonable claims of Roman Catholics which does not interfere with our own development along undenominational lines."

MR. BIRRELL, speaking at Belfast, is reported to have described the existing system of Intermediate Education in Ireland as "a system of cram, cram, cram." Archbishop Walsh has since contended strongly that Mr. Birrell has been misinformed.

THE EARL OF CREWE, chairman of the governing body of the Imperial College of Science and Technology, has authorized the publication of the following communication:—"The governing body of the Imperial College of Science and Technology have appointed three standing committees—a Finance Committee (chairman, Sir Francis Mowatt), an Education Committee

(chairman, Mr. Arthur Acland), and a General Purposes Committee (chairman, Lord Halsbury). In addition, they have appointed two temporary committees—a Transfer Committee (chairman, Mr. Arthur Acland) and an Organization Committee (chairman, Mr. Gerald Balfour; vice-chairman, Sir William White). Matters relating to the transfer to the Imperial College of the constituent institutions, which, it has been arranged, shall take effect as from January 1 next, and to the transfer of land from the Exhibition Commissioners, have been referred to the Transfer Committee. The Organization Committee, to which have been referred matters relating to the future organization of the Imperial College, have appointed four sub-committees to consider questions arising under this head in relation to the following sciences or groups of sciences, viz.:—(1) Mining and metallurgy (chairman of the sub-committee, Sir Julius Wernher); (2) other branches of engineering (chairman, Sir John Wolfe Barry); (3) biological sciences (chairman, Sir Archibald Geikie); and (4) other pure and applied sciences (chairman, Sir Arthur Rücker). The governing body have authorized the appointment of persons, not members of the governing body, who are specially conversant with the sciences in question or with their industrial applications, as additional members of these sub-committees, which are now engaged in considering the questions referred to them. The governing body have also approved in principle the appointment of a principal officer of the Imperial College, and have referred the question of his title and functions to the Organization Committee."

A CONFERENCE of representatives of the London Chamber of Commerce, the University of London, and the Higher Education Committee of the London County Council, was held at the Education Offices of the Council, Victoria Embankment, to consider the advisability of approaching conjointly the Board of Education to obtain its greater recognition of commercial subjects in the regulations for higher elementary and secondary schools. The objects of the conference were discussed by Sir Albert K. Rollit, ex-president of the London Chamber of Commerce and chairman of its Commercial Education Committee; Sir A. W. Rücker, Principal of the University of London; Prof. H. J. Mackinder, Director of the London School of Economics and Political Science; Dr. Walmsley, Principal of the Northampton Institute; Dr. H. J. Spencer, Head Master of the University College School; Mr. G. N. Hooper, Mr. R. L. S. Tomalin, Mr. R. S. Fraser, members of the council of the London Chamber of Commerce and of its Commercial Education Committee; Mr. C. E. Town, secretary of the Commercial Education Department of the London Chamber of Commerce. There were also present in addition the members of the Higher Education Committee of the London County Council.

At the December meeting of the Manchester Education Committee, the following report was read:—

In order to ascertain how far the business firms of the city are co-operating with the committee in the work of the evening schools, inquiry has been made in all departments outside the Municipal School of Technology and Art as to the number of students in attendance whose fees have been paid by their employers. The result shows that, in all, thirty-five separate firms are paying the fees of one hundred and seventy-three employees during the present session. In order to sustain this co-operation of the employers, monthly reports are being furnished to the firms as to the attendance, progress, and conduct of each student whose fees they have paid. Monthly reports are also forwarded in respect of one hundred and ninety-two students in the employ of twenty-five separate firms which have not paid the fees of their employees, but which are desirous of being acquainted with their progress. In several cases the annual advances of salary of these employees are to a considerable extent dependent on their progress in the schools.

THE difficulty of dealing with the employment of children and young people in London has been brought before the London County Council by a report from the Representative Managers of the Elementary Schools. They say:—

The Representative Managers have been deeply concerned to see the wastage of our educational efforts, and the demoralization of many thousands of our young people, owing to the absence of any authoritative assistance and advice at the critical point of their lives, when they leave school. Many cannot find permanent employment; many drift into most unsuitable employments. There is a ready

market at good wages for the youth of both sexes between fourteen and eighteen, but in occupations which leave them stranded at the latter age, without any permanent employment, without a trade or profession, and thoroughly demoralized and spoilt as citizens. . . . We know it is the desire of managers and teachers to do all they can to help parents in placing their children in suitable employment; and many perform this service most satisfactorily, but even these often feel the need for the services of a wider organization to which cases could be referred. . . . The neglected problem is in 70,000 or 80,000 ordinary children of average ability, who leave school every year, drift into the first casual employment that is offered, and return on our hands at thirty-five or forty as "unemployed and unemployable," without a trade and without either the mental or physical stamina for real profitable work.

The report suggests that Associations should be formed, in every suitable area, of managers, teachers, employers and others, who should collect information and be able to advise as to suitable vacancies.

THE Joint Matriculation Board which directs and controls the Matriculation Examination of the Universities of Leeds, Liverpool, Manchester, and Sheffield, has issued its report for the year 1907. The Matriculation Examination was held twice, beginning on July 2 and September 10. The number of candidates in July was 1,294, of whom 705 passed; and in September was 438, of whom 179 passed. The corresponding figures in 1906 were 1,079 (with 573 passes); and 454 (with 188 passes). In July the Matriculation Examination was held as a form examination at twenty-five schools, which provided 264 of the 1,294 candidates for the Matriculation Examination. In July, 1906, the number of schools was 25, presenting 255 candidates. The Board has recommended for the award of scholarships for a number of Education Committees and for the award of various university (entrance and matriculation) scholarships. There has been a considerable increase in the number of candidates who take papers at the higher standard, and the Board has decided to allow persons who already hold a Matriculation Certificate, and have not yet entered one of the universities, to enter in a future examination for a limited number of subjects at the higher standard and to grant supplementary certificates to candidates who satisfy the examiners. The Board has appointed a Committee to draft a scheme for the inspection and examination of schools, and it has been assured by the Universities of their general approval of the objects of the proposal.

THE Conference of Head Masters of Secondary Schools was held at Magdalen College, Oxford (December 20, 21), Mr. C. E. Brownrigg, President. The Richmond case was discussed, on a motion by Dr. Gray, seconded by Dr. Gow, "suggesting to the Board of Education that, in the interests of the profession, they should take such steps as will give to assistant masters a more secure tenure of their positions." The motion was adopted. On the motion of Dr. Rendall, a resolution was carried, "deploring the action of the Board of Education in attempting, by way of administrative regulations and by differentiation of grants, to place all secondary schools under the direct control and management of county or municipal authorities, and to extinguish or supersede all governing bodies, whether constituted by scheme or otherwise, not subject to such control." On another motion by Dr. Rendall, "deploring the action of the Board of Education as tending, by way of administrative regulations and by differentiation of grants, to narrow the methods of religious teaching and worship in secondary schools within undenominational limits," sharp differences of opinion were manifested, but the resolution was carried by 34 votes to 6. A resolution moved by Dr. Burge and seconded by Canon Lyttelton, to the effect "that undue pressure is put upon boys at preparatory schools by the requirements of scholarship examinations at the public schools, and that, in the interests of education, the best remedy lies in lowering materially the standard of knowledge required in the Greek language," was defeated by 16 votes to 10. The abstentions from voting are significant. The British Association's report on Secondary Curricula was referred to the Committee with instructions to obtain the opinions of individual members, with a view to full discussion at next year's Conference.

THE Training College Association held its annual conference (Dec. 17) at the National Society's House, Westminster, under the chairmanship of Prof. Mark Wright (Newcastle-on-Tyne), the president. There was a large attendance. The con-

ference was attended on behalf of the Board of Education by Mr. Barnett (Chief Inspector for the Training of Teachers), Dr. Airy (Inspector of Training Colleges), Dr. Newman (Chief Medical Officer), and Dr. Eichholz (Assistant Medical Officer). The President, in the course of his address, referred to the General Report on the Instruction and Training of Pupil Teachers, 1903-7. Full of defects and limitations, the old system for more than half a century had supplied English schools with teachers, and it was for the succeeding years to settle whether the more liberal method as regards intellectual equipment outlined in the Bursar plan (involving a delay in beginning practical work) would compensate for the characteristic masterfulness and capacity in managing large classes so frequently seen among pupil teachers. He thought the figures as regards future supply would need revising. The conclusion he came to was, that a much smaller number of pupil teachers would supply the needs of the schools than the annual 21,000 estimated in the report, unless a definite step forward were taken in reducing the maximum number of scholars allowed to adult teachers. Reduction in the size of classes was the most urgent of school needs, especially in large towns. There must be an increase in training colleges; but it was an error, surely, to place the provision of training colleges in the hands of local authorities. It was the one piece of work which could have been done more efficiently by a central body. A discussion took place on "The Simplification and the Strengthening of the Training College Curricula." A motion by Prof. Adamson, "that this association earnestly deprecates any endeavour on the part of the Board of Education to impose a uniform system upon the training colleges, and respectfully emphasises the necessity, in the present experimental stage of training and under the great diversity of conditions, of allowing as much liberty and elasticity as possible to the various colleges," was carried unanimously without discussion. Sir Lauder Brunton gave an address on "Training Colleges and National Health."

THE first of the "Occasional Lectures" for the session at Bedford College for Women was given on November 28 by Dr. Walter Leaf on "Some Impressions of Persian Poetry." Dr. Leaf touched briefly on the main features of Persian literature, its saturation with Arabic thought and language, its vast extent, and its fullness of rhythm and music. Every Persian aims at being something of a poet, and, as prolixity is the national vice, it is not surprising to find that the number of their works, even of the first class only, is numbered by hundreds. To most English-speaking people Persian poetry is represented only by Omar Khayyam, who in his native land is known rather as an astronomer and mathematician than as a poet, and who owes his fame in the West to the matchless translation of FitzGerald. But the great national epic of Persia, the "Shahnama," is of a different character. It embodies the national consciousness and aspirations, and was written in the tenth century by Firdausi, at the command of an Afghan sultan, the Mahmud of whom Omar sings. Firdausi, like Homer, collected the scattered traditions of his nation and wove them into verse. To this task he devoted thirty-six years, and found sixty thousand couplets not too long. The thirteenth and fourteenth centuries were the golden age of Persian poetry, the representative names of the period being Sadi, Jalal-ud-Din, and Hafiz. Sadi was a student of men, Jalal-ud-Din a mystic, Hafiz first and foremost an artist; but all are penetrated with Sufi mysticism. The lecturer gave some account of the main features of Persian poetry, and of the difficulty of reconciling the sensuous extravagance of its tenets with the dry realism of the faith of Islam. In Persian thought intoxication of the senses is often sought as a path to spiritual exaltation, and the student of the West must be prepared to face this incongruity in the midst of much lyrical beauty. In conclusion, Dr. Leaf sketched the life of a Persian poetess of the nineteenth century, a martyr for the Bab religion, which arose in the early 'forties in Persia. The key of Persian poetry is mystical self-abandonment, "the pensive passion of the absolute"; and Persian poets are among the most consummate artists in words that the world has ever produced.

ON the eighty-fourth anniversary of the Birkbeck College, Lord Alverstone, President, in the chair, the prizes were distributed by Lord Collins. The Principal, Dr. G. Armitage-Smith, gave a brief account of the work of the session, which, he said, had been very satisfactory. There was a considerable increase in the number and attendances of students, and a great advance

had been shown in the standard of work and in examination results. During the session there were 2,066 students. A steady diminution had taken place in the classes of an elementary order, and students came better prepared than in former years and demanded a higher class of education. A healthy and vigorous tone pervaded the whole College. In conclusion, he stated that the College needed more accommodation, its usefulness being restricted on that account. On the motion of Sir Philip Magnus, M.P., seconded by Mr. Stuart Sankey, it was unanimously agreed:—"That this meeting records its satisfaction at the continued progress of the College and its numerous successes in the University and other examinations, and congratulates the council and staff thereon; it expresses the hope that the efforts now being made for the extension of the College buildings may be successful, so that the usefulness of the College may be no longer restricted, as at present, by inadequate accommodation."

THE prizes and certificates to students at the Northampton Polytechnic Institution (formerly "the Northampton Institute"), Clerkenwell, were distributed by the Duke of Connaught. Dr. R. Mullineux Walmsley (the Principal) read an abstract of the annual report, which showed that in the past year the work of the Institution had continued with increasing success. The chief development of the session has been the transfer of the technical optics department to the rooms of the British Horological Institute in Northampton Square. This has had the double effect of increasing the accommodation for the technical optics department and also of relieving the pressure, by further increased accommodation, in the electrical engineering department. With regard to the technical optics department, the new building provides an increased number of laboratories and workshops as well as class and lecture rooms; but the total accommodation so provided still falls very much short of the needs of the department, and therefore the necessity for the new building which has been under discussion for so long is still very urgent. The question of increased accommodation for the general work of the Institution is also very pressing.

THE feeling is growing among those connected with educational administration (says the *Aberdeen Free Press*) that the time has come for an examination of the various educational endowments and trusts which exist in different parts of Scotland. Twenty-five years ago the Educational Endowments (Scotland) Act was passed, and under that measure Commissioners were appointed who visited various towns and conducted inquiries into the local charities and trust funds of an educational nature. Reports were drawn up, and upon them were based schemes of amalgamation and reform. The Educational Trust in Aberdeen is the outcome of this inquiry, and it represents a consolidation of various small endowments, some of which had grown obsolete because of changed conditions. The Technical College in Glasgow was formed in the same way upon a scheme drawn up by the Commissioners. It embraces five separate endowments or institutions—Anderson's College, the "Young" Chair of Technical Chemistry in connexion with Anderson's College, the College of Science and Arts, Allen Glen's Institution, and the Atkinson Institution. The schemes prepared by the Commissioners were fitted to the circumstances of the time, and they undoubtedly effected much needed reforms and put a stop to much needless or out-of-date expenditure. In the twenty years or more, however, which have elapsed since the Commissioners made their investigations, many changes and developments have taken place in education. There are new Government grants, new schools, and new colleges of various kinds, and many are of opinion that the time has come for a new review of the educational endowments of the country. This view, it is understood, is held strongly by the authorities at the Scotch Education Office, and it is not unlikely that steps will shortly be taken to institute an inquiry, either by a Departmental Committee or otherwise, into the resources which are available for education, and into their proper correlation with the expenditure from public funds.

THE Dean of Christ Church has been unanimously elected Chairman of the Council of Lady Margaret Hall, Oxford, the office falling vacant owing to the recent resignation of the Warden of New College. The building fund which has been opened for the provision of a new library and dining-hall and more students' rooms now reaches £2,900. The council have decided that, if £4,000 can be raised by Easter, the work may be

begun, though at least £7,000 will be required in order to complete it. Extra space is urgently needed for both common rooms and students' rooms, applications for admission being now so numerous that students are already being accommodated in rooms near.

In a Memorandum on the teaching of History, the Scottish Education Department say:—

While urging the importance of introducing, from the very beginning of the systematic study of history, some idea not merely of sequence, but also of causal relation, we must never forget that the child's first interest in history arises from vivid and picturesque detail, and this system of attraction should never be lost sight of all through school life. There is a second line of historical study to which some little time should be given in the supplementary course, wherever possible, namely, the history of our principal colonies and of the footing gained by the Anglo-Saxon race in various parts of the world. The scope and to some extent the method of history teaching in any particular class of school must be ultimately determined by the normal leaving age of its people. If they cease attending at fourteen years of age, all considerations lead to the conclusion that Scottish history must form the main subject of systematic historical study. In conclusion, the memorandum states there are two main sides to historical study in schools. There is, first, that aspect which is most fully exemplified in the preparatory stage, the making acquaintance—for the most part in literary form, and as part of the study of literature—with the materials of history. The other side is the systematic treatment of history so as to exhibit events in their due proportion and proper connexion, with the view of approximating more and more closely as the study progresses to an adequate comprehension of the general movement of history.

#### UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

**Cambridge.** HISTORY repeats itself. A certain member of Caius was sent down for reasons which appeared to the authorities sufficient to justify the sentence.

The undergraduate portion of the College thought differently, and practically every available member of the institution turned out to swell the funeral procession which, in a dismally orderly fashion, escorted the victim to the station. Some colleges are lax, others are strict; but one thing is abundantly clear, and that is the fact that most colleges are dependent upon the pollman for the appearance of their balance-sheet, and any measure which alters the flow of freshmen from the greater schools requires the most careful thought.

Curiously enough, we have seen another example of a proctor becoming unpopular. Several years ago a proctor, who was also a Dean, incurred the wrath of men for his doings, but the unpopularity was hardly deserved. Those who knew the victim of the popular fury were convinced that the man was right and the mob was wrong; at any rate, some of his most active persecutors formed themselves into a body-guard to protect the official from the violence of the mob, which at one time looked dangerous. Nowadays a sense of humour seems to have arisen in the undergraduate breast, and Mr. West Watson has been escorted to church and elsewhere by a huge mob of well-behaved youths, who silently march alongside their victim, and compel him to read between the lines. Mr. Gardiner, the other proctor, has chivalrously put forward a defence of his colleague, and matters will probably straighten themselves out next term.

Archdeacon Cunningham is always original, always amusing, and generally convincing. His latest scheme is to utilize what he would probably consider as the "waste products of the polls." His idea, put into homely language, is that there is much room in the pollman, and that we put the wrong stuff into it. A few facts first. The pollman has to pass the General, which, as its name implies, exacts the minimum standard of "General" knowledge requisite for the Poll degree; this may be passed as early as the fourth term, though more usually the whole of the first two years is absorbed in getting up the work and getting through the ordeal. This leaves from five terms as a maximum to three or less as a minimum for "special"—i.e., directly useful or professional subjects.

The Archdeacon is bold. He says: "Make men attend a considerable number of lectures framed on the model of those delivered by the 'Extensionists.'" Perhaps one of these may kindle in the young mind some interest or intelligence, and then see what happens! The idea is that some one subject may stimulate the youth to further development, and then we are to

prepare a "special" to take him deeper still. It is a pretty idea, but, like many another pretty idea, it presupposes the moral perfection of man in general and the University man in particular. If attendance at lectures is to count, a somnolent mood will be cultivated; if knowledge is to be tested, we shall soon come back to the old examination system. And think of the lectures and the lecturers! At present, have we half-a-dozen men who can attract an audience without resorting to compulsory methods? Why do the coaches flourish if lecturers are all capable? And the fallacy of it all is to postulate that the passive reception of a prepared lecture, the blotting-paper method of getting in your facts, is any intellectual exercise whatever.

The great fallacy which seems to underlie the Cambridge system is founded on the maxim, "Knowledge is power"; rather, "Knowledge"—crude and undigested—"is weakness." Knowing how to know is all that is worth knowing.

But the Archdeacon is a wise person, and knows how to tickle the public; his semi-humorous proposal may bring into prominence many things which we make believe not to exist because our eyes cannot see them.

The announcement that the prize for Latin Essay is awarded to J. R. M. Butler does not look much in cold print; but when we reflect that the undergraduate in question was born late in the year 1890, was head boy of Harrow when others are satisfied with being in the lower fifth, won a major scholarship at Trinity two years before other people would think of trying for a minor one, then we feel inclined to congratulate the Master of Trinity and Mrs. Butler on giving a very practical example of the doctrine of heredity. Mr. Butler was grounded at a rising Cambridge school, under Mr. R. S. Goodchild, whose successes in public-school scholarships are known to all educationists.

Prof. Ridgeway, with his usual polemic erudition, on December 4 maintained the thesis that Sergi's theory of "the Mediterranean race" is untenable. The professor is quite unique. He is cleverer and more quarrelsome, more peacemaking and more human, than anybody else. No one wants to change him.

A new diploma in Anthropology is to be instituted. Qualifications: To have received instruction under the Board of Anthropological Studies for three terms and to have written a dissertation on the subject. Those whose who hunger for letters after their name rejoice in the opportunity of adding two more.

The Livingstone meeting on December 4 was a success. Time did not permit of the various speakers giving full rein to their eloquence. The Vice-Chancellor made an apt allusion when he suggested to the boys in the gallery that they should, fifty years hence, tell the future generation how the doings of fifty years ago were now being celebrated. Our coming Vice-Chancellors will do justice to the chair: Dr. Mason, Mr. Donaldson, Mr. Fitzpatrick, Colonel Caldwell, and, lastly, Prof. Howard Marsh. We shall not do badly.

We were sorry to lose the football match. In spite of the fact that we possess in Kenneth McLeod and R. McCosh probably the finest three-quarter and forward players of to-day, we were beaten by a better team.

THE annual report of King's College records a large increase in the number of graduates during the year. Degrees have been awarded to 56 students, while 107 passed the intermediate examinations. More students are reading for higher degrees, and the amount of research and advanced work is extending. The number of students who enter as internal students of the University continues to increase. The total number of students attending the College amounted to 2,593, while in the two schools and other departments there were 3,620 pupils. The evening class department has been reorganized and the staff strengthened; there are full courses in arts and science and classes in engineering, affording every opportunity to students who are unable to attend day classes to work for University degrees. The classes for teachers, carried on in conjunction with the London County Council, continue to be very largely attended, and prove of great value to the students. Some further accommodation has been provided for certain departments, and a considerable sum has been spent in renewing and adding to the equipment of the laboratories. The scheme for the incorporation of the College in the University of London has reached a further stage, and the draft of the Bill has been agreed upon. The appeal for funds has been issued, and some £21,000 has been raised, including £5,000 each from the Goldsmiths', the Clothworkers', and the Drapers' Companies.

## CORRESPONDENCE.

### THE COLLEGE LIBRARY.

To the Editor of "The Educational Times."

SIR,—May I appeal to members of the College on behalf of the Library? It is not that money is wanted: there is still some voted but unspent. The real difficulty is to find out what books are desired by members. There is a fair supply of works on history and geography calculated to meet the wants of teachers who wish to read beyond the limits of the text-books they are using in school.

Suggestions as to a similar extension of the Library in other departments would be welcome. Possibly some branches of science might be taken in hand. I should also be glad to know if there is any effective demand for extensive editions of Greek and Latin classics.—I am, Sir, &c.,  
H. W. EVE.

### THE EDUCATIONAL LADDER.

ABERDEEN UNIVERSITY.—Fullerton Scholarship in Mental Philosophy (£100 for two years): Cecil B. Simpson, M.A., Monquhitter.

CAMBRIDGE UNIVERSITY.—Jeremie Septuagint Prizes: (1) E. C. Dewick, B.A., St. John's; (2) A. E. Talbot, B.A., Emmanuel. Carus Greek Testament Prizes: For Bachelors, not awarded; for Undergraduates, L. S. Thornton, Emmanuel. Whewell Scholarships: (1) D. W. Ward, B.A., St. John's; (2) C. K. Webster, B.A., King's. N. de M. Bentwich, B.A., Trinity, has been re-elected to a Scholarship of £100. Members' Prizes: Latin Essay, James Ramsay Montagu Butler, Scholar of Trinity; English Essay, William N. Ewer, B.A., Scholar of Trinity. Crosse Scholarship: Fred Shipley Marsh, B.A., Selwyn. Clothworkers' Company's Exhibitions (£30 a year for three years, for non-collegiate students): W. Harvey and R. L. Hussey. Censor's Exhibition (Day Training College): I. R. Swallow.

CANTERBURY, KING'S SCHOOL.—Junior King's Scholarships: R. E. L. Beardsworth (for Mathematics), C. W. Kidson, F. L. Goad, all of the King's School. Probationer King's Scholarships: E. F. Smart (Miss Baker, Folkestone), K. Lawson-Williams (Mr. Hayman, Abbey School, Beckenham), R. G. Crosse (Grammar School, Faversham), H. N. Kerr (Mr. Faulkner, Purley), A. Sargent, Junior King's School, G. W. A. Todd (Mr. Brooksbank, Aysgarth), H. G. Kain (Miss Speare, Richmond Hill). Entrance Scholarships: E. J. Hodgson, for Mathematics (Rev. A. Hodgson, Astley Abbotts), H. J. Denham (Rev. C. Wood, Brighton), H. Spence (Junior King's School), K. Lawson-Williams (Abbey School, Beckenham), H. G. Kain (Miss Speare, Richmond Hill), A. B. Forsyth (King's School), R. C. Crowley (Junior King's School). House Scholarships: G. W. A. Todd (Mr. Brooksbank, Aysgarth), H. N. Kerr (Mr. Faulkner, Purley).

DURHAM UNIVERSITY.—Diploma in Theory and Practice of Teaching: Lillie Ditchburn, Elizabeth Dowsen, Laurence A. C. Edwards, Elsie C. Halford, Mirian Oliver, Olive L. Watson, (Armstrong College).

LONDON UNIVERSITY.—*University College*.—Slade Prize for Figure Composition (£25): Mark Symons.

*London School of Economics*.—Martin White Scholarships (£35 a year for two years): Percy Anstey and William C. Nixon. Hutchinson Medals for the best research of the year at the London School of Economics have been awarded to Miss V. M. Shillington, D.Sc. (Econ.) London, formerly of Girton College, Cambridge, for her thesis on "Anglo-Portuguese Relations, A.D. 1200-1509," and to Miss A. B. Wallis Chapman, D.Sc. (Econ.) London, formerly of Oxford, for her thesis on "Anglo-Portuguese Relations, 1509-1807."

*Bedford College for Women*.—Training Department Scholarship (£15): Miss P. Davison, B.A.

MANCHESTER UNIVERSITY.—Teachers' Certificates: Class I.—Stephen Butterworth, Frederick T. Cheetham, Tom P. Coleclough, Henry T. Coleclough, Allin Cottrell, Esther Crosland, Edith D. Johnson, Edith M. Kershaw, Eveline Oddie, Harriet N. Ormrod, Margaret A. Smith, Nellie Snape, Dora Southerst, Frank Thornley. Class II.—Arnold Allcott, Jesse Anderson, Alfred E. Bancroft, Ward A. Batley, Harold Bennett, John Broadbent, James F. Dawson, Thomas J. Dyke, John H. Hawkes, James S. Hill, Winifred Jackson, Ruth H. Jenkins, Alice Kenyon, Benjamin Llewellyn, Marion R. Longbottom, Mabel E. Marsh, Willy Mitchell, Bertha Moorfield, Florence Nightingale, Mary Riley, Harriet C. Rogers, Frederick Sanderson, Mary Viner, George

Williams, Norman M. Young, Winifred Wilson, Hugh B. Borland, Class III.—Harwood Butterworth, Henry Gorrard, Annie Isgorve, Evelyn G. Jones, John W. Jones, Ethel Kershaw, Ada Lee, Thomas Shaw, Mabel W. Stephens, Gertrude M. Walsh. The regulations prescribe that no student is awarded a First Class unless he obtains a high standard for practical teaching, and no name appears in the list unless the student has passed the examinations qualifying for a Manchester University Degree in Arts or Science.

OXFORD UNIVERSITY.—Senior Kennicott Scholarship: H. Segal Moses, B.A., non-collegiate; *proxime accessit* G. V. George Stonehouse, M.A. Exeter.

### OPEN COURT.

*Thay haif said . . .  
Quhat say thay?—Lat thame say!*

#### THE RICHMOND CASE: STRAY THOUGHTS SUGGESTED BY IT.

By GILBERT J. PASS, Craufurd College, Maidenhead.

The result of the Richmond Grammar School case must come as an unpleasant eye-opener to those teachers who have hitherto been living in a fool's paradise. The fact that they may be sent about their business without even the notice accorded to a domestic servant—that, indeed, a head master may, if it so please him, dismiss his assistant without any formal notice—is difficult to realize. It has been said that this is a matter which cuts both ways, and that if the principal need not give the assistant notice, the assistant, in his turn, may leave when he pleases. But a little reflection shows that this is not so. The head master, as the testimonial- and reference-giver, undoubtedly holds the whip hand. Two questions naturally arise out of this lawsuit. The first is: "Who are the responsible persons who have made such a position possible?" and, secondly: "How may such a state of affairs be rendered impossible in the future?"

The answers to both questions are simple: (1) "The assistants themselves," and (2) "By all teachers uniting together in one representative body."

One cannot fail to hold the mass of secondary teachers responsible for the present position, since their branch of the profession exhibits a chaotic muddle of disorganization. The elementary teachers, it is true, have their own organization in the National Union of Teachers, numbering some fifty thousand members, but the secondary teachers have no such body. There is, of course, the Incorporated Association of Assistant Masters—which in commendable fashion supplied the funds to take the Richmond case through the Courts—but unfortunately its membership is comparatively small and by no means representative of the great bulk of secondary teachers. Now it is this absence of a properly organized trade union that has allowed the present position to arise, and until some form of union comes into being these injustices are bound to happen.

The whole teaching profession ought to be welded into one composite whole; or, if this is impossible, owing to lack of sympathy between elementary and secondary teachers, then the secondary teachers should form their own union somewhat upon the lines of the N.U.T. Yet even here there is much difficulty, owing to the nonchalance of many of the teachers and the cliquishness of others. The masters in the big public schools—our "aristocracy," as it were, and to whom we look for our leaders—in a large number of cases stand aloof and hold out no helping hand to their less fortunate brethren in the smaller grammar and private schools; and until this clannishness is overcome, and all secondary teachers combine together to help one another, little or nothing can be accomplished. Members of other learned professions—solicitors, barristers, doctors—all have their trade unions, but the poor secondary teacher has none. Now the reasons for this are clearly (i.) the selfish aloofness of the great mass of teachers, (ii.) the lack of interest displayed by many who simply enter the profession *en passant*, to fill up a gap in the hopes of soon leaving it "to do something better"; (iii.) the fact that this is practically the only profession open to all comers.

The Registration scheme was to have removed these last two difficulties, but we all know what a conspicuous failure Column B has been. If a new scheme arise unlike the old one, and some equitable standard of qualifications be required, and if there is a trade union to fix the standard of wages according to these qualifications and experience, and to demand fair and proper

treatment for assistants—then we shall have the unwonted spectacle of the average assistant not only obtaining just enough to exist on in bachelor state, but (*mirabile dictu!*) earning a marrying wage, instead of having to take a tacit vow of celibacy as binding as that required on entering a monkish order, as many have to do on becoming members of our calling.

Yet this much-to-be-desired state of affairs can only be reached by union; best of all, a union of the whole profession, but it seems probable that this is an impossible counsel of perfection: for if the assistants in the larger schools show a dislike to combining with their brethren in the same boat—albeit they are travelling first class, while the smaller fry go steerage—how much more will they be offended at the thought of working in a common cause with elementary teachers, who are not, as a general rule, of the same social class as they? Indeed, the whole position from A to Z is disheartening, and, until it is bettered, we have nothing to hope for, except to sit down meekly with folded arms and submit to treatment that an ordinary domestic servant would not tolerate for a moment.

One other glimmer of hope remains to us in spite of past experience, and it is the new Registration Council. Perhaps the new body may have learnt the necessary lessons from the failure of the old, and may give to us a scheme which will meet with general approval: for this Council—if truly representative of all classes—will have an unique opportunity of uniting the entire profession.

But a good comprehensive scheme is absolutely essential: no "thing of shreds and patches" will do. It cannot be hoped that a scheme will be made which will at once clear the profession of all flotsam and jetsam: this must be a process which takes time, and what must be carefully avoided is doing injustice to those teachers who possess no so-called qualifications and yet have proved their competence in the past. By all means close the gate in the future to such as these by stating that, after a certain date, no one may enter the profession without certain minimum qualifications, which will tend to make ours a learned profession in fact as well as in name. And, at the same time, some attraction should be held out so that the average assistant may reasonably hope on entering the calling that, at no distant time and while still an assistant, he may be earning a marrying wage. This can be done in two ways: (1) by the Registration Council—instead of the proposed Trade Union—fixing the minimum wage according to qualifications, experience, and the arduousness of the work to be performed; (2) by forming some pension scheme, so that assistants may have hopes of a small competence in their old age, instead of the constant dread of having to spend the winter of their days in poverty.

This pension scheme is of great importance. Other countries, by taking a graduated percentage of the teachers' salaries, are able to grant small pensions to them when they retire; and it seems a great pity that England, the richest of all, cannot formulate some such scheme. Indeed, one cannot help thinking that the registration arrangements to come will be incomplete unless a plan of this kind is devised. Moreover, when one considers the old age endowment and pension scheme offered to teachers by a private insurance company, it seems strange that the country itself cannot introduce old-age pensions for members of our profession when the would-be pensioners subscribe the necessary capital.

But one great drawback to any far-reaching change such as this is the extraordinary apathy which the general public exhibit with regard to matters educational so long as no political-religious point arises. The average parent is blissfully ignorant as to the competence of the individual teachers who have charge of his children's upbringing; and it is no exaggeration to say that teachers—and especially those in boarding schools, where the home influence does not come in to any extent—have the power to make or mar the future lives of those left in their charge for any length of time. So that the matter of selecting competent men, of attracting the best material to the profession, is one of grave national importance, and every effort should be made to obtain the best and weed out the incompetent ones; for teachers, of all people, have a large share in the making of good or bad citizens and thus moulding the future welfare of the country.

It is apparent, then, that we can hope for no lasting improvement in the condition of our profession except by unity of action, whether this be brought about by our own efforts, backed up by public opinion, or by the new registration scheme: for of our calling there is no truer saying than "United we stand, divided we fall."

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

**BOOK-KEEPING.**

By CALDER, MARSHALL, SON & IBOTSON, Chartered Accountants. Containing 380 pp. Crown 8vo. Price **2s. 6d.** net.

"The book contains a mass of information, which is very clearly and concisely given, and the illustrations explaining the principles of book-keeping are short and to the point, and very effectively set forth. Two very valuable appendices are included, the first being a glossary of important definitions, and the second a series of questions, any one of which can be answered by reference to the text. We cannot too highly recommend this book."—*The Students' Telephone.*

**A FIRST GERMAN COURSE.**

By J. B. JOERG, B.A. Lond., and Bonn Universities, Army Class Master and Chief Modern Language Master at Dulwich College, and J. A. JOERG, Head of the Modern Side, Dulwich College. 192 pp., crown 8vo. Illustrated. Price **1s. 6d.**

This book for beginners is divided into three parts, so as to cover the work of one year of three terms. Each part again consists of ten lessons, each of which provides sufficient material for one week. The lessons contain Grammar with Exercises, Translations, Reading and Conversation Exercises. The Conversation Exercises are illustrated so as to furnish material for further conversation.

**A NEW FRENCH GRAMMAR.**

By R. H. ALLPRESS, M.A., Master of the Modern Side of the City of London School, and J. LAFFITTE, B. ès L., Principal French Master at the City of London School. Price **1s. 6d.**

"Admirable pictures are to be found in 'A New French Grammar,' by R. H. Allpress and J. Laffitte, who have taken pains to make the book interesting, combining a 'Reader' with 'Exercises.'"—*The Athenæum.*

"The book has been compiled with the utmost care; no points of elementary grammar have been omitted, and the series of exercises are practical and thorough. . . . The volume is illustrated, and its low price is remarkable. It is a work of very high merit."—*The Teacher.*

# CAMBRIDGE UNIVERSITY PRESS

**Inorganic Chemistry.** By E. I. LEWIS,  
B.A., B.Sc., Assistant Master at Oundle School.

Demy 8vo, 5s.

"As stated in the preface, this volume being designed to meet the requirements of a class of pupils, some of whom have been promoted from a lower chemistry class, and some of whom are beginners, is partly a revision and partly an introduction. Accordingly the elements of the subject are treated in a more advanced manner than is usual in chemistry text-books; and this is, at any rate, a strong justification for the issue of another book on a subject already well written up. . . . The book probably goes further than most schoolboys would go, but it has this distinct advantage—that it could well stand as an authority in the event of a pupil continuing the study of the subject at a technical college or university."—*Aberdeen Journal*.

**Electricity and Magnetism.** An Elementary Text-book, Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S., Director of the National Physical Laboratory.

Crown 8vo, 6s.

"Every schoolmaster and teacher who has under consideration the selection of a text-book for his better students should most certainly look into this book. The information is everywhere absolutely sound and reliable."—*Guardian*.

**Mechanics and Hydrostatics.** An Elementary Text-book, Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S.

Crown 8vo, 6s.  
Or in 3 Parts—  
Part I. Dynamics, 3s.  
Part II. Statics, 2s.  
Part III. Hydrostatics, 2s.

It has now come to be generally recognized that the most satisfactory method of teaching the Natural Sciences is by experiments which can be performed by the learners themselves. In consequence many teachers have arranged for their pupils courses of practical instruction designed to illustrate the fundamental principles of the subject they teach. The portion of this book designated "Experiments" was for the most part in use for some time as a Practical Course for Medical Students at the Cavendish Laboratory at Cambridge. The rest of the book contains the explanation of the theory of those experiments, and an account of the deductions from them. It is with the hope of extending some such system as this in colleges and schools that the author has undertaken the publication of the present book and others of the Series.

**Heat and Light.** An Elementary Text-book, Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S.

Crown 8vo, 5s.  
Or in 2 Parts—  
Heat, 3s.  
Light, 3s.

"Mr. Glazebrook's volumes on Heat and Light deal with these subjects from the experimental side, and it is difficult to admire sufficiently the ingenuity and simplicity of many of the experiments without losing sight of the skill and judgment with which they are arranged."—*Saturday Review*.

## College of Preceptors Examinations, Midsummer and Christmas, 1908.

### The Pitt Press Shakespeare for Schools.

With Introduction, Notes, and Glossary by A. W. VERITY, M.A.

**Shakespeare.—The Merchant of Venice.** Seventh Edition. 1s. 6d.

**Shakespeare.—Julius Caesar.** Ninth Edition. 1s. 6d.

"A perfect schoolboy's edition."—*School Guardian*.

"Another of Mr. Verity's admirable school editions of Shakespeare's plays."—*Guardian*.

### The Cambridge School History of England.

**History of England for use in Schools.** By ARTHUR D. INNES, M.A., formerly Scholar of Oriel College, Oxford. In One Volume with 13 Maps and 8 Plans. Also in Three Parts: Part I., to 1509 A.D.; Part II., 1509–1714; Part III., 1689–1901.

Crown 8vo.  
Complete, 4s. 6d.  
Parts, 2s. each.

"A work of conspicuous merit and unquestionable value. . . . Though intended for the advanced forms of schools, it is well adapted for the private use of all manner of students, and, while never losing sight of the necessity of passing examinations, Mr. Innes has endeavoured to interest and guide the student rather than to cram him. His aim is comprehensive; for he seeks not merely to give an accurate chronicle, but to present history in its various aspects, constitutional, social, international, and biographical."—*Scotsman*.

## SOME TEXT-BOOKS ISSUED

### DURING THE YEAR 1907.

*A Course in German, written with a view to enabling Candidates for London University B.Sc. Examination and other Science Students to acquire a working knowledge of German.*

**SCIENCE GERMAN COURSE.** By C. W. PAGET-MOPFATT, M.A. Lond., M.B., B.C. Camb. 3s. 6d.

*A Text-Book of Elementary Botany, arranged for Modern Methods of Teaching.*

**PLANT BIOLOGY.** By F. CAVERS, D.Sc. Lond., F.L.S., A.R.C.S., Professor of Botany at the Hartley University College, Southampton. 3s. 6d.

*A full and complete Course of Practical Work in Physics for use in Secondary Schools, Technical Schools, and Colleges.*

**PRACTICAL PHYSICS.** By W. R. BOWER, A.R.C.S., Fellow of the Physical Society, Head of the Department of Physics and Electrical Engineering, Technical College, Huddersfield, and JOHN SATTERLY, B.Sc. 4s. 6d.

*Suitable for general use in Training Colleges, Secondary Schools, and the higher standards of Elementary Schools.*

**AN ANTHOLOGY OF ENGLISH VERSE.** Edited with Introduction and Glossary, by A. J. WYATT, M.A., and S. E. GOGGIN, B.A. Lond. 2s.

*An account of the structure and use of the Vocal Organs, and the means of acquiring Distinct Articulation.*

**VOICE TRAINING IN SPEECH AND SONG.** By H. H. HULBERT, M.A. Oxon., M.R.C.S., L.R.C.P., Lecturer on Voice Production and Physical Education at the London Day Training College. 1s. 6d.

*A Complete Course of Instruction in the Theory and Practice of Perspective Drawing, arranged to meet the requirements of the Syllabus of the Board of Education, and of similar Examinations.*

**PERSPECTIVE DRAWING.** By S. POLAK, Lecturer in Art under the London County Council. 5s.

*Suitable for the Examinations of the City and Guilds of London, and the Board of Education, &c.*

**TECHNICAL ELECTRICITY.** By Prof. H. T. DAVIDGE, B.Sc., and R. W. HUTCHINSON, B.Sc. 4s. 6d.

*An edition for School use of the "Tutorial Arithmetic," the portions dealing with the "Higher Theory of Arithmetic" being omitted.*

**THE SCHOOL ARITHMETIC.** By W. P. WORKMAN, M.A., B.Sc. Second Edition. In One Volume, 3s. 6d. Part I, 2s.; Part II, 2s.

*A Complete School Course of Coordinated, Theoretical, and Practical Work in Physics.*

**THE NEW MATRICULATION HEAT; THE NEW MATRICULATION LIGHT; THE NEW MATRICULATION SOUND.** By R. W. STEWART, D.Sc. In three Vols. 2s. 6d. each.

The course of work is arranged in accordance with the best modern methods. Wherever possible the theory is developed from experiments which require only simple apparatus and can be performed by the students themselves. The diagrams, which are clear, instructive, and easily reproduced, form a distinctive feature of the books.

*Containing the "Salient Facts" of English History, as required in the English paper at London Matriculation.*

**GROUNDWORK OF ENGLISH HISTORY.** By M. E. CARTER, Somerville College, Oxford. First Class Honours in Modern History. 2s.

*Specially written for Stages I. and II. of the latest Syllabus of the Board of Education for Subject XI. P.*

**SYSTEMATIC PRACTICAL ORGANIC CHEMISTRY.** By G. M. NORMAN, B.Sc., A.R.C.Sc., F.C.S., Head of the Chemical Department, Technical School, Bury, Lancs. 1s. 6d.

London: W. B. CLIVE, University Tutorial Press,  
157 Drury Lane, W.C.

## CURRENT EVENTS.

**Fixtures.** THE Sixth Winter Meeting for Teachers, conducted by the College of Preceptors, will be held at the College on January 6 to 15. The programme includes lectures on the principles and practice of education and on methods of teaching various school subjects, as well as visits to educational institutions.

THE Half-yearly General Meeting of the members of the College of Preceptors will take place on Saturday, January 25.

THE Annual General Meeting of the Incorporated Association of Head Masters of England and Wales will be held at the Guildhall, London, on January 10.

THE Annual General Meeting of the Incorporated Association of Assistant Masters in Secondary Schools will be held at Merchant Taylors' School, Charterhouse Square, E.C., on January 10. A paper will be read by Prof. M. E. Sadler, entitled, "Should Secondary Teachers be Civil Servants?" Open to members of all educational associations.

THE Annual General Meeting of the Incorporated Association of Assistant Mistresses in Public Secondary Schools will be held on January 11 at Dr. Williams's Library, Gordon Square, W.C.

THE Annual General Meeting of the Private Schools Association will be held at the College of Preceptors on January 10.

THE Annual General Meeting of the Modern Language Association will be held in London on January 7 and 8.

THE Annual General Meeting of the English Association will be held at University College, London, on January 10 and 11.

THE Annual Meeting of the Geographical Association will be held at University College, London, on Wednesday, January 8.

A COURSE of lectures on "The Historical Study of the English Language" will be given by Mr. P. G. Thomas, M.A., on Saturdays at 10.30 a.m., beginning January 18. Free to teachers in London schools. Apply, for permission to attend, to the Executive Officer, Education Offices, Victoria Embankment, W.C.

THE Lees and Raper Memorial Lecture, 1908, will be delivered in the Town Hall, Oxford, by Mr. William McAdam Eccles, M.S., F.R.C.S., on February 4, at 8 p.m. Subject: "The Relation of Alcohol to Physical Deterioration and National Efficiency."

THE second term of the year's special courses for foreign students at the University of Rennes commences on March 1. Apply to the Secretary to L'Entente Cordiale, 6 Fig Tree Court, Temple, E.C.

THE Nobel Prizes (£7,620 each) have been awarded as follows: Literature, Mr. Rudyard Kipling; Physics, Prof. Michelson (Chicago); Chemistry, Dr. Buchner (Berlin); Medicine, Dr. Laveran (Paris); Peace, Signor Ernesto Theodoro Moneta (Italy) and M. Louis Renault (France).

THE Prince of Wales has been elected an honorary member of the Royal Irish Academy.

LORD CURZON has been elected to an honorary Fellowship at Balliol College, Oxford.

OXFORD UNIVERSITY has conferred the honorary degree of M.A. upon Mr. F. H. Wright, Registrar of University College, Reading.

THE University of Cambridge has conferred the honorary degree of M.A. upon Mr. Sidney Herbert Ray, Assistant Master at St. Olga Street Council Schools, Bethnal Green, in recognition of his study of Oceanic languages. The Public Orator introduced him as an expert in the languages of New Guinea and North Australia, and of the Melanesian and Polynesian Islands.—Also upon Mr. H. D. Hazeltine, Reader in English Law.

THE University of St. Andrews has resolved to confer the honorary degree of LL.D. upon the following scholars on February 16:—Lord Avebury; Mr. Francis Darwin, President-Elect of the British Association; Mr. Philip Norman, Treasurer of the Society of Antiquaries; Sir E. J. Poynter, Bart., President of the Royal Academy; Mr. Charles Hercules Read, Past President of the Anthropological Institute; and Principal MacAlister, Glasgow.

THE Baly Medal of the Royal College of Physicians for Physiological Research has been awarded to Prof. Starling, University of London, University College.

THE Munich Academy of Science has elected as corresponding members Prof. J. J. Thomson, Cambridge, and Prof. Gibbert, of the Geographical Survey, Washington.

DR. J. A. H. MURRAY, the lexicographer, has been elected an Honorary Fellow of the Royal Society of Edinburgh.

It is proposed to present his portrait to Dr. Selwyn, the retiring Head Master of Uppingham. Contributions are received by Mr. R. H. Lloyd, Trinity College, Oxford.

DR. ARTHUR J. EVANS, Keeper of the Ashmolean Museum, Oxford, has been presented with his portrait. The portrait, which was painted by Sir William Richmond, R.A., has been accepted by the University.

THE MOST REV. WILLIAM ALEXANDER, D.D., Archbishop of Armagh and Primate of All Ireland, has been elected an Honorary Fellow of Brasenose College, Oxford.

THE status of Emeritus Professor has been conferred upon Mr. Louis C. Miall, D.Sc., F.R.S., and Mr. Charles J. Wright, M.Sc., M.R.C.S., by the University of Leeds, on their retirement from the chairs of Biology and Midwifery.

THE Lalande Prize has been awarded by the French Academy to Mr. Thomas Lewis, F.R.A.S., of the Royal Observatory, Greenwich, and one of the secretaries of the Royal Astronomical Society, for his great work on the measures of double stars, which forms the fifty-sixth volume of the "Memoirs" of the Royal Astronomical Society. The last time this medal was given to an Englishman was in 1880, when it was awarded to Stone for his Cape General Catalogue.

THE late Prof. Barker has bequeathed to the University of Manchester his microscope and all his botanical works and herbarium for use in the Botanical Department; all his mathematical and general scientific works, and all his other property (subject to certain life annuities and a few personal bequests) upon trust (1) to found a Professorship of Cryptogamic Botany, and (2) to found bursaries or scholarships in the departments of Mathematics and Botany. On the falling in of the several annuities, and after payment of the legacy duty, a net sum of about £36,000 will be available.

By the death of Lady Pearce on Christmas Eve, the fortune of the late Sir W. G. Pearce—some £400,000—passes to Trinity College, Cambridge.

LORD NEWLANDS has given £10,000 to provide additional income for the Snell Exhibitioners from Glasgow University at Balliol College, Oxford.

MRS. ANNIE FULTON, widow of the late Alderman Fulton, Cardiff, has left over £30,000 for charities, education, and religious purposes; and a considerable part of the sum will go to the buildings and professorships of Cardiff University College.

MR. HENRY RUTSON, of Newby Wiske, Northallerton, has given £1,000 to the University of Leeds to found a scholarship in memory of his late brother, Mr. John Rutson.

LORD CALTHORPE has given the University of Birmingham a valuable piece of land for a recreation ground (say £15,000). He previously gave the land on which the Bournbrook buildings stand (27 acres, worth £20,000).

MR. EDRIC BAYLEY, late Chairman of the Governing Body, has given £5,000 to clear off the debt on the building extensions at the Borough Polytechnic Institute.

THE late Mr. Mark Stirrup, of Bowdon, has left £1,500 for a Scholarship in Palæontology at Manchester University.

MRS. PHILLIPS, of St. Leonards-on-Sea, has given £1,000 to Burnley Grammar School to found a scholarship at Manchester University in memory of her late husband, who had attended the school as a boy and became one of its governors.

MR. H. A. FRANKLIN, of Ladbroke Grove, Notting Hill, W., has left £1,000 to the Jews' College for a Franklin Scholarship, and directed that after his wife's death £1,000 shall go to the Jews' College to found another Franklin

Scholarship. He has also left £1,000 to the London Jews' Free School, and £1,000 to the Manchester Jews' Free School.

\* \* \*

MR. ALEXANDER GILLANDERS, a late Custom House officer, has left £500 to Aberdeen University for a medical bursary or medal.

**Scholarships  
and Prizes.**

At Oxford University, scholarships, exhibitions, &c., are offered in Classics at Jesus College, January 14; at Exeter, Jesus, and Pembroke, February 5; and at New, Magdalen, and Corpus Christi, March 17. In Mathematics, at Magdalen, Brasenose, Christ Church, and Worcester, March 3. In Natural Science, at Jesus, January 14; Keble, March 10; Merton, New, and Corpus Christi, March 17. In History, at Merton and Brasenose, January 11; Jesus, January 14; Exeter, March 17.

\* \* \*

At Cambridge University, 6 Stewart of Rannoch Scholarships, £25 each for 3 years, will be offered in May to natives of the counties of Wilts, Somerset, and Gloucester (including the city and county of Bristol)—2 for Hebrew, 2 for Greek and Latin, 2 for Sacred Music. Also open scholarships—2 in Hebrew and 2 in Sacred Music. Age limit, twenty-one or twenty-two. Regulations from the Registry.

Magdalene College offers 4 scholarships (£80 to £40 a year) and 2 or more exhibitions (say £30 a year, £25 for organist) for Classics, Mathematics, Modern History, and Mechanical Sciences. Examination, March 17 and 18. Age, under nineteen. Certificates of age and character to the Master or the tutor (Mr. A. G. Peskett) by March 1.

Downing College offers minor scholarships in Law, History, and Natural Science, not exceeding £50 for one year (after which holders can compete for foundation scholarships, £50 to £80). Age, under nineteen; but no age limit in Law and History. Subjects and certificates of character to Mr. Henry Jackson, the tutor, by February 25.

Selwyn College offers Entrance Scholarships and Exhibitions for Classics, Mathematics, and Natural Sciences, on March 17. Particulars from the Master.

\* \* \*

L'ENTENTE CORDIALE offers two scholarships, £20 each, to candidates (of either sex) from University colleges. Examination, May 16, conducted by the Society of French Professors in England.

\* \* \*

THE Royal Meteorological Society offers three prizes (£5, £3, £2) to "elementary teachers and others" for "essays in the form of an original Nature-study Lesson on weather or climate not exceeding 1,500 words in length), together with a brief synopsis of five other Lessons to cover the whole subject of climate and weather." Essays to reach Mr. William Marriot, Assistant Secretary to the Society, 70 Victoria Street, S.W., by January 31.

**Appointments  
and Vacancies**

THE REV. ARTHUR H. JOHNSON, M.A., Fellow of All Souls College, Oxford, has been appointed Ford's Lecturer in English History for 1908-9.

\* \* \*

THE REV. CANON SCOTT HOLLAND, M.A., D.Litt., has been appointed Romanes Lecturer at Oxford for 1908.

\* \* \*

MR. W. BATEMAN, M.A., Fellow of St. John's, has been appointed Reader in Zoology, Cambridge University.

MR. E. T. CAMPAGNAC, M.A., H.M.I.S., has been appointed to the Chair of Education in Liverpool University.

\* \* \*

MR. C. E. D. DAVIES, B.A. Cantab., has been appointed Lecturer in Constitutional and Comparative Law in the University College of Wales, Aberystwyth.

\* \* \*

DR. WILFRID PERRETT, B.A., Ph.D., has been appointed Reader in German in the University of London.

\* \* \*

MR. RICHARD H. WALTHER has been appointed to the Professorship of Music at Queen's College, London, vacant by the death of Prof. Henry Gadsby.

\* \* \*

MR. D. H. MACGREGOR, M.A., has been appointed Assistant in Political Economy at the University of London, University College.

\* \* \*

MR. JULIUS FREUND, M.A., Ph.D., Lecturer in German Language and Literature, University of St. Andrews, has been appointed Professor of German in the University of Sheffield.

\* \* \*

MR. W. ALLAN, M.A., B.Sc. Edin., has been appointed Vice-Principal of the Elsenberg Agricultural College, Cape Colony.

\* \* \*

MR. T. S. PATTERSON, B.Sc., Ph.D., has been appointed Lecturer in Organic Chemistry in Glasgow University.

\* \* \*

MR. E. J. THOMAS, M.A., Lecturer in Greek and Latin, Bangor University College, has resigned his post to accept an appointment on the editorial staff of the Cambridge University Press.

\* \* \*

THE Morton-Summer Lectureship in Geology and Geography at Bedford College for Women (University of London) has been offered to Miss C. Raisin, D.Sc. A Lecturer in Botany, who will be head of the Department, will be appointed in February.

\* \* \*

MISS ALICE PATERSON, M.A. Edin., Ph.D. Jena, assistant mistress St. Paul's Girls' School, Hammersmith, has been appointed Lady Assistant Lecturer and Tutor to the Women Students in the Day Training Department, University College, Bangor.

\* \* \*

MR. ALBERT W. PRIESTLEY, M.A., B.C.L., B.Sc., Inspector of Elementary Education for the East Riding County Council, has been appointed Director of Education for the Worcester County Council.

\* \* \*

MR. ANDREW JOHNS has been appointed Secretary to the Gillingham Education Committee.

\* \* \*

MR. STEPHEN R. N. BRADLY, M.A. Cantab., Bedford Modern School, has been appointed Head Master of Fareham School.

\* \* \*

MR. HARALD STEPHEN CHURCH, B.A. Cantab., St. Michael's School, Westgate, has been appointed Head Master of Eilerslie School, Fremington.

\* \* \*

THE REV. HORACE GRAY, M.A. Cantab., Head Master of the Kendal Grammar School, has been appointed Head Master of the Grammar School, Warrington.

MR. WILLIAM STEVENS LEE, M.A. Oxon., Dover College, has been appointed Head Master of Cranbrook Grammar School.

\* \* \*

MR. WALTER ROBERT LEWIS, B.A. Cantab., and Francis H. Simpson, M.A. Oxon., Dulwich College Preparatory School, have become joint Head Masters of St. John's House School, Rosslyn Hill, N.W.

\* \* \*

MR. GEORGE LINDLEY, B.A. Irel., Simon Langton School, Canterbury, has been appointed Head Master of Spilsby Grammar School.

\* \* \*

MR. S. A. MOOR, M.A. Cantab., Head Master of Nantwich Grammar School, has been appointed Head Master of Kendal Grammar School.

\* \* \*

MR. EDGAR T. S. TADMAN, B.A. Lond., Second Master, King Edward VI. Modern School, Macclesfield, has been appointed Head Master.

\* \* \*

DR. W. H. ECCLES, head of the joint Mathematical and Physical Departments at the South Western Polytechnic, has been appointed Head of the Department of Mathematics; and Mr. Louis Lownds, B.Sc., Ph.D., has been appointed Head of the Department of Physics.

\* \* \*

THE Rectorship of Kilmarnock Academy is vacant through the death of Mr. David Murray, M.A., B.Sc.

\* \* \*

DR. A. B. YOUNG, M.A. Cantab. and Cape, Ph.D. Freib., has been appointed an Assistant Master at Christ's College, Finchley, N.

\* \* \*

MR. G. R. H. NICHOLSON, B.A., has been appointed Assistant Master at Kingswood School, Bath.

—•••—

**Literary Items.** A LIFE of Lord Kelvin, by Prof. Silvanus Thompson, will be published in the course of the year by Messrs. Macmillan. Lord Kelvin himself furnished numerous biographical details and other matter.

\* \* \*

THE Board of Education has issued a pamphlet, "How to become a Teacher in a Public Elementary School," giving complete particulars as to the conditions of recognition of teachers in all capacities, and supplying information on all the points that are most frequently raised by teachers or intending teachers in letters they address to the Board (4d., Wyman).

\* \* \*

THE *Preparatory Schools Review* for December, with much other excellent matter, furnishes an instructive "record of the physical examination of one thousand boys at their entrance on public-school life," by Dr. Dukes, Physician to Rugby School.

—•••—

**General.** THE director of the municipal Friedrichs Gymnasium has obtained the authorization of the Berlin Common Council to make English a compulsory subject for "Obersecunda," corresponding to the fourth form in an English public school, from next year. French, which has hitherto been compulsory, will take the place of English as a facultative subject.

HERR GUSTAV SPILLER (Spandauer Strasse, 40 Schmargendorf, bei Berlin) is organizing, on behalf of the International Union of Ethical Societies, an International Moral Education Congress, to be held in London in September.

\* \* \*

THE "Famulus" of Terence, the Westminster play of the year, has been performed with great success. It is some fifty years since its previous performance at Westminster.

\* \* \*

MORE HOUSE, the first of the collegiate halls or residences for students attending the University of London, which has been erected in the remnant of Sir Thomas More's garden, at Cheyne Walk, Chelsea, was opened (Dec. 11) by Sir Arthur Rucker, the Principal of the University.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on December 14. Present: Dr. Wormell, President, in the chair; Prof. Adams, Prof. Adamson, Dr. Armitage Smith, Mr. E. A. Butler, Mr. Easterbrook, Mr. Eve, Mr. Hawe, Mr. Kelland, Mr. Ladell, Miss Lawford, Dr. Maples, Mr. Millar Inglis, Dr. Moody, Mr. Morgan, Miss Punnett, Mr. Rule, Mr. Rushbrooke, Mr. Starbuck, Mr. Vincent, and Mr. White.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Christmas Certificate and Lower Forms Examinations had been held on December 3 to 6, and that the number of candidates was about 7,600. For the Christmas Examination of Teachers for Diplomas the number of entries was about 540.

The Diploma of Associate was granted to Mr. G. C. Rogers, who had satisfied the prescribed conditions.

Mr. Millar Inglis was appointed to serve as one of the representatives of the College on the Federal Council in place of Mr. Kelland, resigned.

Prof. J. Adams was appointed to deliver the Psychology Course of Lectures to Teachers in 1908.

Saturday, January 25, was fixed as the date of the next Ordinary General Meeting of the members of the College.

The representatives of the College presented a report of the proceedings of the Federal Council at a special meeting held on December 11, at which the question of registration had been considered. At this meeting resolutions had been adopted recommending that the Registration Council to be formed under the provisions of the Education (Administrative Provisions) Act of 1907 should be constituted in equal proportions of nine representatives of Elementary, Secondary, and Technological Education, respectively, and nominees of the Crown, and that one third of each of the four groups should consist of women. The representatives of the College felt themselves obliged to dissent from the detailed proposal with regard to the method of the composition of the Council, but concurred on other points.

The Draft Report of the Council to the General Meeting was considered, and was referred to the President, Vice-Presidents, and Dean for final revision.

The following persons were elected members of the College:—

Mr. W. Cosgrave, A.C.P., Westbourne House, Beverley Street, Port Talbot.

Mr. J. Powlesland, Wallingbrook School, Chulmleigh, North Devon.

Mr. W. F. F. Shearcroft, A.C.P., The Grammar School, Scorton, Yorks.

The following books had been presented to the Library since the last Meeting of the Council:—

By DR. A. E. C. DICKINSON.—Sweet's Anglo-Saxon Reader.

By the AUTHOR.—Harley's Brief Biographical Sketch of Robert Rawson.

By G. BELL & SONS.—Ashton's Mason's Junior English Grammar; Guthkelch's Coleridge's Ancient Mariner, and other English Ballads; Hampshire's Hawthorne's Wonder Book and Tanglewood Tales (Selected).

By the CAMBRIDGE UNIVERSITY PRESS.—Eve's Selected Poems of Victor Hugo; Lewis's Inorganic Chemistry; Winstanley's Spenser's Fowre Hymnes.

By MACMILLAN & CO.—Fowler's English Essays.

By the OXFORD UNIVERSITY PRESS.—Bridge's Hugo's La Légende des Siècles; Chaytor's Bollet's Voyage aux Mers Polaires; Freeman's De Vigny's Servitude et Grandeur Militaire; Garnier's Barbier's Lances and Poemes; Heutsch's Marmier's Les Fiancés du Spitzberg; Michell's Merimee's Contes et Nouvelles.

By G. PHILLIP & SOX.—Childe-Pemberton's Chart of the Centuries; Dickens's Simple Object Lessons from Nature.

By W. RICE.—Journal of Education, 1907. Calendar of University College, Nottingham.

**REGISTRATION IN SCOTLAND.**

“THE WHOLE MOVEMENT IS A MISTAKE.”

THE movement for Registration of Teachers, as initiated by the Scotch Education Department (says the *Educational News*), has stirred the teaching profession of Scotland as probably no other movement has done for many years past. Everywhere it was felt that the matter was of almost vital importance to the schools, and especially to individual teachers.

The various steps which have led up to the present position are worthy of note. Let us first look to the schools themselves. During the last ten years, more particularly during the last five years, there has been a steady development in the organization of the public schools into something resembling a system, until at last we now have them pretty well divided into primary, intermediate, and secondary schools, the division depending mainly upon length of curricula. There has also been quietly going on a grouping of teachers into these several categories. School Boards with Higher Grade or Intermediate Schools were steadily transferring their most highly qualified teachers to these schools, and were searching the country for others similarly qualified as vacancies occurred. The same held good for secondary schools. To a logical mind it might, therefore, appear quite natural that the teachers should be separated into corresponding groups, and should be labelled in some corresponding way. This, at any rate, seems to have been the dominating idea in the Scotch Education Department. It is not unnatural that those responsible for the official working of that great Department should desire to see a nice cut-and-dried system, with everything and everybody properly pigeon-holed and classified.

The Regulations for the Training, &c., of Teachers, issued in June, 1906, may be said to have initiated the steps which have culminated with the present proposals. Article 42 of these Regulations offers “Recognition” to qualified teachers holding recognized positions on the staff of intermediate or secondary schools. At that time, and until recently, these expressions were interpreted to mean that a person who, at the specified date, held a position on the staff of an intermediate or secondary school, and whose appointment had been notified to the Department, could claim “Recognition” as a matter of course. But in the autumn of this year there appeared a Departmental Circular (406), with an accompanying Form (49 T), defining more clearly the meaning which the Department wished to give to Article 42. Recent interviews between Mr. Struthers and representatives from teachers’ associations helped to throw light on the intentions of the Department. It cannot be said that the increased light thus thrown gave much satisfaction to teachers. Recognizing the good intentions of the Department towards both Scottish Education and the teaching profession, they felt that there was great possible danger in the policy to be pursued. Nothing has so far happened to show that this mistrust is unfounded. We can only hope that the result will turn out quite contrary to anticipations.

The Educational Institute, speaking through its Special and Higher Education Committees, has determined to recommend all teachers, if they have claims for “Recognition” under Article 42 or Article 45, to apply to the respective authorities for that recognition. At the same time these Committees express the conviction that the whole movement is a mistake, and will not effect the very purposes which it is intended to accomplish.

**RELIGIOUS EDUCATION IN ELEMENTARY SCHOOLS.****RESOLUTIONS OF THE FRIENDS’ GUILD OF TEACHERS.**

IN view of the still unsettled position of the religious education problem in elementary schools—the claims of denominationalists on the one hand, and the trend towards a secular solution on the other—and in view of the very varying and ill-defined ideas included under this phrase, “secular solution,” the Friends’ Guild of Teachers desires to urge the following points:—

1. That no education will be worthy of the name which fails to provide for the best moral and spiritual growth of the child.

2. That the suggestion that the secular solution may be supplemented by the concession of universal right of entry to ministers of all denominations is radically unsound: it destroys the unity of the school; it emphasizes divisions at a most inappropriate

age; it takes away the highest teaching from those who know the child best, and who are competent teachers by training and experience; and it involves the classification of the school, not according to age, capacity, or attainments, but according to the religious beliefs of the parents.

3. That, in order, therefore, to preserve right organization and educational method, and to ensure a unified ideal in life and a practical conception of religion as concerned with the whole of life, this provision (for moral and spiritual needs) ought to be an integral part of the work of the school under the school staff.

4. That, while great importance must be attached to the indirect influence of the spirit of the school, the quality of the work, and the personality of the teacher, it is right that definite opportunities should also be set apart for these purposes of highest import.

5. That this education should not be with the object of inculcating dogma; not only because this is no function of the State, but because dogmatic instruction is entirely and inevitably uneducational; it is unfitted to the minds of children; it is largely meaningless to them; it forestalls the experience which can alone give significance to the dogma, and it stiles that spirit of independent search for truth which is even more important here than in any other sphere.

6. That, within the limits of this practical and undogmatic purpose, great freedom should be given to the teacher; for thus only can the best be hoped for from him; there is good reason to believe that he will justify the confidence placed in him, will rise to his responsibility and be enabled to work under conditions of sincerity and progress.

7. That it is essential that this religious education should be given on the best and most intelligent lines, by men and women competent by training and knowledge to give it; it is therefore very desirable that the increased provision which is urgently demanded for the adequate training of teachers should allow of their qualifying themselves in this direction also: the tests applied will then be those of character, capacity and equipment—the only tests compatible with self-respect and intelligence.

**CURRICULA OF SECONDARY SCHOOLS.****BRITISH ASSOCIATION COMMITTEE’S REPORT.**

FOLLOWING is the Report of the Committee, consisting of Sir Oliver Lodge (chairman), Mr. C. M. Stuart (secretary), Mr. T. E. Page, Profs. M. E. Sadler, H. E. Armstrong, and J. Perry, Sir Philip Magnus, Principal Griffiths, Dr. H. B. Gray, Prof. H. A. Miers, Mr. A. E. Shipley, Prof. J. J. Findlay, and Sir William Huggins, appointed at the York meeting of the British Association in 1906, to consider and to advise as to the curricula of secondary schools—in the first instance, the curricula of boys’ schools:

The Committee submit for consideration the following conclusions which they have reached as the result of their debates:—

1. There is need for secondary schools of different types, with different curricula or combinations of curricula: because (a) all boys are not suited to the same course of study; (b) the requirements of the various callings upon which the boys will subsequently enter differ considerably; (c) the needs of the schools differ in a considerable degree according to the economic conditions of the districts in which they are situated. Broadly speaking, however, the secondary schools fall into two different types—viz., those in which the majority of boys remain till eighteen or nineteen, and then continue their education at places of University rank; and those in which the majority leave at fifteen or sixteen and proceed to business. There is, however, no sharp line of demarcation between the two.

2. The Committee consider that one modern foreign language should in all cases be begun at an early age; but are of opinion that it would be a wise educational experiment to postpone the systematic teaching of Latin as an ordinary school subject till twelve years of age, and that such a change will prove sufficiently successful to warrant its adoption. On the other hand, they are of opinion that such absence of systematic teaching by no means precludes its incidental teaching before the age of twelve by such means as will naturally occur to a fully qualified teacher of young boys. The Committee also desire to record their opinion that the continued teaching of either of the two dead languages to boys who after serious trial have shown little or no progress in, or capacity for, such linguistic study has little or no educational value; and that, though the mental training afforded by such study is of great value in the case of many boys, yet in the case of others such study not only produces no good results, but does positive harm to their mental and moral progress by reason of

their incapacity to grapple with its difficulties. The Committee go further, and express their doubt whether the authorities in some secondary schools have sufficiently recognized this fact or have provided sufficient alternatives to such linguistic study.

3. The Committee deprecate any form of early specialization in the education of children, and therefore regard with grave concern the fact that the entrance examinations at the great English public schools give undue prominence to the study of Latin (and Greek) in the course of education at the preparatory schools, the result being that too little time is available for (a) the teaching of the mother tongue, (b) manual training, (c) science and mathematics.

4. The Committee would deprecate anything like State-imposed rigidity in the organization and studies of secondary schools. But the Committee are led to the conclusion that up to twelve years of age there might be a broad general course of education for all. It would in all cases include careful preliminary training in the use of the mother tongue, so that it could be used in speaking and writing correctly on ordinary occasions, and would further comprise the following divisions:—(1) literary, (2) mathematical, (3) scientific, (4) manual training. They consider that a school week of twenty-six hours might be divided as follows:—Literary work, thirteen hours; mathematical and scientific work, nine hours; drawing and manual training, four hours; while for those who after twelve years of age commence the study of Latin the division of time should be—Literary work, sixteen hours; other subjects, ten hours.

5. The Committee are of opinion that the curriculum in secondary schools suffers gravely from the number of subjects which have been crowded into it, and they regard this as the most serious factor in secondary education at the present time. They are of opinion that this "overcrowding" is due to two causes:—(1) The disproportionate amount of time bestowed in many schools on the two ancient languages, which leaves only a small residuum for each of the other subjects now increasingly regarded as essential items of education, the result being that the pupil obtains only a smattering of the knowledge of such subjects. (2) The ill founded belief that the curriculum should be an abstract of all modern knowledge.

6. The Committee desire to see a great simplification in the arrangement of examinations for secondary schools, and they strongly recommend that examination and teaching should go hand in hand, the examiners co-operating with the teachers and acting in conjunction with them in order to further the interests of real education.

The Committee would urge upon the Universities and professions to accept as qualifying for entrance the Leaving Certificates granted by each University to the schools which submit to its inspection.

The aim should be to examine in accordance with the teaching, and to pay special attention to the special peculiarity of each school, or group of schools; and it would be a great relief, and at once improve the teaching of the higher forms, if the results of such examination were accepted by Universities and professional bodies without further entrance test.

The Committee particularly deprecate any uniform or centrally administered examination applied to all the schools of the country. For a uniform State examination, if it were made the door of entrance to all higher courses of study and to the professions and Civil Service, would do much evil, focussing the efforts of teachers and pupils upon those parts of the school curriculum in which alone examination is possible. Further, the rivalry between schools would cause the standard of attainment steadily to rise, until the over-pressure became serious and intellectual vigour and independent thought were killed.

7. The Committee feel that no scheme of secondary education can be satisfactory unless it is carried out by teachers of learning and force of character, and they would urge that every effort should be made, by conditions of appointment, by scale of salaries, and by retiring allowances, to attract a high class to the teaching profession, which should be regarded as a very laborious, but very honourable, form of public service. Prompt action in this matter is urgent and imperative; for, unless something is done without delay, the best interests of the schools, and especially of boys' day schools, will be sacrificed to a false and disastrous economy.

Accompanying the Report are the following two communications by Dr. Gray and Prof. Armstrong. "These," says Sir Oliver Lodge, "were not submitted to, or agreed upon by, the Committee: they represent individual rather than collective views." They may, however, be usefully appended here:

## SCHOLARSHIPS IN SECONDARY SCHOOLS.

By Dr. H. B. GRAY.

The present system of awarding scholarships at secondary schools is open to certain grave objections.

### (A) ENTRANCE SCHOLARSHIPS.

(i.) With regard to the qualification for candidature, the examination should be open to all candidates not exceeding the appointed age; but before accepting the emoluments of a scholarship the parent or guardian of the successful candidate should make a declaration that he requires assistance in order to send the boy to the school.

(ii.) With regard to the subjects of examination the following subjects should be *obligatory*:—(a) English, (b) Latin, (c) French, (d) elementary science, (e) mathematics, up to a fixed but not high standard. Each of these subjects should be marked equally.

The following subjects should be *optional*:—(a) advanced Latin, (b) advanced French, (c) advanced mathematics, (d) advanced science, (e) Greek. But no candidate should be allowed to take up more than *two* of these optional subjects.

(iii.) The age of candidature should be twelve to fourteen.

(iv.) Industry and good behaviour being assured, a boy should be permitted to enjoy his scholarship till the end of the term during which his seventeenth birthday occurs; but the scholarship should not be continued unless the head master certify in writing that he is likely to win a scholarship at one of the Universities or to do himself and his school credit academically at such University.

### (B) LEAVING SCHOLARSHIPS.

(i.) With regard to the qualification for candidature the same conditions should apply as for entrance scholarships. With regard to subjects of examination:—For literary scholarships—(a) English, including *précis* and essay work, (b) at least one ancient language, (c) at least one modern language. For scientific scholarships—(a) English, including *précis* and essay work, (b) mathematics, (c) at least one branch of natural science.

## THE TEACHING OF CLASSICS.

By PROF. ARMSTRONG.

Prof. Armstrong desires definitely to raise the grave question whether classical teaching, not mere neglect of modern subjects, be not largely responsible for the present situation—for the lack of interest and the failure to appreciate progress which seems too often to characterize those who have received what is called a classical education. He is of opinion that we need to consider whether the teaching of Latin and Greek in the conventional way has not a directly detrimental effect in hindering the broad development of mental faculties. Some explanation is required of the fact that those who have been thoroughly trained in classics often prove themselves to be unresponsive to new ideas, unimaginative, and unprogressive. There are men of experience as classical teachers who question whether the classical system fortifies the mind. Helmholtz, too, has pointed out that "linguistics fail to lead us to the true source of knowledge, nor do they bring us face to face with the reality we seek to know . . . knowledge is transmitted to the individual of the origin of which he has no right conception."

He would not advocate the omission of Latin, however, but that it should be taught always together with other subjects, which would afford the necessary corrective to its baneful influence. Thorough experimental work should be most insisted upon probably in the case of those who are earnest classical students.

It seems to him that it should be the chief aim of schools to give training in method and to excite interest, and that the difficulty of including subjects in the curriculum would be less felt if this were more clearly recognized.

The right teaching of the mother tongue, so that it may be used properly in speaking and writing on ordinary occasions, as well as the real use of books as sources of information, need far more attention than they have received in the past. The teaching of history and geography as specific subjects is probably much overdone, and knowledge of such subjects might be acquired more by systematic reading.

Mathematics should always be dealt with from the practical standpoint, so that it may become a useful weapon to the learner; and science must be taught practically and, at first, mainly from the point of view of method, so as to develop powers of observa-

tion and of logical thought. The results of scientific inquiry must also be brought broadly home to the minds of scholars, in so far as they bear on the world in which we live and on our work in it. At the later stage a broad course, in which biology figures as well as physical science, is required; but details must be avoided and methods of honest, thorough work inculcated.

Lastly, the intellectual value of manual training has to be appreciated. The results already obtained at Osborne and Dartmouth show that such training probably has a high value as mental discipline, and that it should be made an essential element of school work for all scholars.

## REVIEWS.

### THE COMPLETE GUIDE TO HYGIENE.

*Lessons in Practical Hygiene, for Use in Schools.* By Alice Ravenhill, F.R.San.I., Lecturer to the University of London Extension Board, late Lecturer on Hygiene and Inspector under the West Riding of Yorkshire County Council. With Preface by Prof. M. E. Sadler, M.A., LL.D. (5s. net. E. J. Arnold & Son, Leeds.)

Miss Ravenhill needs no introduction to wideawake teachers much less to the sanitary experts. Not only has she proved her qualities in the class-room, but she has also investigated in America as well as in England the methods and processes of the teaching of hygiene, and is in close contact with the organizations whose object is to spread the light upon this increasingly important subject. The present volume might easily have borne a more ambitious title. Part I. treats generally of the phenomena, characteristics, requirements, and influencing conditions of life and the characteristics of air and water. Part II. describes in relation to hygienic considerations the human body, its systems and their functions, its general constituents, the digestive processes, and the organs of sensation. Part III. deals with proximate food principles—tests, methods, and effects. Part IV. discusses personal hygiene—care of the person, clothing, cleanliness, and so forth. Part V. surveys the dwelling—soil, building materials, ventilation, warming, lighting, sanitation, &c. Appended are bibliography, glossary, and index. The disposition of the multifarious subjects is thoroughly systematic, and the handling is intensely practical and entirely experimental. Teacher and pupil have simply to attend to the orderly and lucid directions and to follow them out. Explanatory matter and more advanced points are put into smaller type under the different sections. The work is comprehensive, and it has been executed in detail with conscientious elaborateness: moreover, for absolute security, the various sections have been submitted to the careful criticism and revision of specialists. There are 139 figures in illustration. It is only too true, as Prof. Sadler says in his commendatory preface, that "much remains to be done before the teaching of hygiene on practical lines can be regarded as an effective part of our national education." But, if this book were substantially taught in the spirit in which it is written, the efficiency of the teaching of hygiene would no longer admit of question. It just occurs to us that a more elementary and less extensive book, containing the main points of the subject in a popular form, would be invaluable not only as an introduction to the present volume, but as a guide to such pupils as cannot overtake the full course here prescribed.

### FOURIER'S SERIES.

*Introduction to the Theory of Fourier's Series and Integrals, and the Mathematical Theory of the Conduction of Heat.* By H. S. Carslaw, M.A., D.Sc., F.R.S.E. (14s. net. Macmillan.)

Although the volume must be classed as a treatise of special rather than general character, yet the interest of its pages is so many-sided that it necessarily gives the work a claim on the attention of a large section of the general body of mathematicians. As a matter of course, the student of the mathematical theory of heat will benefit by reading the volume from cover to cover, and by endeavouring to master its contents thoroughly. But the worker in the field of Pure Mathematics will find in Part I. a rich store of information helpful to him also, in his own labours—a scholarly discussion of the entire system of real numbers viewed by the light of both geometry and arithmetic; a detailed investigation of the subjects of "aggregates," of "sequences," and of infinite series; a special consideration of the theory of "convergence" and its relation to the problem of the summation

of series; an inquiry into the "convergence" of infinite definite integrals; and, as the name of the volume indicates, an introduction to Fourier's Series and Integrals, in which rigorous proofs of the expansions are given, based by the writer on the methods of which Neumann and Weber laid down the lines. That all this work in the region of Pure Mathematics should be included in a treatise of which the ultimate object would seem to be the consideration of the application of Fourier's expansions to an important physical problem, bears ample testimony to the spirit underlying the author's work, namely, the devotion of one truly striving to advance knowledge and animated by a desire to sound his subject to the very depths. That such is the motive power at work, is further evident from the Introduction, in which the author clearly expresses in words the primary difficulty which besets the student of Fourier's Series, and traces step by step the course to be followed—the one actually adopted in the subsequent discussion—in order to overcome it. But the classes of readers to whom the treatise affords valuable information are not yet exhausted; for the student of the History of Mathematics may derive much useful knowledge from the introductory historical chapter. We learn there the period at which there first arose a question as to the possibility of expanding an arbitrary function of a *real variable* in a series of sines and cosines; we obtain an insight into the cause of the discussion—namely, the bearing which the point raised has on the problem of the vibrations of strings. The parts taken by D'Alembert, Euler, and Bernoulli in the attempt to obtain a solution of the fundamental equation are clearly indicated. The contributions of Lagrange are noted, and the ease with which this last named mathematician might have taken the further steps whose importance, as forming the completion of the work, is pointed out in order to prove the reality and the magnitude of our debt to Fourier. There is unquestionable pleasure as well as benefit to be derived from tracing with Dr. Carslaw the various stages in the growth of the theory. And there is the labourer in yet another field of work who will be ready to acknowledge his indebtedness to the present text-book: the bibliographer will meet in the appendixes with lists (giving the dates) of treatises, memoirs, and papers dealing with the matter discussed in both Parts of the text. The value and importance of Dr. Carslaw's work, as may be gathered from the above brief notice, cannot but speak for themselves to the reader.

## GENERAL NOTICES.

### MATHEMATICS.

*First Steps in the Calculus.* By A. F. Van der Heyden, M.A. (3s. Edward Arnold.)

Addressed principally to the students of evening classes who possess a knowledge of geometry, algebra, and trigonometry up to the standard of Stage III. of the Board of Education, this little work is necessarily rather restricted both as to size and scope. Within its prescribed limits, however, it will greatly commend itself, owing to the breadth with which the author treats his subject and to the effort made throughout to convey first principles clearly and to fix the ideas of the beginner by the consideration of some of the simple practical applications of which such principles are capable. The course followed in the text-book includes all that is expected in the Calculus from students qualifying themselves in the mathematics required for Stage V. by the syllabus of the Board of Education. In addition, it may be reasonably anticipated that the work will prove of value in the classes of secondary day schools.

*"Thorough" Arithmetics (Scheme B).—Teacher's Book, No. III.* By W. Woodburn. (9d. net. Chambers.)

We noticed favourably some time ago the series of which the above is a specimen volume. It may be well, however, to recall to our readers the usefulness of the publication and to mention one or two valuable features of the Teacher's edition. For example, the volume designed for use with the pupils of a particular "Standard" contains a statement of the Code requirements affecting them. Again, the method adopted in arranging the question and answer material offers great facilities for rapid reference, and young teachers will probably find many of the notes very helpful.

*Junior Arithmetic.* By W. G. Borchardt, M.A., B.Sc. (2s. Rivingtons.)

The writer has arranged a useful volume. Although it consists mainly of a large number of exercises, still it contains a certain proportion of text, which takes the form of numerous notes and fully worked illustrative examples. On the whole, instruction in the theory of the subject and the explanation of processes are left to the teacher. The answers to the unworked questions give satisfactory results when

tested at random for accuracy. The work has been compiled both for the junior student in general and as an aid to the candidate preparing for junior examinations, to whom it will afford much scope for acquiring skill in the treatment of elementary arithmetical problems.

#### FOREIGN COMMERCIAL CORRESPONDENCE.

"Hooper and Graham Series."—(1) *French Commercial Practice connected with the Export and Import Trade* to and from France, the French Colonies, and the countries where French is the recognized language of commerce. Part II. (4s. 6d.) (2) *German Commercial Practice connected with the Export and Import Trade* to and from Germany, the German Colonies, and the countries where German is the recognized language of commerce. Part II. (4s. 6d.) (3) *Spanish Commercial Practice connected with the Export and Import Trade* to and from Spain, the Spanish Colonies, and the countries where Spanish is the recognized language of commerce. Part II. (4s. 6d.) (4) *The Foreign Traders' Correspondence Handbook*. (3s. 6d.) (5) *The Foreign Traders' Dictionary of Terms and Phrases in English, German, French, and Spanish*. (3s. 6d.) All by James Graham, Secretary for Higher Education, City of Leeds, formerly Inspector of Commercial Subjects and Modern Languages for the West Riding County Council, and George A. S. Oliver. (Macmillan.)

(1)–(3) are the advanced books, following three corresponding introductory books, and dealing (as, of course, the introductory books also deal) with the three several languages as they are applied in actual commerce, "and practically the whole of the matter contained in the books is drawn from real business, the series of letters and documents having been used in actual foreign trade transactions." The student needs all the three (or six) books, because any one set cannot be used for all the three countries by simply turning the one language into the others: the differences are material, and not merely linguistic. The advanced books introduce the student to importing and exporting transactions of considerable difficulty, and furnish ample illustration, explanation, and exercises, together with a number of facsimiles of actual documents. The general framework is this: (a) model letters—correspondence with agents, correspondence relating to transactions in goods, forwarding packages for shipment, claims, &c.; correspondence relating to payments, drafts, accounts current, dunning, &c.; correspondence relating to inquiries made about firms, and information supplied, correspondence relating to suspension of payment, letters of introduction and of credit, applications for situations, &c.; (b) notes on vocabulary of model letters; (c) questions for conversational exercises (relating to the model letters); (d) exercises to be rendered into French (German or Spanish), being supplements to the model letters; (e) abbreviations used in French (German or Spanish) correspondences. The treatment is most capable and thoroughgoing.—(4) presents, in English, French, German, and Spanish, the matter contained in the introductory books of the series, arranged side by side, in four vertical columns, and is intended for ready reference by traders.—(5) is "a comprehensive, systematic, and alphabetical vocabulary of commercial and financial terms, titles, articles of trade, and special phrases used in the home, import, and export trades, and in financial, shipping, and accountancy work generally, for the use of British firms and commercial students." The phrases and terms are given in each of the four languages in parallel columns. The series is far beyond anything else of the kind that we have seen; and the student that works through it faithfully will find a great reward.

*Prof. Schilling's Don Basilio*. A Practical Guide to Spanish Conversation and Correspondence. Translated and edited by Frederick Zagel. (2s. 6d. F. Hodgson, 89 Farringdon Street, E.C.)

This volume was written by Prof. Schilling as a companion reading-book to his excellent "Spanish Grammar." The first Part (89 pages) consists of a series of dramatic dialogues in which Don Basilio, "a bachelor and professor of languages" on holiday, figures variously enough to exemplify conversation under all ordinary circumstances. The talk is always bright—there is not a dull page in the Part; and any student that works through it carefully is bound to acquire an excellent working command of Spanish conversation. The second Part (66 pages) gives 100 examples of private and business letters and forms, together with lists of abbreviations, styles of address, modes of concluding a letter, &c., and a vocabulary. The volume is an admirable *multum in parvo*. The selection and disposition of materials must have been a prolonged and exacting labour, by which the student will largely profit.

#### ART—DRAWING—WRITING.

*Instructions to Teachers of Drawing*. Prepared by W. W. Rawson, A.R.C.A. (1s. Department of Public Education, Colony of the Cape of Good Hope.)

After a general introduction, Mr. Rawson lays down rules to be observed in teaching drawing, and sets forth methods of drawing and materials to be used. Then he deals with the several Standards of the Elementary Stage, the scheme of Manual Training in connexion with the Drawing Syllabus, the syllabus for High School Standards C and D, examinations, and inspection, with plentiful illustration

throughout. The "Instructions" are evidently the result of prolonged and varied experience. They develop and co-ordinate the teaching in the most careful manner, and keep sight of principle through all the details. An excellent practical syllabus.

*The King's Writer*, by Reginald Gill, F.R.G.S., consists of (1) a series of four books corresponding to four stages and providing "a complete course of instruction in English script characters . . . engraved upon the Normal System of writing" (12s. net per gross); and (2) five books upon special subjects—business transactions, lettering, map-drawing, &c. (18s. net per gross). The books are progressive and sufficiently varied, and the characters are bold and clear. Messrs. George Gill & Son are the publishers.

*The Life and Leaf Set of Drawing and Design Cards*, by W. Midgley, A.R.C.A. Lond. (2s. net, Chapman & Hall), are disposed on ten sheets, 9½ in. x 11½ in., on the left half of each sheet being a "study" of some animal, leaf, or other object, and on the right half an "exercise" of adaptation of more or less of the "study" in a decorative design. The idea is a very practical one, and it is worked out with much ingenuity and care. The printers (the *Midland Counties Herald*, Limited) deserve a word of recognition.

#### MISCELLANEOUS.

The first number of *The New Quarterly* (2s. 6d. net, Dent), "a Review of Science and Literature," edited by Desmond MacCarthy, produces a very favourable impression. The articles are ably written, as well as varied in subject and treatment; and the spacious type is agreeable. Lord Rayleigh discourses on the puzzling question, "How do we perceive the direction of sound?" and his son, the Hon. R. J. Strutt, inquires "Can we detect our drift through space?" The Hon. Bertrand Russell contributes a weighty, but very readable, paper on "The Study of Mathematics." Literature, English and French, is handled agreeably and capably by Mr. G. L. Strachey, Mr. Arthur Symonds, and Mr. T. Sturge Moore. Mr. G. A. Paley indicates a few points at which modern theoretical writers on politics have been directly influenced by the conclusions of biologists." And the rest of the contents have their special interest. The magazine makes an excellent start, and we wish it every success in its progress.

*The International* (1s. net, monthly, Fisher Unwin) also makes its first appearance with omens of success. It is "a Review of the World's Progress," edited by Dr. Rodolphe Broda. The editor, we learn, "has been travelling through the five continents for several years, and has now secured a permanent staff of about 250 correspondents scattered all over the globe." We shall thus have news of what is going on, news "dealing with essential events and tendencies," and on receipt "examined by the editor from the point of view of elucidating the trend of human affairs." The editor does not propose for himself a sinecure. The December number—the first—offers eight articles of a varied and important character by competent writers of various nationalities: "Sweating and the Minimum Wage" (Sir Charles Dilke), "The Spirit of Modern Germany" (Prof. Lamprecht), "The Situation in South Africa" (H. L. Outhwaite), "Liberal Catholics and the Encyclical" (Abbé Naudet), "Imperial Federation" (Sir John Cockburn), "The Welding of Nations" (Frédéric Passy), "The Hague Conference" (Francis de Pressensé), and "The Awakening of Danish Small-Holders" (C. Münch). Finally, the Editor's Review of the Month, and Correspondents' Reports from all points of the compass. A very instructive and agreeable number, promising a successful career.

The December number of *The Irish Educational Review*—the third issued and the first that has come our way (6d. net, Brown & Nolan)—has at least the merit of outspokenness. Not that every contributor comes up to the standard of the Very Rev. George Canon Richardson, who, in a paper on "The Present Position of Education in England," has the courage to say this: "My conclusion naturally is that the less a man believes in God, and therefore the more immoral he is, the sooner will he be embraced by Mr. McKenna as the only true teacher of the youth of this country." The writer of "Educational Notes," however, does not lag far behind. He says: "It is not very complimentary to his Majesty's Ministers to assume that they are playing a game of vulgar bluff, but charity itself compels the assumption." One is glad that it will increase. Some reasonable apprehension of the facts would not be amiss, and some practice of clear thinking would be an advantage. There is good matter and reasonable criticism in some of the other articles. We hope the editor (the Rev. Andrew Murphy) will get his team more firmly in hand by and by, for the magazine might be made very useful under a little stronger control.

*The R.P.A. Annual*, formerly "The Agnostic Annual" (6d. net, Watts), opens with an extremely interesting article on "The Home Life of Thomas Henry Huxley," by the Hon. John Collier, son-in-law of Huxley, and contains a dozen other papers, more or less controversial on the rationalistic side, as well as two poems (by Eden Philpotts and Harold Johnson). The origin and growth of the R.P.A. is sketched by Mr. Charles E. Hooper; the message of Positivism is ably presented by Mr. S. H. Swinny; the lesson of evolution is enforced by Mr. Joseph McCabe; and Mr. F. J. Gould, forecasting the

educational future, prophecies that "secular education will be practically realized within the next few years." Prof. Haeckel argues, in a Note, that "all the objections that are urged against Darwin and Huxley on account of their theory of man's simian descent must apply also to Linné" (Linnæus). In spite of narrowness and perversity, there is much matter worth sober consideration in this issue of the Annual.

#### AN INDISPENSABLE ANNUAL.

*Hazell's Annual* for 1908, edited by W. Palmer, B.A. Lond. (3s. 6d. net), has just been published by Messrs. Hazell, Watson, and Viney. The revision comes down to December 2. The concise accounts of the main matters of more immediate interest, domestic and foreign, are presented with all the usual care and judgment; and some of the more technical articles have been furnished by experts. Acts of Parliament and Blue Books have been boiled down into intelligible and manageable form. New biographies, chiefly foreign, have been added. Every effort has been made, obviously, to provide the information that is likely to be wanted by politicians, journalists, commercial people—anybody and everybody. This is the twenty-third year of issue. The work is indispensable for reference.

#### NEW YEAR GIFT-BOOKS.

##### ROMANCE OF FACT.

*The Romance of the King's Navy*, by Edward Fraser (5s., Henry Frowde and Hodder & Stoughton), is intended to give boys of to-day an idea of some of the notable events that have happened under the White Ensign within living memory—from the Crimean War downwards. An early chapter tells how the Navy's V.C.'s have been won, in a connected narrative of the heroic deeds; and other chapters narrate again a number of stirring incidents in the history of the Navy. A companion volume is *The Romance of the King's Army*, by A. B. Tucker (5s., Henry Frowde and Hodder & Stoughton). It recalls many of the more inspiring incidents in the history of our land forces—the charge of the 21st Lancers at Omdurman, the capture of the heights of Dargai, the saving of the guns at Maiwand, &c.—with chapters on the V.C., the colours, regimental pets, "women who followed the drum," Chelsea Hospital and other institutions for veterans, and so forth. Both volumes are of extreme interest; they are brightly written; and they are illustrated from photographs and famous pictures.

*The Romance of Every Day*, by Lilian Quiller-Couch (5s., Henry Frowde and Hodder & Stoughton), makes an exceedingly interesting "bookful of brave deeds," not merely on the battlefield or on the sea, but also in the mine, on the railway line, in the burning house, in the midst of the plague, &c.—deeds of men, of women, and even of children—twenty-five stirring chapters of the most varied incidents. They are "chiefly brave romances, without much hint of the less worthy side; but in them," says the author, "I have tried to show that romance is a quality which can be called neither ancient nor modern, which belongs exclusively neither to rich nor to poor, but is a bright thread running through all periods and all classes." Six illustrations by James Durden.

*How it is Made*, by Archibald Williams (3s. 6d., Nelson), "describes in simple language how various machines and many articles in common use are manufactured from the raw materials"—the processes of making coins, paper, matches, pianos, watches, pens, pins, needles, &c., and of the manufacture of glass, cotton goods, rubber goods, iron and steel, armour plates and big guns, motors, &c. The description is plain and lucid; and there are 198 illustrations, besides a coloured frontispiece. The volume will make the reader "realize what ingenuity and toil are devoted to the manufactures which render living comfortable and the country prosperous." It is based on personal observation in the course of a tour of inspection among our industrial centres. An admirable volume to put into the hands of a boy.

##### HISTORICAL AND DESCRIPTIVE.

*Lisbon and Cintra*, "with some account of other cities and historical sites in Portugal," written by A. C. Inchbold and illustrated after water colours by Stanley Inchbold (10s. 6d. net), belongs to the handsome series of new volumes in large foolscap quarto, with coloured illustrations after original drawings, published by Messrs. Chatto & Windus. There are thirty full-page illustrations, representing the most important objects and the most varied sights. The characteristics of the people and of the country, as well of the greater cities and the more famous sites, are depicted in an agreeable way; and the outstanding events of Portuguese history are interwoven with the descriptions. Much attention is given to art, and notably to the many fine examples of architectural design. The work is extremely interesting as well as handsome.

*Women of Florence*, by Isidoro del Lungo, translated by Mary C. Stegmann and prefaced by Guido Biagi (7s. 6d. net), is also published by Messrs. Chatto & Windus. Prof. del Lungo is an Italian historian of distinction, and, in his exploration of archives for his history of the times of Dante, he "found himself brought into con-

tinual and direct contact with documents relating to the life of ancient Florence, documents wherein he discovered records and traces of many obscure women, who thus unconsciously revealed to him the secret of their forgotten existence"—women glorified in poetry, women regarded as saints, legendary heroines, and many representatives of other feminine ideals. The examples are taken from the period between the Rise of the Commune of Florence and the Cinquecento (eleventh to sixteenth century). The work is adapted rather than translated, the Professor's somewhat sonorous, verbose, and detailed narrative being recast in a plain and readable English form. The interest is vivid throughout; and it is not confined to the heroines but extends to the general social facts of the period. The work is generously illustrated: there are two coloured plates and twenty-five half-tone plates, while the binding design is after a Cinquecento original.

##### VARIOUS.

*Captain Swing*, by Harold Avery (5s., Nelson), is a capital "tale of the 1830 riots." The Rev. William Eldridge, incumbent of the vicarage of the little village of Rutingdon, in Southshire, eked out his very poor living by taking pupils; his two pupils at the time—one of whom had got expelled from a public school for an incautious exhibition of high spirits—are the heroes of the story. The missives of Captain Swing and the visits of his myrmidons disturb the placidity of the good vicar and the comfort of his youthful daughter, but the boys enter into the successive incidents with great verve. Moreover, there is a mystery about Duncroft—a place belonging to the vicar, but believed to be haunted and so unlettable; and the boys naturally want to come to close quarters with the ghost—which they do. The story is briskly evolved, and the tone is admirable.

*King of the Air; or, To Morocco on an Airship*, by Herbert Strang (2s. 6d., Henry Frowde and Hodder & Stoughton), is a very up-to-date story and might seem to be based on incidents of the other day. The eighteen-year-old son of a village blacksmith develops a strong mechanical turn, and, in conjunction with a rich man whose motor he had set going again on the road years before, elaborates an aeroplane. A son of the Prime Minister comes to know of the invention, which is utilized to relieve the Prime Minister's anxiety for Sir Mark Ingleton, who has been captured on a diplomatic mission to Morocco and carried off to the hills by the tribesmen. The adventures are sufficiently picturesque, and the amusement is heightened by the idiosyncrasies of Herr Schwab, the indefatigable "representative of ze Schlagintwert Gombany of Düsseldorf." A bright and bustling story, with four illustrations in colour by W. E. Webster.

*The Pendleton Twins*, by E. M. Jameson (5s., Henry Frowde and Hodder & Stoughton), continues the history of the Pendleton family already developed in two or three volumes. The present adventures commence on the start for the Christmas holidays; the train is snowed up and the journey delayed. Their Christmas is a merry one really; and then there is a midnight chase of a burglar, and a cave with hidden treasure, and accidents and search parties, and so forth. But all ends happily. The story is written with much resource and humour, and the children will be delighted with it. Six illustrations in colour by S. B. Pearse.

*Through the Magic Door*, by Sir Arthur Conan Doyle (5s., Smith, Elder, & Co.), is a series of charming causeries upon the writers of books on his library shelves, with no less interesting divagations suggested by the subjects in hand. "If I had to choose the one book out of all that line from which I have had most pleasure and most profit," he says, "I should point to yonder stained copy of Macaulay's 'Essays.'" "Reading is made too easy nowadays, with cheap paper editions and free libraries. A man does not appreciate at its full worth the thing that comes to him without effort." It is useless to indicate disagreement with judgments of the author or to signalize hasty opinions or prejudices, though on many points we should find reason for not following him: it is enough that the chapters read smoothly and are full of interest, and that the general effect is inspiring. It will do a boy good to read the volume. Sixteen illustrations.

*Betty's First Term*, by Lilian F. Wevill (3s. 6d., Blackie), is a school story, fresh and bright, with a long succession of amusing incidents. Betty is the only daughter of the vicar of a small town in Cheshire, and her first term at a boarding school, where she chums with three other girls of her own age, furnishes abundant scope for scrapes, squabbles, and various excitements. The characterization is good and the style is vigorous. Young readers will like Betty, and be interested in her novel experiences. Six illustrations by Arthur H. Buckland.

*Ruth Ravelstan, the Puritan's Daughter*, by E. Everett Green (5s., Nelson), is a delightful story of the Commonwealth times, the heroine's father being one of Cromwell's major-generals. Rupert Lorimer, an enthusiastic Royalist boy, lives near the house where the Major-General has sent his wife and child from London, just over the Middlesex border; and the two children become friends. Anthony Lorimer, of the younger branch of the family, who lives near, has gone over to the Roundheads, and Rupert alone stands between him and the broad lands of the elder line. In time

Rupert fights for the King, and is as willing to kill Anthony as Anthony could be to kill him. Here is plenty of material for developing an exciting private history with the political and military bustle of the bigger world. The story is ably worked out and nicely written; and there are six good illustrations in colour.

*The Unlucky Family*, by Mrs. Henry de la Pasture (6s., Smith, Elder, & Co.), is the story of a worthy suburban couple with eleven children, who come into a fortune (with a fine country place). Being kind-hearted folks, they set about entertaining their neighbours, calling and receiving calls, visiting the poor people, and so forth. The best intentions, however, do not always yield the most satisfactory results; and in this case they lead to adventures and mishaps of an amusing character. The book, we are told, "is best described as a farcical story for children, which is also likely to amuse their elders." We agree, with the proviso that the children know a good many big words. About thirty illustrations by E. T. Reed.

*Robin's Heritage*, by Amy le Feuvre (2s., Henry Frowde and Hodder & Stoughton), tells in a simple and agreeable way about a little boy that was a cripple for life from having fallen from a tree he had climbed. What the heritage was we will not disclose; but the story has a quietly and strenuously religious tone, influenced by Robin's mother. Then there are Muffet, and Poppet, and Twinkles, who help Robin to make incidents of varied and continuous interest to little ones. A delightful story. Illustrations by Gordon Browne.

*Juliette the Mail Carrier*, by Bessie Marchant (Collins' Clear-Type Press), takes to the American coast—Caplin Sound, not far from Cape Race. Juliette, a fine girl of eighteen, had to carry the mails when her father was laid up by a bad dint on the head received in connexion with a wreck, which had been occasioned by a false light hung out on the neighbouring Pinnacle Rock. But was this her father? For, when found, he was locked in the arms of a dead man bearing a remarkable resemblance to him. There is some villainy about, probably. A little brother, Neal, and a little sister, Nancy, are prominent personages in the development of the story. "Juliette is a brick," says Neal; and we will say the same for Neal himself. A fine story, illustrated by Richard Tod, handsomely got up.

*Twin Brothers*, by Frances Palmer (1s. 6d., Blackie), recounts "the adventures of two little runaways"—Raymond, a strong lad, and Cyril, a delicate lad. Their parents are in India and the children are at school at home. Cyril gets into trouble, and Raymond, fearing for the effects of punishment on the health of his brother, with whose care he was specially charged by his mother, arranges for running away. Then their adventures and difficulties begin. An interesting and suggestive little story, with illustrations by Murray Urquhart.

*Whose Home is the Wilderness*, by William J. Long (5s. net, Ginn), is yet another of the author's nature books describing the life and habits of the wild animals and birds. "It aims to do two things," says Mr. Long: "first, to show some of the unrecorded facts of animal life exactly as I have seen them; and second, to reproduce as far as possible the spirit of the place and the hour, and to let you also feel something of that gladness and peace which I have always found in the silent places." We need not tell those that have read Mr. Long's previous books how interesting it is, and how charmingly written, or how attractively it is got up. Besides the frontispiece, there are ten full-page illustrations by Charles Copeland, who has illustrated sympathetically and beautifully all the volumes of the series, with marginal sketches on every page.

*A Treasury of Verse for Boys and Girls* (2s. 6d. net), and a smaller volume, *A Treasury of Ballads* (1s. 6d. net), selected and arranged by M. G. Edgar, are admirable collections, published by Messrs. Harrap.

*Popular Fallacies*, by A. S. E. Ackermann, B.Sc. Eng. Lond. (6s., Cassell), is a most interesting and curiously instructive volume. Hundreds of popular notions on all sorts of subjects—domestic, historical, technical and scientific, legal, musical, statistical, &c.—are exploded, and, wherever possible, the probable cause of the fallacy is suggested. Incidentally, of course, a great mass of knowledge on the different points is brought together, and the interest is fresh with every new subject examined. There are eight full-page illustrations.

*The Canterbury Puzzles*, and other curious problems, by Henry Ernest Dudeney, is a collection of well over a hundred examples of the most varied character. "It is extraordinary," says Mr. Dudeney, "what fascination a good puzzle has for a great many people"; and so to a great many people this book ought to be very fascinating. "There is really a practical utility in puzzle-solving," he also says; and, indeed, in his introduction he discourses instructively and persuasively on the varieties and virtues of puzzles. Solutions are appended. There are numerous illustrations by Paul Hardy, the author, and others. It is a book of remarkable ingenuity and interest.

*Dorothy's Little Tribe*, by Joan White (3s. 6d., Collins' Clear-Type Press), describes the summer holiday of the young Hamiltons in North Devon, and exhibits the views of a vivacious girl of sixteen.

The story circles round Dorothy (Billy for short) and Dick, a twin-brother; but a step-sister of a somewhat perverse turn, Dorothy's governess, and Mrs. Hamilton's aunt—to say nothing of the young man that would not marry the lady that some other persons wanted him to marry—contribute to the development of the story, which is amply provided with fun and incident. "This is the best holiday we ever had." Four coloured illustrations by F. Elphick.

Collins' Clear-Type Press also publish *Two Princes of Science* (1s. 6d.) in their "Stories of Noble Lives" series—very interesting, full, and well written biographies of Edison and Marconi—with eight illustrations; and, in their "Imperial Library," *Comin' thro' the Rye* (Helen Mathers), with 4 illustrations by A. A. Dixon, and decorative boards, frontispiece, and end papers in colour (2s.)

#### FOR CHILDREN.

"Every Child's Library" (cloth, 1s. net; leather, 2s. net, each volume) is opportunely issued by Mr. Heinemann. We have four volumes to begin with:—(1) *The Old, Old Myths of Greece and Rome*, with 8 coloured pictures copied from the National and Dulwich Art Galleries, and numerous insets; (2) "*One for Wod and one for Lok*," or, *Asgard, Midgard, and Utgard*—myths of the North—with 8 coloured pictures by Wilson Patten, and numerous insets; (3) *Sigurd the Dragon-slayer*, and an outline of the "Nibelungenlied," with 8 coloured pictures and numerous insets; and (4) *The Seven Champions of Christendom*, with 8 coloured pictures by Wilson Patten and numerous insets. The stories are charmingly told by Thomas Cartwright, and the volumes are beautifully printed and liberally and attractively got up.

Messrs. Jack's very popular series are sure to be in busy request (1s. 6d. net and 1s. net each volume). There is the "Told to the Children Series," of which we have several new volumes:—(1) *Stories of Three Saints* (Francis, Columba, and Cuthbert), told by Mary Macgregor, with pictures by Mrs. P. A. Traquair; (2) *Undine* (De la Motte Fouqué), retold by Mary Macgregor, with pictures by Katherine Cameron; (3) *Stories of Roland*, told by H. E. Marshall, with pictures by L. D. Luard; and (4) *Simple Susan* (Maria Edgeworth), retold by Louey Chisholm (the general editor of the series), with pictures by Olive Allen.—In "The Children's Heroes Series" we have *The Story of Cromwell*, by H. E. Marshall, with 8 pictures by Allan Stewart and 5 maps (1s. 6d. net and 1s. net).—In the "Stories from History Series" we have *Stories from Greek History*, told by Ethelwyn Lemon, with 8 pictures by Paul Woodroffe, both in the usual full-dress (1s. 6d. net and 1s. net) and in limp cloth (8d.).—In the "Shown to the Children Series" (2s. 6d. net each) we have *The Sea-Shore*—48 coloured plates, by Janet Harvey Kelman, with descriptions by the Rev. Theodore Wood—a very instructive and suggestive as well as attractive volume. The preceding volumes—(1) *Beasts*, (2) *Birds*, (3) *Flowers*—we have already noticed with approval.—All these series are admirably adapted for children, beautifully printed, and substantially and artistically got up.

"The Children's Bookcase" (1s. 6d. net each volume, Henry Frowde and Hodder & Stoughton) is a delightful series, charmingly written, beautifully printed, liberally illustrated, and daintily got up. There is (1) *The Old Nursery Stories*—nine of them—retold by E. Nesbit and furnished with twelve illustrations by W. H. Margetson; (2) *Cap-o'-Yellow, and other Stories for Children*—a dozen in all—told by Agnes Grozier Herbertson and furnished with twelve illustrations in colour by F. V. Poole; and (3) *Granny's Wonderful Chair and its Tales of Fairy Times*, by Frances Browne, with twelve illustrations in colour by W. H. Margetson.

Messrs. Nelson have begun to issue "a New Series of carefully graduated Reading Books designed to form a Ladder to Literature." While admirable for schools they are attractive enough as New Year gifts. Part I., *Doors of Gold* (10d.), presents in simple language select fairy tales and familiar rhymes and verses. Part II., *Fairy Favours* (1s.), contains imaginative tales from good literary sources, select folk tales of a romantic and humorous character, and snatches of fairy poetry. Part III., *The Hall of Heroes* (1s. 3d.), gives tales of early heroes of the chief European nations, with narrative poetry, chiefly simple ballads. Four more Parts are in preparation. The volumes are beautifully printed and effectively illustrated with numerous full-page pictures in colour and in black and white and with marginal drawings. So far the series is most attractive.

Another delightful series of Messrs. Nelson's contains (1) *Sir Thomas Thumb, or The Wonderful Adventures of a Fairy Knight*, the Courts of King Oberon and King Arthur being gaily mixed up; and (2) *Knights of the Grail—Lohengrin and Galahad*, by Norley Chester. The stories are capitally told and will engage the undivided interest of the children. Each volume has eight illustrations in colour.

*The Magic Water* consists of a connected series of over a score of "stories about children and animals," by Elise H. Delépine (3s. 6d. net, Methuen). They are simply and interestingly told, with instruction incidentally suggested. Besides four plates in colour, there are

# OXFORD UNIVERSITY PRESS.

## THE OXFORD GEOGRAPHIES.

By A. J. HERBERTSON, M.A., Ph.D.,

*Reader in Geography in the University of Oxford.*

Suitable for the Oxford and Cambridge Local Examinations, London Matriculation, the Board of Education's Preliminary Certificate Examination, and general school work.

1s. 6d.

### PRELIMINARY GEOGRAPHY

*Second Edition. 160 pp., with 72 Maps and Diagrams.*

*Nature.*—"An altogether admirable book, which should become the standard geography for schools."

2s.

### JUNIOR GEOGRAPHY.

*Second Edition. 288 pp., with 166 Maps and Diagrams.*

*Geographical Journal.*—"The human element is always to the fore; the why and the wherefore are never absent. The method is therefore generally educative. At the same time it is largely descriptive. The maps and diagrams also deserve high commendation."

2s. 6d.

### SENIOR GEOGRAPHY.

*Second Edition. 370 pp., with 117 Maps and Diagrams.*

*School World.*—"The relation of cause and effect is continually insisted upon, and the lesson driven home by the frequent insertion of educative maps and plans and cross-sections."

## RELATIONS OF GEOGRAPHY AND HISTORY.

By H. B. GEORGE.

*With 2 Maps. Third Edition. 4s. 6d.*

*Educational Review.*—"The volume is one of absorbing interest: to the schoolmaster who teaches English subjects it will prove a very mine of suggestions, and to the student it will prove indispensable."

## GREEK CLASSICS FOR ENGLISH READERS.

Edited by J. CHURTON COLLINS.

### MATTHEW ARNOLD'S MEROPE.

With the "Electra" of Sophocles translated by R. WHITELAW. Crown 8vo, 3s. 6d.

Extra fcap. 8vo, each 1s. net, with introduction and notes.

### EURIPIDES' ALCESTIS.

Translated by H. KYNASTON.

### SOPHOCLES' ANTIGONE.

Translated by R. WHITELAW.

### AESCHYLUS' PROMETHEUS.

Translated by R. WHITELAW.

### AESCHYLUS' AGAMEMNON.

Translated by J. CONINGTON.

## ELEMENTARY CHEMISTRY.

Progressive Lessons in Experiment and Theory. With many diagrams. By F. R. L. WILSON, M.A., Chemistry Master at Charterhouse, and G. W. HEDLEY, M.A., Head Science Master, Military and Civil Side, Cheltenham College. Part I, 3s.; Part II, 5s. Being a general introduction to Science on experimental lines.

*School World.*—"The authors must be congratulated on having produced a course of practical work which justifies the expectations raised by their introductory volume; their scheme of work is eminently sane, and will appeal to all teachers of the subject. . . . The book is splendidly printed and bound."

## THE WRITING OF ENGLISH.

By P. J. HARTOG, Academic Registrar of the University of London; and Mrs. AMY H. LANGDON.

*Crown 8vo, 2s. 6d.*

*Tribune* (Leading Article).—"A most suggestive and encouraging little treatise. . . . Mr. Hartog shows why examinations have a directly pernicious effect on sound and clear writing. . . . He has had valuable assistance from Mrs. Amy Langdon, who contributes a number of excellent typical exercises."  
*Manchester Guardian.*—"Mr. Hartog is not, of course, the first to combat this abuse. But few, if any, have brought to the task a combination of special qualifications so much to the point."

## THE KING'S ENGLISH.

By H. W. F. and F. G. F. *Second Edition. 5s. net.*

*Journal of Education.*—"An original work compiled by authors who can themselves write English."

## THE OXFORD BOOK OF FRENCH VERSE:

*Thirteenth Century to Nineteenth Century.*

Chosen and edited by ST. JOHN LUCAS, M.A. Fcap. 8vo, 6s. net; on Oxford India paper, 7s. 6d. net.

*Daily Telegraph.*—"This new anthology of French poetry, ranging from the thirteenth to the nineteenth century, is, in its way, a perfect gem, reflecting the highest credit on Mr. St. John Lucas, who has selected it, and on the University publishers who have made of the volume a 'thing of beauty.' It is, without doubt, the most complete representation of poetry that has been placed before the English public, and we even venture to go further, and assert that in France itself this little book ought to find a very large circle of readers, for it is incomparably better than any collection of the kind which is in vogue there at the present time."

## OXFORD LIBRARY OF TRANSLATIONS.

### HEINE'S BOOK OF SONGS.

Translated by J. TODHUNTER. Extra fcap. 8vo, 3s. 6d. net; on Oxford India Paper, 4s. 6d. net.

*Evening Standard.*—"We find here that rare achievement, 'the spirit of the original,' especially in the more slight and tender lyrics, and this little volume of verses and translations, or verses in translation, is a very pleasant thing."

## A HISTORY OF MUSIC IN ENGLAND.

By ERNEST WALKER, M.A., D.Mus. 8vo, cloth, 7s. 6d. net.

*Standard.*—"Worthy in every way to rank as the standard work on a most important subject."

## OXFORD TREASURY OF ENGLISH LITERATURE.

By G. E. HADGW, Tutor in English Literature, Lady Margaret Hall, Oxford; and W. H. HADGW, Fellow of Worcester College, Oxford. 3s. 6d. each.

**Vol. I—OLD ENGLISH TO JACOBÆAN.**

*Tribune.*—"The editors of this volume have performed a difficult task with admirable discrimination. . . . As an introduction to the study of literature, the book can be confidently recommended."

**Vol. II—GROWTH OF THE DRAMA.**

*Educational Times.*—"The historical and critical sketch prefixed to each play is always fresh and pointed, and will be most helpful to the student or the general reader. The plan has been carefully thought out and admirably executed."

**Vol. III—In preparation.**

## PALGRAVE'S GOLDEN TREASURY.

With 80 pages of additional poems to the end of the nineteenth century. From 1s. net.

## ENGLISH SONGS AND BALLADS.

Compiled by T. W. H. CROSLAND. From 1s. net.

## SELECTED ENGLISH ESSAYS.

Chosen and arranged by W. PEACOCK. From 1s. net.

## ENGLISH PROSE FROM MANDEVILLE TO RUSKIN.

Chosen and arranged by W. PEACOCK. From 1s. net.

SELECT LIST OF EDUCATIONAL WORKS (32 PAGES) AND COMPLETE CATALOGUE (144 PAGES) POST FREE.

London: HENRY FROWDE, Oxford University Press, Amen Corner, E.C.

fitting clever and humorous illustrations in the text. The type is strong and clear, and the get-up is bright and agreeable.

Messrs. Methuen also publish (1) *Little Mitchell*, "the story of a mountain squirrel told by himself"; and (2) *The Bee People*—both founded on works by Margaret Warner Morley. The stories are sympathetically told and are full of interest; and the illustrations are numerous and delightful.

*Ray and Fairy*, by L. E. Tiddeman (1s., S.P.C.K.), is a pleasant little story of two children—Raymond aged ten, and Frances aged eight. "They are good children, but they do require a little looking after," was their mother's verdict. Their particular adventures will be read with interest.

*The Whispering Winds and the Tales that they Told*, by Mary H. Debenham (1s. 6d., Blackie), appears in a new edition, with four full-page illustrations and sixteen pictures in the text, by Paul Hardy, and a pretty cover. There are four stories, all of them well worth reading and full of healthy interest.

We welcome cordially a third impression of *Finn and His Companions*, by Standish O'Grady, with a couple of fine illustrations by Jack B. Yeats (1s., Fisher Unwin). It is a charming and instructive volume of "The Children's Library," and is nicely printed and got up. The stories "are, for the most part, stories told to St. Patrick by Caelta, a cousin of Ossian," and are mainly quite new. "If all our Irish Ossianic stories and poems were published," says Mr. O'Grady, "I dare say they would fill a hundred volumes like the present." While these stories are delightful merely as stories, they also illustrate vividly the old times in Ireland and indicate the nature of the great influence exercised by Finn over the Irish mind. "Finn and his friends are believed to have flourished in the second and third centuries."

Collins' Clear Type Press publish, in a series of "Tales for the Children," *The Water Babies*, by Charles Kingsley, with ten illustrations, partly in colours and partly in black and white, by Frank Adams. The get-up is bright and attractive, and the volume is sure to be a favourite.

*The Alphabet of Beasts*, by Beatrice Thompson (2s. 6d. net, Gay & Bird), associates with each letter an animal whose name begins with such letter and pictures it in colours. An introductory "Talk with Children" gives some suitable information about each animal pictured. The children will like the pictures.

*Zoo Babies*—two dozen of them—are boldly and effectively pictured by Cecil Aldin, with "short interviews" (on the opposite page), by G. E. Farrow (3s. 6d., Henry Frowde and Hodder & Stoughton). A handsome book that will delight the children.

Mr. Heinemann publishes *The Happy Annual* (1s. net), some fifty big pages of broadly humorous sketches by Cecil Aldin and John Hassall. Even the advertisements contribute to the fun.

#### FRENCH LITERATURE (HACHETTE).

Messrs. Hachette provide, as usual, a liberal variety of instructive and entertaining volumes for young people. *Mon Journal*—the bound volume for 1906 (7 10 fr.)—is a vast collection of stories, &c., for children of eight to twelve, lavishly and effectively illustrated both in colours and in black and white. It would furnish capital home reading for pupils that have made a sound beginning in the study of French.—*Petite Histoire du Peuple Français*, par Paul Lacombe (5 fr.), gives a broad survey of the history of France in simple language, with eighty illustrations of varied interest.—*Petits Tableaux d'Histoire de France par l'Image*, par Gauthier et Deschamps (3 fr.), is a book of pictures, with brief letterpress—a panorama of French history—very interesting and attractive.—*Mes Premiers Coloriages*, by Mlle H. S. Brès (2 fr.), is an "album illustré de 381 gravures et de 4 planches en couleurs"—"des modèles amusants et variés, à propos desquels Bébé, intéressé et guidé par les textes, devra néanmoins beaucoup regarder les objets autour de lui, pour en imiter les nuances ou la décoration"—a charming volume, whether the lessons be worked out or not.

*La Fille de l'Aiguilleur*, par Pierre Mael (10 fr.), is a stirring story of a girl of thirteen, the scene being laid in the north of Italy. As she is taking home her goats one evening she finds a woman stretched across the railway track: hence a mystery to be elucidated. There are Englishmen in the story, and there is the contrast of crime and innocence. Whether the *dénouement* is probable, notwithstanding King Cophetua, we need not inquire: the events are brisk, the interest is maintained, and the heroine is charming.

*La Sorcière du Vésuve*, par Gustave et Georges Toudouze (6 fr.), is a story of the resistance made in 1808 to French troops by a band of independent Calabrians under the influence of an irreconcilable Italian Meg Merriees, whose husband and son had been killed by the French some years before. "Depuis, entre les Français et moi," she says, "le sang a coulé, le sang des miens, comme la lave du Vésuve entre la montagne et la mer." The French lieutenant possesses an "épervier d'or," which establishes ancient ties and has important bearings on the private story interwoven with the public events. The "Sorcière" is strongly drawn, and the interest is main-

tained by a succession of dramatic situations under the shadow of the burning mountain. Fifty-two illustrations by Ed. Zier.

*L'Enfant de Saint-Marc*, par B. A. Jeanroy (6 fr.), takes the reader back to the middle of the fifteenth century. Cosmo de Medici has just entered the monastery of St. Mark in Florence for a short retreat from the labours of State, when a *condottiere* comes and lays at his feet an infant, supposing him to be a Dominican friar, and not disclosing the relatives of the child. The boy develops a strong artistic faculty; but the main interest lies in the incidents leading to the recognition of his father. His relations with the friars, and especially with his artistic guides, are charmingly depicted; and, while matters of State are adumbrated, there are glimpses of social conditions, the plague intervening with special influence on the story. It is a pretty story, with thirty-six illustrations after drawings by H. Vogel.

The "Bibliothèque Rose Illustrée"—a charming series of simple and attractive stories (3.50 fr. each)—is represented by (1) *L'Oncle Cesar*, par Mme Chéron de la Bruyère, with forty-eight vignettes by Tofani, and (2) *La Famille Grinchu*, par Mlle G. du Planty, with fifty-four vignettes by E. Zier. Each of these authors has already contributed half-a-dozen volumes to this "Bibliothèque," and their new stories need no further commendation.

*L'Enfant Millionnaire*, a translation of Katharina Green's story by J. H. Rosay, with illustrations after drawings by M. Mahut, appears in the agreeable and attractive series "Petite Bibliothèque de la Famille."

All these volumes are spaciouly printed, lavishly illustrated, and handsomely got up; and they are all well written and entertaining. The language is quite simple, presenting no difficulty to English readers that have made a sound beginning in French.

#### OLD FAVOURITES IN NEW STYLES.

A beautiful and attractive issue of Mrs. Gaskell's charming story, *Cranford*, is the new edition with preface by Anne Thackeray Ritchie and illustrations in colour by Hugh Thomson (5s. net., Macmillan). The distinct ve points, we think, are the colouring of the admirable pictures and the new cover design, which is tasteful as well as gorgeous. A very delightful volume.

A similar volume in the "Cranford Series" is George Eliot's *Silas Marner*, with 45 full-page illustrations, 24 coloured, and 21 in black and white, by Hugh Thomson (6s.)—a very beautiful and delightful edition.—Messrs. Macmillan also issue a complete edition of *The Pleasures of Life*, by Lord Avebury (Sir John Lubbock), without illustrations (2s. net)—which should give wide circulation to a very instructive and charming volume.

Such as care less for a grand binding and lavish illustrations and more for good literature in a simple yet agreeable form will find an abundant choice at nominal prices in many excellent series of reprints. For example, here are five capital volumes of "The People's Library" (8d. net each, Cassell): (1) *Robinson Crusoe* (Defoe); (2) *Waverley* (Scott); (3) *Jane Eyre* (Charlotte Brontë); (4) *The Old Curiosity Shop* (Dickens); (5) *Essays*—First and Second Series (Emerson)—all well printed, nicely bound, and incredibly cheap.

Then there is "Nelson's Library" (7d. net each), containing excellent examples of the newer fiction of better quality. At the moment we have (1) *The God in the Car* (Anthony Hope); (2) *The Lady of the Barge* (W. W. Jacobs); (3) *The Odd Women* (George Gissing); and (4) *Matthew Austin* (W. E. Norris)—varied and interesting in treatment and style and very agreeably got up. Very similar, though more modestly bound and still cheaper (6d.), is a handy edition of *Pride and Prejudice* (Jane Austen), also issued by Messrs. Nelson.

"The World's Classics," too, offer ample variety. Even the half-dozen examples that happen to be on our table are varied as well as excellent: (1 and 2) *Gil Blas*, translated by Smollett, with introduction and notes by James Fitzmaurice-Kelly, F.B.A.; (3) *The Three Clerks* (Anthony Trollope), with introduction by W. Teignmouth Shore; (4) *Agnes Grey* (Anne Brontë), with a chronology of the Brontë family; (5) *The Life of John Sterling* (Carlyle), with introduction by Mr. Hale White; and (6) *The Poems of Samuel Taylor Coleridge*, with introduction by A. T. Quiller-Couch. Also, in the handy and agreeable "Pocket Edition," (7) *A Joy for Ever* and *The Two Paths* (Ruskin) in one volume. The publisher is Mr. Henry Frowde (Oxford University Press), and the price is but 1s. net each volume.

"The Red Letter Shakespeare" (1s. 6d. a volume, Blackie) is a very handy and charming edition of the several plays. Here is a chance group of four: (1) *Twelfth Night*, (2) *Cymbeline*, (3) *Antony and Cleopatra*, (4) *Troilus and Cressida*—all with scholarly introductions by E. K. Chambers, the editor of the series. With these we may place the delightful "Red Letter Library" (2s. 6d. net each, Blackie). *Poems by Thomas Hood*, with introduction by Sir F. C. Burnand, represent the poetical division; while *Information and Fancy* (Leigh Hunt), with introduction by Edmund Gosse, and

VIRGIL'S ÆNEID. Book X. Edited, with Introduction, Notes, and Glossary, by H. B. WIDDOWS, M.A. 1s. 4d.

Kindly write for DENT'S COMPLETE EDUCATIONAL CATALOGUE and for Specimen Copies of the above books.

J. M. DENT & CO., 3 Aldine House, Bedford Street, London, W.C.

*Eothen* (Kinglake), with introduction by A. T. Quiller-Couch, represent the prose division. Both the series are very daintily as well as substantially got up.

"The Golden Poets" should not be overlooked. The series by this time counts a dozen volumes, each with a portrait frontispiece and ornamental title-page (both in photogravure by A. S. Hartrick), and with eight illustrations in colour by well known artists (2s. 6d. a volume, Jack). The latest volume is *Poems by Wordsworth* selected by Prof. MacNeile Dixon, M.A., who also furnishes an instructive introduction.

Mr. Henry Frowde has added to his fine series of "Oxford Editions of Standard Authors" (2s. each volume), (1) *Quentin Durward* (Scott), with 16 illustrations, and (2) *Tom Brown's School-Days* (Hughes), with six drawings by H. M. Brock and six other illustrations. Both volumes are liberally furnished forth.

Messrs. Blackie, too, publish a spacious edition of *Quentin Durward*, with four illustrations by J. Jellicoe (2s.). Also, in their popular "Library of Famous Books," a very tastefully got-up edition of Kinglake's *Eothen* (1s.); and a very agreeable edition of Carlyle's *On Heroes, Hero-Worship, and the Heroic in History*, with four illustrations (2s.).

Messrs. Chatto & Windus republish, in the "St. Martin's Illustrated Library of Standard Authors," *The Life of the Fields*, by Richard Jefferies, with twelve illustrations in colours after drawings by Maud U. Clarke (5s. net). The papers furnish varied and delightful reading, full of observation freshly and delicately expressed. The get-up is liberal and artistic, in consonance with the contents.

Other series, of which we do not happen to have specimens at the moment, will recur to our readers as equally suitable for similar occasions.

*Hendricks the Hunter; or, The Border Farm*, by W. H. G. Kingston, appears in a new edition, with illustrations in colour by J. Finnemore (3s. 6d., Henry Frowde and Hodder & Stoughton). It is a stirring tale of Zululand, which should derive fresh interest from the present troubles in that quarter; but, apart from this, it is a capital story.

*The Old Lieutenant and His Son*, by the late Norman Macleod, D.D. (Collins' Clear Type-Press), is a delicious story, which we gladly welcome in a cheap and agreeable form, and with it a wide circulation among young folk.

Collins' Clear-Type Press also publish a handy and useful edition

of *The Poetical Works and Letters of Robert Burns*, with a substantial introduction, notes, and glossary by Robert Ford, and numerous illustrations.

*Famous Fighters of the Fleet*, by Edward Fraser (3s. 6d., Macmillan), shows "glimpses through the cannon smoke in the days of the old navy." It is a stirring record, brightly written and abundantly illustrated, and we are glad to welcome it in a new edition.

*Milly and Olly*, by Mrs. Humphry Ward (6s., Fisher Unwin), reappears in a new edition with a new preface at the psychological moment. It is a charming story for children, narrating the varied events of "a holiday among the mountains" in sunshine and in rain, and when it rains there is story-telling to pass the time pleasantly. There are 48 illustrations by Willy Pogany.

*Favourite Tales*, by Jakob and Wilhelm Grimm (Collins' Clear-Type Press), is a collection of some sixty stories, with many illustrations (some in colour) by T. H. Robinson. A delightful book for the children.

Messrs. Methuen present a fifth and cheaper edition of *From Midshipman to Field-Marshal* (7s. 6d. net)—the autobiography of Sir Evelyn Wood, F.M., D.C.L., V.C., G.C.B., G.C.M.G., &c., with 29 illustrations and maps. The personal record touches the more important events of the past sixty years, and is full of interest and charm, especially, of course, on the military side. It affords a fine example of a chivalrous spirit and of a laborious and useful career.

Mr. Fisher Unwin issues a third impression of *John Chinaman at Home*—"Sketches of Men, Manners, and Things in China"—by the Rev. E. J. Hardy, M.A., Chaplain to H.B.M. Forces, with 36 full-page illustrations (5s. net). Mr. Hardy is a shrewd observer, and he is well known also as a humorous and piquant writer. "Only the everyday celestial things that interested and puzzled me when I first came out," he says, "have been described. It is a book for unlearned visitors to China." And it will tell a great deal about China and the Chinese to those of us that stay at home. An extremely interesting, instructive, and vivid book.

Mr. Clay issues from the Cambridge University Press Warehouse *The Easy Reference Bible* (2s. 6d. net, in French, Yapp, Morocco grain)—a very handy edition, substantially and beautifully got up. The special feature of it is that, in addition to the usual numbering of the chapters of each book, all the chapters of the Bible are numbered consecutively from Genesis i. to Revelation xxii. (1 to 1,189). This additional method of numbering the chapters will facilitate reference. The idea is good.

**MATHEMATICS.**

**16295.** (Professor SANJANA, M.A.)—Prove that three nearly equal factors of the number  $150^{18} + 1$  are 11375447620501, 11390625000001, 11405822629501. Also further factorize these numbers. [See *Reprint*, New Series, Vol. x., pp. 36, 37.]

*Solutions* (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.; (II.) by the PROPOSER and JAMES BLAIKIE, M.A.

$$(I.) (N) = \frac{150^{18} + 1}{150^6 + 1} \cdot \frac{150^6 + 1}{150^2 + 1} \cdot (150^2 + 1) = N_3, N_1, N_0 \text{ (suppose).}$$

Then  $N_0 = 150^2 + 1 = 22501$  (a prime).

Also, if  $N = (x^6 + y^6)/(x^2 + y^2)$ , where  $x = \xi^2$ ,  $y = b\eta^2$ .

Then  $N = L \cdot M$ , where  $L = P - Q$ ,  $M = P + Q$

$$P = (x^2 + 3xy + y^2), \quad Q = 6\xi\eta(x + y).$$

Now take  $x = 1$ ,  $y = 150 = 6 \cdot 5^2$ ; so that  $\xi = 1$ ,  $\eta = 5$ .

Then (for  $N_1$ );  $P_1 = 1 + 450 + 150^2 = 22951$ ;  $Q = 6 \cdot 5 \cdot 151 = 4530$ .

Hence  $N_1 = L_1 \cdot M_1 = 18421 \cdot 27481 = (13 \cdot 13 \cdot 109) \cdot (27481)$ .

Again, take  $x = 1$ ,  $y = 150^3 = 6 \cdot 750^2$ ; so that  $\xi = 1$ ,  $\eta = 750$ .

Then (for  $N_3$ );  $P_3 = 1 + 3 \cdot 150^3 + 150^6 = 11390635125001$ ,

$$Q_3 = 6 \cdot 750(1 + 150^3) = 15187504500.$$

Hence  $L_3 = 11375447620501$ ,  $M_3 = 11405822629501$ .

Hence  $L_3, N_1, N_0, M_3$  are the three large factors quoted by the Proposer.

The writer has compiled a table of solutions ( $y$ ) of the congruence

$$(y^2 + 1)/(y^3 + 1) \equiv 0 \pmod{p \text{ and } p^r}$$

for all moduli  $p$  and  $p^r > 10000$ . Taking  $y = 150^2$ , this table gives 37, 1297, 8461 as divisors of  $N_3$ , and no more divisors  $< 10000$ . Hence, by division into  $L_3, M_3$

$$L_3 = 1297 \cdot 8770584133, \quad M_3 = 37 \cdot 8461 \cdot 36433693.$$

Here, as  $N_3$  is now known to contain no more divisors  $< 10000$ , the large factor in  $M_3$  must be prime. The writer has no tables suitable for further testing the large factor in  $L_3$ .

Thus the last number ( $N$ ) (of 41 figures) has been resolved into prime factors, except for the 10-figure factor in  $L_3$ , which is doubtful.

(II.) If  $x$  be of the form  $6y^2$ , we have at once

$$\begin{aligned} x^{18} + 1 &= (x^6 + 1)(x^{12} - x^6 + 1) = (x^6 + 1)\{(x^6 + 3x^3 + 1)^2 - 6x^3(x^3 + 1)^2\} \\ &= (x^6 + 1)\{(x^6 + 3x^2 + 1)^2 - 36x^2y^2(x^3 + 1)^2\} \\ &= (x^6 + 1)(x^6 + 3x^3 + 1 - 6x^3y - 6xy)(x^6 + 3x^3 + 1 + 6x^3y + 6xy). \end{aligned}$$

Putting  $x = 150 = 6 \cdot 25$ , and consequently  $y = 5$ , we shall get the three numbers in the Question.

Of course  $x^6 + 1$  is similarly decomposable; so that we get

$$\begin{aligned} 150^{18} + 1 &= 22501 \cdot 18421 \cdot 27481 \cdot 11375447620501 \cdot 11405822629501 \\ &= 13^2 \cdot 109 \cdot 22501 \cdot 27481 \cdot 37 \cdot 308265476473 \cdot 11375447620501. \end{aligned}$$

**16282.** (R. F. WHITEHEAD, B.A.)—If  $(l, m, n, \lambda, \mu, \nu)$  be the six coordinates of a line so that  $(l, m, n)$  are its direction cosines,  $(x, y, z)$  any point on it, and  $ny - mz = \lambda$ ,  $lz - nx = \mu$ ,  $mx - ly = \nu$ , the line will be a generator of a quadric (1) similar and coaxial with

$$x^2/a + y^2/b + z^2/c = 1, \text{ if } a\lambda/l = b\mu/m = c\nu/n,$$

(2) confocal with the same quadric, if

$$[(b-c)l/\lambda + \lambda/l]^2 = [(a-c)m/\mu + \mu/m]^2, \dots,$$

three equations equivalent to two independent conditions. The latter is also the condition that the line  $(l, m, n, \lambda, \mu, \nu)$  is one of the focal lines to a tangent cone from some point to one of the system of confocals (Salmon, § 175). Both sets of conditions are satisfied if the line is a generator of the original quadric.

*Solution* by A. M. NESBITT, M.A.

If  $(x + lp, y + mp, z + np)$  lies on  $x^2/a + y^2/b + z^2/c = k$  for all values of  $p$  and some particular value of  $k$ , we have at once

$$l^2/a + m^2/b + n^2/c = 0, \quad lx/a + my/b + nz/c = 0,$$

whence  $(l/a)/(mz - ny) = \dots = \dots$  or  $l/a\lambda = m/b\mu = n/c\nu$ .

If the same point lies on  $x^2/(a + \theta) + y^2/(b + \theta) + z^2/(c + \theta) = 1$ , we get

$$l^2/(a + \theta) + m^2/(b + \theta) + n^2/(c + \theta) = 0, \quad lx/(a + \theta) + my/(b + \theta) + nz/(c + \theta) = 0.$$

whence  $l/[\lambda(a + \theta)] = m/[\mu(b + \theta)] = n/[\nu(c + \theta)] = -1/\phi$  say.

Eliminating  $\theta, \phi$ , we have

$$(b-c)l/\lambda + (c-a)m/\mu + (a-b)n/\nu = 0,$$

which is not the condition we are asked to establish.

The PROPOSER writes:—"I have to remark that the Solver has not, in the second part of the question, used the condition  $x^2/(a + \theta) + \dots = 1$ , so that he has, of course, obtained only one consequent condition instead of my two."

**16294.** (M. V. ARUNACHALAN, M.A.)—Prove that

$$R_1 - \frac{nR_2}{2!} + \frac{n(n-1)R_3}{3!} - \dots \text{ to } (n+1) \text{ terms} = \frac{1}{(n+1)^2},$$

where  $R_n = 1 + \frac{1}{2} + \frac{1}{3} + \dots + 1/n$ .

*Solutions* (I.) by S. T. SHOVELTON, M.A., and another; (II.) by F. W. REEVES, M.A.

$$(I.) \quad R_1x + R_2x^2 + R_3x^3 + \dots = \frac{x}{1-x} + \frac{1}{2} \frac{x^2}{1-x} + \frac{1}{3} \frac{x^3}{1-x} + \dots$$

$$= \frac{-1}{1-x} \log(1-x) \text{ (if } x < 1) \dots \dots \dots (1),$$

$$1 - (n+1)x + {}^{n+1}C_2x^2 - \dots + (-1)^{n+1}C_nx^n + (-1)^{n+1}x_{n+1} = (1-x)^{n+1} \dots \dots \dots (2).$$

By taking the coefficient of  $x^{n+1}$  in the product of the left-hand sides of (1) and (2), we obtain

$$\begin{aligned} &(-1)^n [(n+1)R_1 - {}^{n+1}C_2R_2 + \dots \text{ to } (n+1) \text{ terms}] \\ &= \text{coefficient of } x^{n+1} \text{ in } -(1-x)^n \log(1-x) \\ &= \frac{1}{n+1} - \frac{1}{n} + \frac{1}{n-1} - \frac{n(n-1)}{2!} - \dots + (-1)^n \\ &= \frac{1}{n+1} [(1-1)^{n+1} - (-1)^{n+1}]; \end{aligned}$$

therefore, &c. (Rest in *Reprint*.)

**16297.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Show how to find any number ( $n$ ) of dissimilar right-angled triangles of equal perimeter with their sides  $a, b, c$  expressible in integers. Find the lowest solution when  $n = 2, 3, 4$ .

*Solutions* (I.) by R. W. D. CHRISTIE; (II.) by JAMES BLAIKIE, M.A.

(I.) Utilising the formula

$$[m(2n+m)]^2 + [2n(m+n)]^2 = [(m+n)^2 + n^2]^2,$$

or its more extended form, and taking small values of  $m, n$ , we get for the legs, hypotenuse, and perimeter:—

$$(1) \quad 3, 4, 5 = 12, \quad (2) \quad 5, 12, 13 = 30, \quad (3) \quad 8, 15, 17 = 40,$$

$$(4) \quad 7, 24, 25 = 56, \quad (5) \quad 12, 25, 37 = 84.$$

Now, bringing (1), (2) to their L.C.M., we get for  $n = 2$ ,

$$10, 24, 26 = 60, \quad 15, 20, 25 = 60.$$

Again, for  $n = 3$ , we may use (1), (2), (3). Thus

$$30, 40, 50 = 120, \quad 20, 48, 52 = 120, \quad 24, 45, 51 = 120.$$

Again, for  $n = 4$ , we may use (1), (2), (3), (5) or (1), (3), (4), (5), thus

$$\begin{array}{ll} 210, 280, 350 = 840 & 210, 280, 350 = 840, \\ 140, 336, 364 = 840 & \text{or } 168, 315, 357 = 840, \\ 168, 315, 357 = 840 & 105, 360, 375 = 840, \\ 350, 120, 370 = 840 & 350, 120, 370 = 840. \end{array}$$

This theorem may be extended in two ways either by the use of the more extended form or as follows:—

$$\text{Let } p^2 - 2q^2 = -1.$$

Here  $p_{2n+1} = 1, 7, 41, 239, \dots$  (law  $p_{2n+3} = 6p_{2n+1} - p_{2n-1}$ ),  
 $q_{2n+1} = 1, 5, 29, 169, \dots$  (same law).

Now, by laws which have been frequently proved in the *Educational Times* and elsewhere, we have

$$\left(\frac{p_{2n+1}-1}{2}\right)^2 + \left(\frac{p_{2n+1}+1}{2}\right)^2 = q_{2n+1}^2 \text{ perimeter.}$$

$$\text{Ex. } n = 1, \quad \left(\frac{7-1}{2}\right)^2 + \left(\frac{7+1}{2}\right)^2 = 5^2 = q_{2n}^2 = 12,$$

$$n = 2, \quad \left(\frac{41-1}{2}\right)^2 + \left(\frac{41+1}{2}\right)^2 = 29^2 = q_{2n+2}^2 = 70,$$

ad inf. ad inf.

v. Questions 16280, 15757, &c.

(II.) Let  $a = k(p^2 + q^2)$ ,  $b = k(p^2 - q^2)$ ,  $c = 2kpq$ , then  $a^2 = b^2 + c^2$  and  $a + b + c = 2kp(p + q)$ .

If, then,  $a + b + c = a' + b' + c'$ , we must have  $kp(p + q) = k'p'(p' + q')$ , when  $p > q$ . Thus, if  $n = 2$ , we may take

$$kp(p + q) = 5 \times 2 \times 3 = 2 \times 3 \times 5 = k'p'(p' + q'),$$

whence  $a = 25$ ,  $b = 20$ ,  $c = 15$ ;  $a' = 26$ ,  $b' = 24$ ,  $c' = 10$ ; perimeter = 60. If  $n = 3$ , we have the identities

$$10 \times 2 \times 3 = 3 \times 4 \times 5 = 4 \times 3 \times 5;$$

giving the triangles 50, 40, 30; 51, 45, 24; 52, 48, 20; perimeter = 120.

If  $n = 4$ ,  $6 \times 7 \times 8 = 7 \times 6 \times 8 = 4 \times 7 \times 12 = 1 \times 16 \times 21$ ;

(Continued on page 36.)

## COLLEGE OF PRECEPTORS, 1908, and OXFORD AND CAMBRIDGE LOCALS, 1908

MESSRS. J. M. DENT & CO. have pleasure in bringing before your notice their Editions of the following Books prescribed for the Oxford and Cambridge Local and the College of Preceptors' Examinations, 1908. Detailed Lists may be had post free on application:—

### LATIN AND GREEK.

- CÆSAR'S GALLIC WAR. Book I.** Edited by A. S. WILKINS, LL.D., Litt.D., late Professor of Latin, Victoria University, Manchester. 1s. 4d.  
[Oxford Junior and Senior and College of Preceptors.]
- CÆSAR'S GALLIC WAR. Books II. and III.** in One Volume. Edited by A. CROOM PATTERSON, M.A. (Edin. and Oxon.), Classical Master in the High School, Edinburgh. 1s. 4d.  
[Oxford Senior, Cambridge Junior, and College of Preceptors.]
- VIRGIL'S ÆNEID. Book I.** Edited, with Introduction, Notes, and Glossary, by Rev. H. KYNASTON, D.D. 1s. 4d.  
[Oxford Junior and Senior and College of Preceptors.]
- VIRGIL'S ÆNEID. Book II.** Edited, with Introduction, Notes, and Glossary, by R. J. HUGHES, M.A. 1s. 4d.  
[Oxford Senior.]
- VIRGIL'S ÆNEID. Book X.** Edited, with Introduction, Notes, and Glossary, by H. B. WIDDOWS, M.A. 1s. 4d.  
[Cambridge Junior and Senior and College of Preceptors.]
- THE ODES OF HORACE.** Edited by Dr. JOHN MARSHALL, M.A. Containing Introduction, Latin Text, interleaved page by page, with the English Translation, Notes, and Glossary, in One Volume. 2s. 6d. net.  
[Oxford Senior, Cambridge Senior.]
- PLATO.—THE APOLOGY OF SOCRATES.** Edited by F. M. STAWELL. Containing the Greek Text, interleaved, page by page, with the English Translation, Introduction, Notes, and Glossary, in One Volume. 2s. 6d. net.  
[Cambridge Senior.]

### MODERN LANGUAGES.

- GERMAN DAILY LIFE.** By Dr. R. KRON. Extra fcap. 8vo. 2s. 6d. net.
- FRENCH DAILY LIFE.** By Dr. R. KRON. Extra fcap. 8vo. 2s. 6d. net.
- (The above two books are prescribed by the College of Preceptors for the Oral Examination in French and German.)

### ENGLISH.

- SCOTT.—MARMION.** Edited by the Rev. E. P. DAVIDSON, M.A. (Oxon.), Assistant Master, Malvern College. With Biography, Topographical Drawings, Introduction, copious Notes, and Glossary. Crown 8vo. cloth. 1s. 4d.  
[Oxford Junior and Senior, Camb. Prelim. and Junior and C.P.]
- SCOTT.—QUENTIN DURWARD.** 1s. net.  
[Cambridge Junior.]
- SCOTT.—OLD MORTALITY.** 1s. 4d.  
[Oxford Junior and Senior.]
- KINGSLEY.—THE HEROES.** Edited by OLIPHANT SMEATON, M.A. With Introduction and Notes. 8 Illustrations by T. H. ROBINSON. Fcap. 8vo. cloth. 1s. 4d.  
[Cambridge Preliminary.]
- KINGSLEY.—WESTWARD HO!** With an Introduction by A. J. GRIEVE, M.A. 1s. net.  
[Oxford Junior.]
- SHAKESPEARE.—THE MERCHANT OF VENICE.** Edited by R. M. WILLIAM, M.A. With 8 Illustrations by DORA CURTIS. 1s. 4d.  
[Oxford Junior, Camb. Junior and Senior, and Coll. of Preceptors.]
- SHAKESPEARE.—CORIOLANUS.** (Temple Shakespeare.) Edited by Prof. GOLLANZ, M.A. 1s. 6d. net.  
[Cambridge Senior.]
- LAMB'S TALES FROM SHAKESPEARE.** With Illustrations by ARTHUR RACKHAM, A.R.W.S. 1s. net.  
[Oxford Preliminary.]
- DEFOE.—ROBINSON CRUSOE.** With Illustrations by AYTON SYMINGTON. 1s. net.  
[Oxford Preliminary.]
- LONGFELLOW.—THE SONG OF HIAWATHA.** Edited, with Introduction and Notes, by HENRY WILLIAMS, M.A. 1s.  
[Oxford Preliminary and College of Preceptors.]
- NORTH'S TRANSLATION OF PLUTARCH'S CÆSAR.** With Notes and Vocabulary. Edited by W. H. D. ROUSE, Litt.D. Cloth. 1s. 6d. net.  
(The Temple Plutarch, Vol. VII.) [Oxford Junior and Senior.]
- SHAKESPEARE.—JULIUS CÆSAR.** Edited by F. ARMYTAGE MORLEY, M.A., D.C.L. With Illustrations by T. H. ROBINSON. 1s. 4d.  
[Oxford Junior and Senior and College of Preceptors.]
- SHAKESPEARE.—RICHARD II.** Edited by W. KEATH LEASK, M.A. With Illustrations by DORA CURTIS. 1s. 4d.  
[Oxford Junior and Senior.]
- MILTON.—"COMUS," "LYCIDAS," "L'ALLEGRO," "IL PENNEROSO," and "SONNETS."** With a Glossary. 1s. 6d. net.  
[Oxford Senior and College of Preceptors.]
- BACON.—THE ESSAYS.** With an Introduction and Glossary by OLIPHANT SMEATON, M.A. 1s. net.  
[Oxford Senior.]

Principals are invited to apply for Dent's COMPLETE EDUCATIONAL CATALOGUE and for SPECIMEN COPIES of the above books.

J. M. DENT & CO., 3 Aldine House, Bedford Street, London, W.C.

## From GINN & COMPANY'S LIST.

- ELEMENTARY FRENCH.** A Text-Book for Beginners. By FRED D. ALDRICH and IRVING L. FOSTER. An outgrowth of "Foundations of French," by the same authors. The scope and the general arrangement of the earlier volume, which have met with general approval, have been retained in this book, and such incidental changes as class-room use has suggested have been made in the text. 350 pages. 4s. 6d.
- FÉVAL'S LA FÉE DES GRÈVES.** Edited by G. H. C. HAWTREY. An interesting story of Normandy in the fifteenth century. With Introduction, Notes, Re-translation Exercises, and Vocabulary. 266 pages. 3s.
- AN INTRODUCTION TO THE HISTORY OF WESTERN EUROPE.** By J. H. ROBINSON. Gives a clear and interesting account of the all-important movements, customs, institutions, and achievements of Western Europe since the German barbarians conquered the Roman Empire. 714 pages, with Maps and Illustrations. Price 7s. 6d. Also in Two Volumes, dividing at the sixteenth century. Price 4s. 6d. each.
- READINGS IN EUROPEAN HISTORY.** Selections follow chapter by chapter the history given above, and are culled from all sources—chronicles, memoirs, letters, as well as State papers—thus giving the liveliest sense of reality to current events and personages. Vol. I., 582 pages, price 7s. Vol. II., 660 pages, price 7s. Abridged Edition, in One Volume, 607 pages, price 7s.
- THE DEVELOPMENT OF MODERN EUROPE DURING THE LAST TWO HUNDRED YEARS.** An Introduction to Current History. By JAMES HARVEY ROBINSON and CHARLES A. BEARD. This volume will meet the demand for a history of recent times which shall explain the social and economic as well as the political development of our own age, and shall also prepare the student to understand the great problems of the world in which he finds himself. 374 pages. 6s. 6d.
- ELEMENTS OF GEOLOGY.** By W. H. NORTON. The essentials of Geology treated with fulness and ample illustration for beginners. Illustrated. 461 pages. 6s. 6d.
- A TEXT-BOOK IN GENERAL ZOOLOGY.** By HENRY R. LINVILLE and HENRY A. KELLY. An exposition of the Science of Zoology, presented without the interpolation of a Laboratory Guide. Fully illustrated. 462 pages. 7s. 6d.
- THE HUMAN MECHANISM: its Physiology and Hygiene, and the Sanitation of its Surroundings.** By T. HUGH and W. T. SEDGWICK. In this work prominence is given to Hygiene and the Elements of Sanitation—a subject of the first importance in all wholesome modern living. Illustrated. 564 pages. 8s. 6d.
- HOW TO KEEP WELL.** By A. F. BLAISDELL. Simple, teachable, and replete with suggestions for Teachers. Illustrated. 271 pages. 2s.
- PHYSICAL GEOGRAPHY.** By WILLIAM MORRIS DAVIS. A scholarly, practical Text-book, emphasising man's physical environment as determinant of man's social and political modes of life. 428 pages. Contains many Illustrations and Maps. Price 5s. 6d.
- ELEMENTARY PHYSICAL GEOGRAPHY.** By WILLIAM MORRIS DAVIS. Based on the Author's "Physical Geography," with the addition of Practical Exercises and more space devoted to the Atmosphere. 401 pages. Fully Illustrated. Price 5s. 6d.

COMPLETE CATALOGUE POST FREE ON APPLICATION. BOOKS SENT ON APPROVAL TO TEACHERS.

GINN & COMPANY, ST. MARTIN'S STREET, LONDON, W.C.

giving triangles 300, 288, 84; 280, 224, 168; 296, 280, 96; 281, 231, 160. Observe that when  $n$  is 8, we reject  $k = 1, p = 5, p + q = 6$ , as that would give the same triangle as  $k = 2, p = 3, p + q = 5$ , though in a reversed position; similarly, when  $n = 4$ , we reject  $k = 3, p = 8, p + q = 14$ , as that gives the same triangle as  $k = 6, p = 7, p + q = 8$ .

[Rest in Reprint.]

**16308.** (Professor R. W. GENESE, M.A.)—The moment of inertia of a thin rod, the density at any point of which varies as the product of its distances from the ends, about any line in space is equal to that of three particles, one at each end of  $\frac{1}{10}$  of the whole mass and one in the middle of  $\frac{2}{5}$ .

Solutions (I.) by "SOLIDUS"; (II.) by Professor NANSON.

(I.) This is an extreme case of the well known equimomental point-system for a solid tetrahedron, viz.,  $\frac{1}{4}$  of the mass at the centroid, and  $\frac{1}{20}$  at each corner. If two opposite edges be mutually perpendicular, and also perpendicular to the line joining their mid-points, and if they are then made to diminish indefinitely while the other edges remain finite, there results a thin rod whose cross-sectional area is proportional to the product of its distances from the ends, and this rod is equivalent to that of the Question.

(II.) From the ordinary formulæ for the principal moments of inertia of a homogeneous ellipsoid, it is obvious that that solid is equimomental with seven particles, one of  $\frac{1}{10}$  of its mass at each extremity of each principal diameter, and one of  $\frac{2}{5}$  of its mass at the centre. Now taking two of the said diameters indefinitely small, we get a fine rod in which the density varies as the product of the distances from the ends, and the result stated therefore follows.

**16286.** (H. L. TRACHTENBERG, B.A.)—If A, B are two given points, prove that there are four points P such that PA, PB are each bisected by a given conic.

Solution by HENRY RIDDELL, M.E.

The enunciation of this theorem can be very widely extended, but even at its greatest extension is almost self-evident.

If there be any two points A and B, there exist  $mn$  points P such that PA is divided in any fixed ratio  $1/k$  by a given  $n$ -ic curve, while PB is divided also in a fixed ratio  $1/l$  by a given  $m$ -ic.

It is evident that the locus of the extremity of AP is a curve similar and similarly placed to the given curve, and in like manner for the extremity of BP.

But these curves intersect in  $mn$  points, which may be all real, all imaginary, or part real and part imaginary. Where only one curve is used, as in the Question set, the two loci are similar and similarly placed, so that the intersections cannot be all real. In the case of a conic it is possible to have two real and finite, and two are always the two points of intersection with the line at infinity of the two pairs of parallel asymptotes.

**16314.** (Professor E. B. ESCOTT.)—Show that

$$2^{n-1} - 1 \equiv 0 \pmod{n},$$

when  $n = 5.7.17.19.37.73.97.109.241.433.673.38737$ .

Are there any values of  $n$  satisfying the same congruence having more than twelve factors?

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

The Proposer has himself given the general rules for forming these numbers ( $n$ ) in a short paper on "The Converse of Fermat's Theorem," in *Messenger of Math.*, Vol. xxxvi., 1907, pp. 175, 176. The rules given are shortly that—

If  $n = p_1 p_2 p_3 \dots$  and  $2^{a_1} \equiv 1 \pmod{p_1}, 2^{a_2} \equiv 1 \pmod{p_2}, \dots$ , where  $a_1, a_2, \dots$  are Haupt exponents, i.e., the least possible in each case, then

- (1) every  $p$  must be prime to every  $a$ ,
- (2)  $n$  must  $\equiv +1 \pmod{\text{every } a}$ .

Fifty-four examples are given in that paper, including the very one here set. As the factors ( $p$ ) satisfy all the conditions above, no further proof is needed.

Let  $f(2^a \mp 1)$ , denote the algebraic prime factors of  $(2^a \mp 1)$ , where  $q$  is odd. Then  $n = f(2^a - 1) f(2^a + 1)$  is a number satisfying all the conditions. These often contain 5 or 6 factors.

Example.—  $q = 29, 47, 51, 53, 55, 59, 81, 105$ ,

Number of factors 5, 5, 6, 5, 6, 5, 6, 6.

When  $q = 83$ ,  $n$  has at least 7 factors.

It is not easy to find numbers ( $n$ ) containing more than 6 factors (the paper quoted gives 7 cases). But Fermat's numbers ( $F_r$ ) give an easy case of forming numbers ( $n$ ) with any number of factors.

Thus  $n = F_3 F_4 F_5 F_6 F_7$  has at least 7 factors,  $n = F_4 F_5 F_6 \dots F_{12}$  has

at least 14 factors,  $n = F_1 F_2 \dots F_{r+1}$  has at least  $(r+1)$  factors. Here the leading number ( $F_r$ ) must be such that

$$F_r = 2^{r-1} + 1 \equiv +1 \pmod{2^{r(r+1)}},$$

upon which all the conditions will be satisfied. Note that  $F_3, F_6$  are each known to have 2 factors each.

The PROPOSER solves the Question as follows:—

Let  $a$  represent the smallest exponent of 2 for which

$$2^a - 1 \equiv 0 \pmod{p},$$

then we have the following table of primes and exponents:—

$p$	$a$	$a$	$p$	$a$
5	4	37	241	24
7	3	73	433	72
17	8	97	673	48
19	18	109	38737	72

The lowest common multiple of the  $a$ 's is  $144 = 9.16$ . Since the product of the  $p$ 's is  $\equiv 1 \pmod{9}$  and  $16$ , it follows that

$$n = 5.7.17.19 \dots \equiv 1 \pmod{144};$$

and therefore  $n-1$  is a multiple of all the  $a$ 's. From this it follows that

$$2^{n-1} - 1 \equiv 0 \pmod{n}.$$

**16172.** (Professor COCHEZ.)—Trouver le maximum de  $\sin x - p \sin y$ , sachant que  $\tan \frac{1}{2}x \tan \frac{1}{2}y = p$ .

Solution by C. M. ROSS.

Let  $u = \phi(x, y) = \sin x - p \sin y$ ,  $f(x, y) = \tan \frac{1}{2}x \tan \frac{1}{2}y - p = 0$ , then

$$\frac{\partial \phi}{\partial x} = \cos x, \quad \frac{\partial \phi}{\partial y} = -p \cos y;$$

$$\frac{\partial f}{\partial x} = \frac{1}{2} \sec^2 \frac{1}{2}x \tan \frac{1}{2}y, \quad \frac{\partial f}{\partial y} = \frac{1}{2} \tan \frac{1}{2}x \sec^2 \frac{1}{2}y.$$

Now  $\frac{du}{dx} = (\partial \phi / \partial x) / (\partial f / \partial x) - (\partial \phi / \partial y) / (\partial f / \partial y)$ .

But the maximum and minimum values of  $u$  satisfy the equation  $du/dx = 0$ , hence the equations

$$f(x, y) = 0 \quad \text{and} \quad \partial \phi / \partial x \partial f / \partial y - \partial \phi / \partial y \partial f / \partial x = 0,$$

which reduce to

$$\cos x \tan \frac{1}{2}x \sec^2 \frac{1}{2}y + p \cos y \tan \frac{1}{2}y \sec^2 \frac{1}{2}x = 0 \dots \dots \dots (1),$$

$$\tan \frac{1}{2}x \tan \frac{1}{2}y - p = 0 \dots \dots \dots (2),$$

give maximum and minimum values.

From (2),  $\tan \frac{1}{2}y = p / \tan \frac{1}{2}x$ . Substituting this value in (1), it becomes

$$\tan^4 \frac{1}{2}x - (p^2 + 1) \tan^2 \frac{1}{2}x - 3p^2 = 0;$$

therefore  $\tan \frac{1}{2}x = \left\{ \frac{1}{2} [(p^2 + 1) \pm \sqrt{(p^4 + 14p^2 + 1)}] \right\}^{\frac{1}{2}};$

therefore  $\tan \frac{1}{2}y = p / \left\{ \frac{1}{2} [(p^2 + 1) \pm \sqrt{(p^4 + 14p^2 + 1)}] \right\}^{\frac{1}{2}}.$

$$\begin{aligned} \text{Now } u &= \sin x - p \sin y = \frac{2 \tan^2 \frac{1}{2}x (1 - p^2)}{(1 + \tan^2 \frac{1}{2}x) (p^2 + \tan^2 \frac{1}{2}x)} \\ &= \frac{2\sqrt{2} (1 - p^2) [p^2 + 1 + \sqrt{(p^4 + 14p^2 + 1)}]^{\frac{1}{2}}}{[p^2 + 3 + \sqrt{(p^4 + 14p^2 + 1)}] [3p^2 + 1 + \sqrt{(p^4 + 14p^2 + 1)}]} \end{aligned}$$

N.B.—The positive sign before the radical is taken, as it gives a maximum.

**16274.** (Professor NEUBERG.)—Intégrer l'équation

$$ap^3 + bp^2 = (3ay + 2bx + c)^2 \quad (y = dy/dx).$$

Solution by S. T. SHOVELTON, M.A.

$$ay^2 + by^2 = (3ay + 2bx + c)^2;$$

therefore  $(3ap^2 + 2bp) dp/dx = 2(3ay + 2bx + c)(3ap + 2b);$

therefore (1)  $3ap + 2b = 0$ , whence  $3ay + 2bx + c = 0$ . By substitution in the original equation  $\kappa$  is found to be  $c \pm \frac{2b}{3a} \sqrt{\frac{b}{3}}$ .

$$p(dp/dx) = 2(3ay + 2bx + c);$$

therefore  $p^2 (dp/dx)^2 = 4p^2 (ap + b);$

therefore  $(dp/dx)^2 = 4(ap + b)$  or  $ap + b = (ax - \kappa)^2,$

where  $\kappa$  is a constant; therefore

$$ay = \frac{1}{3} a^2 x^3 - a\kappa x^2 + (\kappa^2 - b)x + l,$$

where  $l$  is a constant. Substituting in the original equation it is found that  $al + \kappa^3 + ac = b\kappa$ ; therefore the solutions are

$$(1) \quad 3ay + 2bx + \kappa = 0,$$

$$(2) \quad 3a^2 y = a^2 x^3 - 3a^2 \kappa x^2 + 3(\kappa^2 - b)ax + (b\kappa - \kappa^3 - ac),$$

where  $\kappa$  is an arbitrary constant.

**16306.** (C. F. YOUNGMAN, M.A.)—Prove that in the hyperbola which subtends an angle of  $60^\circ$  at its centre no finite equilateral triangle can be inscribed. Is this an isolated case or part of a general theorem?

Solution by M. S. NARAYANA, M.A.

Let the equation to the hyperbola be  $xy = c^2$ , the axes being in-

J. M. DENT & CO., 3 Aldine House, Bedford Street, London, W.C.

clined at 60°. Let P, Q, R, the angular points of the inscribed equilateral triangle, be  $t_1, t_2, t_3$  respectively. Equation to PQ is

$$x + yt_1t_2 = c(t_1 + t_2),$$

equation to PR is

$$x + yt_1t_3 = c(t_1 + t_3);$$

therefore

$$\tan \angle QPR \equiv \tan 60^\circ$$

$$= \frac{[-(1/t_1t_2 + 1/t_1t_3) \sin 60^\circ] / [1 - (1/t_1t_2 + 1/t_1t_3) \cos 60^\circ + 1/t_1^2t_2t_3];$$

therefore

$$t_1^2t_2t_3 - t_2 + 1 = 0 \dots \dots \dots (1).$$

Similarly

$$t_1t_2^2t_3 - t_3 + 1 = 0 \dots \dots \dots (2),$$

$$t_1t_2t_3^2 - t_1 + 1 = 0 \dots \dots \dots (3).$$

From (1), (2), (3), we have

$$(t_2 - t_3)/(t_3 - t_1) = (t_3 - t_1)/(t_1 - t_2) = (t_1 - t_2)/(t_2 - t_3) = 0/0.$$

Showing that  $t_1 = t_2 = t_3$  which is impossible, or that each is infinitely large. Hence no finite equilateral triangle can be inscribed in the hyperbola which subtends an angle of 60° at the centre.

16276. (C. M. Ross.)—If

$$\begin{vmatrix} \sin 2\theta & \cos \theta & \sin \theta & 1 \\ \sin 2\phi & \cos \phi & \sin \phi & 1 \\ \sin 2\psi & \cos \psi & \sin \psi & 1 \\ \sin 2\chi & \cos \chi & \sin \chi & 1 \end{vmatrix} = 0,$$

and if  $\theta, \phi, \psi, \chi$  are different positive angles each less than  $2\pi$ , prove that  $\theta + \phi + \psi + \chi = n\pi$  ( $n$  an odd integer).

Solution by the PROPOSER.

Subtracting the first row from each of the other rows,

$$\begin{aligned} \Delta &= \begin{vmatrix} \sin 2\phi - \sin 2\theta & \cos \phi - \cos \theta & \sin \phi - \sin \theta & 0 \\ \sin 2\psi - \sin 2\theta & \cos \psi - \cos \theta & \sin \psi - \sin \theta & 0 \\ \sin 2\chi - \sin 2\theta & \cos \chi - \cos \theta & \sin \chi - \sin \theta & 0 \end{vmatrix} \\ &= -8 \sin \frac{1}{2}(\phi - \theta) \sin \frac{1}{2}(\psi - \theta) \sin \frac{1}{2}(\chi - \theta) \\ &\quad \times \begin{vmatrix} \cos \frac{1}{2}(\phi - \theta) \cos(\phi + \theta) & \sin \frac{1}{2}(\phi + \theta) & \cos \frac{1}{2}(\phi + \theta) \\ \cos \frac{1}{2}(\psi - \theta) \cos(\psi + \theta) & \sin \frac{1}{2}(\psi + \theta) & \cos \frac{1}{2}(\psi + \theta) \\ \cos \frac{1}{2}(\chi - \theta) \cos(\chi + \theta) & \sin \frac{1}{2}(\chi + \theta) & \cos \frac{1}{2}(\chi + \theta) \end{vmatrix} \\ &= -8 \sin \frac{1}{2}(\phi - \theta) \sin \frac{1}{2}(\psi - \theta) \sin \frac{1}{2}(\chi - \theta) \\ &\quad \times [\cos \frac{1}{2}(\phi - \theta) \cos(\phi + \theta) \sin \frac{1}{2}(\psi - \theta) \cos(\psi + \theta) \sin \frac{1}{2}(\chi - \theta) \\ &\quad + \cos \frac{1}{2}(\chi - \theta) \cos(\chi + \theta) \sin \frac{1}{2}(\phi - \theta) \cos(\phi + \theta) \sin \frac{1}{2}(\psi - \theta)] = 0. \end{aligned}$$

Therefore, since  $\theta, \phi, \psi, \chi$  are all different,

$$\Sigma \cos \frac{1}{2}(\phi - \theta) \cos(\phi + \theta) \sin \frac{1}{2}(\psi - \chi) = 0 \dots \dots \dots (1).$$

Now let

$$\begin{aligned} a &= \cos \theta + i \sin \theta, & b &= \cos \phi + i \sin \phi, \\ c &= \cos \psi + i \sin \psi, & d &= \cos \chi + i \sin \chi; \end{aligned}$$

then

$$\begin{aligned} ab &= \cos(\theta + \phi) + i \sin(\theta + \phi) \dots, \\ a - b &= 2i \sin \frac{1}{2}(\theta - \phi) [\cos \frac{1}{2}(\theta + \phi) + i \sin \frac{1}{2}(\theta + \phi)], \\ a + b &= 2 \cos \frac{1}{2}(\theta - \phi) [\cos \frac{1}{2}(\theta + \phi) + i \sin \frac{1}{2}(\theta + \phi)], \\ \dots & \dots \dots \dots \end{aligned}$$

Again

$$a [b(a + b)(c - d) + c(a + c)(d - b) + d(a + d)(b - c)] = -a(b - c)(c - d)(d - b).$$

Hence, by substitution,

$$\begin{aligned} 4i \Sigma [\cos(\theta + \phi) + i \sin(\theta + \phi)] \cos \frac{1}{2}(\theta - \phi) \sin \frac{1}{2}(\psi - \chi) \\ \quad \times [\cos \frac{1}{2}(\theta + \phi + \psi + \chi) + i \sin \frac{1}{2}(\theta + \phi + \psi + \chi)] \\ = -(2i)^3 \Pi (\cos \theta + i \sin \theta) \sin \frac{1}{2}(\phi - \psi) [\cos \frac{1}{2}(\phi + \psi) + i \sin \frac{1}{2}(\phi + \psi)] \\ = 8i [\cos(\theta + \phi + \psi + \chi) + i \sin(\theta + \phi + \psi + \chi)] \sin \frac{1}{2}(\phi - \psi); \end{aligned}$$

Therefore

$$\begin{aligned} \Sigma [\cos(\theta + \phi) + i \sin(\theta + \phi)] \cos \frac{1}{2}(\theta - \phi) \sin \frac{1}{2}(\psi - \chi) \\ = 2 [\cos \frac{1}{2}(\theta + \phi + \psi + \chi) + i \sin \frac{1}{2}(\theta + \phi + \psi + \chi)] \sin \frac{1}{2}(\phi - \psi). \end{aligned}$$

Equating the real parts

$$\Sigma \cos(\theta + \phi) \cos \frac{1}{2}(\theta - \phi) \sin \frac{1}{2}(\psi - \chi) = 2 \cos \frac{1}{2}(\theta + \phi + \psi + \chi) \Pi \sin \frac{1}{2}(\phi - \psi).$$

Hence (1) may be written

$$2 \cos \frac{1}{2}(\theta + \phi + \psi + \chi) \Pi \sin \frac{1}{2}(\phi - \psi) = 0.$$

Therefore  $\cos \frac{1}{2}(\theta + \phi + \psi + \chi) = 0$ , since  $\Pi \sin \frac{1}{2}(\phi - \psi) \neq 0$ . Hence  $\theta + \phi + \psi + \chi = (2m \pm 1)\pi$ . Therefore  $\theta + \phi + \psi + \chi = n\pi$  (where  $n$  is odd.)

[Note.—Mr. S. NARAYANA AYYAR remarks:—If in the given determinant  $\cos 2\theta, \cos 2\phi, \dots$  take the place of  $\sin 2\theta, \sin 2\phi$ ; then, in a similar way, it can be shown that  $\theta + \phi + \psi + \chi$  is an even multiple of  $\pi$ . From these a geometrical property of a rectangular hyperbola passing through four fixed points can be inferred.]

### QUESTIONS FOR SOLUTION.

10800. (Professor HUDSON, M.A.)—Correction.—In last line of Question: for "greater than  $(\frac{2}{3})^n$ " read "equal to  $\sqrt{\frac{2}{3}}$ ." (See December, 1907, issue of *Educational Times*.)

16346. (T. MUIR, LL.D.)—If the determinant

$$\begin{vmatrix} a & b & c & d \\ b & a & d & c \\ c & d & a & b \\ d & c & b & a \end{vmatrix}$$

vanishes, then  $(ab - cd)(bc - da)(cd - ab)$  is a perfect square, and  $(a^2 - b^2)(a^2 - c^2)(a^2 - d^2) - (a^2 - b^2)(ab - cd)^2 - (a^2 - c^2)(ac - bd)^2 - (a^2 - d^2)(ad - bc)^2$

is the double of the said square. (Cf. Question 16298.)

16347. (T. STUART, M.A., D.Sc.)—Why is it that the factors of

$$N_1 = (x + y)^6 - 45x^4y^2 - 18x^2y^4$$

are always of the form  $M(18) \pm 1$ ? Prove rigidly for all values of  $x$  and  $y$ , the expression

$$N_2 = x^6 + 20x^3y^3 + y^6 - 3xy(x^4 + y^4) - \frac{1}{2}x^2y^2(x^2 + y^2)$$

is always composite, and find the form of the factors.

16348. (R. W. D. CHRISTIE.)—Let  $x^2 - py^2 = 1$ , where  $p$  is of form

$$4m + 3, \text{ then } \left(\frac{x}{z}\right)^2 - p \left(\frac{y}{z}\right)^2 = 1, \text{ } z \text{ being } = \frac{2py - p + 1}{p + 1},$$

ex. gr.,  $x = 8, y = 3, p = 7$ ;

$$\frac{8^2 - 7 \cdot 3^2}{(3^2)^2} = 1, \text{ } z = \frac{9}{2},$$

$$\left(\frac{8}{9/2}\right)^2 - 7 \left(\frac{3}{9/2}\right)^2 = 1.$$

Thus from every integral we obtain a fractional equation. Establish it for any prime whatever.

16349. (Professor F. HERNÁNDEZ.)—Si l'on désigne par  $a$  la chiffre des unités d'un nombre, et par  $s_1$  la somme des valeurs absolues des autres chiffres, et par  $s_2, s_3, \dots, s_n, \dots$  les sommes des valeurs absolues des tranches binaires, ternaires, etc. du nombre formé par ces autres chiffres, les sommes  $a + 4s_1, a + 4s_2, \dots, a + 4s_n, \dots$  seront congrues par rapport au module 6.

16350. (W. J. GREENSTREET, M.A.)—How many different coefficients may be found in the most general (possible) symmetrical homogeneous function of the  $n$ th degree in  $x, y, z$ ?

16351. (Professor SANJANA, M.A.)—Prove the following identity

$$4a^2p^2 - (b^2 + q^2 - c^2 - r^2)^2 + 4b^2q^2 - (c^2 + r^2 - a^2 - p^2)^2 + 4c^2r^2 - (a^2 + p^2 - b^2 - q^2)^2 - [4q^2r^2 - (q^2 + r^2 - a^2)^2] - [4r^2p^2 - (r^2 + p^2 - b^2)^2] - [4p^2q^2 - (p^2 + q^2 - c^2)^2] = 2a^2b^2 + 2b^2c^2 + 2c^2a^2 - a^4 - b^4 - c^4.$$

16352. (Professor NANSON.)—If

$$a/(b-c) + b/(c-a) + c/(a-b) = 0,$$

then

$$a/(b-c)^2 + b/(c-a)^2 + c/(a-b)^2 = 0.$$

16353. (A. M. NESBITT, M.A.)—The co-ordinates of points on a cubic are expressed in terms of a single parameter  $t$  by the equations

$$x/f_1(t) = y/f_2(t) = z/f_3(t),$$

where

$$f_i(t) = a_i t^3 + b_i t^2 + c_i t + d_i.$$

Prove that its inflexions lie on the line

$$\begin{vmatrix} x & y & z \\ a_1 & a_2 & a_3 \\ d_1 & d_2 & d_3 \end{vmatrix} = 3 \begin{vmatrix} x & y & z \\ b_1 & b_2 & b_3 \\ c_1 & c_2 & c_3 \end{vmatrix}.$$

16354. (C. E. YOUNGMAN, M.A.)—Show that the three-cusped epicycloid, referred to the triangle of its cusps, has for equation

$$27C^3(27C - 16L^2) = 64L^4(C^2 - 4a\beta\gamma L),$$

where

$$C \equiv \beta\gamma + \gamma\alpha + \alpha\beta \text{ and } L \equiv \alpha + \beta + \gamma.$$

16355. (R. F. WHITEHEAD, B.A.)—If a set of conics be taken passing through four points, then the quantity

$$[e^4/(1 - e^2)] \sin^2 \frac{1}{2}(\alpha + \beta + \gamma + \delta)$$

is invariant for the set,  $e$  being the eccentricity of, and  $\alpha, \beta, \gamma, \delta$  the eccentric angles of the four points for, any conic of the system. Find its value in terms of the elements of the quadrangle formed by the four points.

16356. (SARADAKANTA GANGULI, M.A.)—An ellipse, the distance between whose foci is constant, slides between two fixed intersecting straight lines inclined at an angle  $\omega$ . Find the envelope of the locus of the foci.

16357. (V. RAMASWAMI AIYAR, M.A. Suggested by Question 16250 of Mr. C. E. YOUNGMAN, M.A.)—In a conic of eccentricity  $e$  the circle on a focal vector SP as diameter cuts the curve again in A, B, C. Prove that the distance of X, the foot of the directrix, from BC, CA, AB, or from the pedal line of S in ABC is equal to SX/e. Also show that, if ABC be any inscribed triangle whose circum-circle passes through S, the pedal line of S in ABC touches the circle whose centre is X and radius SX/e.

16358. (Professor R. W. GENESE, M.A.)—From a variable point P two fixed straight lines  $l_1, l_2$  are projected on to two fixed planes  $\alpha_1, \alpha_2$ . If the projections meet in a point, the locus of P is a hyperboloid of one sheet passing through  $l_1, l_2$  and the intersection of  $\alpha_1, \alpha_2$ .

16359. (Professor NEUBERG.)—Diviser un triangle donné ABC par une droite AD, qui rencontre BC en D, en deux triangles ABD, ACD

tels qu'en tournant autour de AD ils engendrent des volumes qui soient dans un rapport donné  $m : n$ , ou tels que les surfaces engendrées par les lignes brisées ABD, ACD aient un rapport donné  $m : n$ .

16360. (JAMES BLAIKIE, M.A.)—If in an acute angled triangle a point is taken in each side the same distance from its mid-point as the foot of the altitude but in the opposite direction, prove that the perpendiculars drawn to the sides at these points are concurrent, and find the relation between the angles of the triangle in order that the point of concurrence may be within the triangle.

16361. ("SOLIDUS.")—Each vertex of a polygon is joined to the mid-point of the line joining its adjacent vertices. Prove that if all but one of these lines are concurrent, then all must be concurrent.

16362. (I. ARNOLD.)—Divide geometrically a given arc of a given circle into two parts, such that the rectangle under their sines may be equal to a given rectangle.

16363. (R. F. DAVIS, M.A.)—If  $\tan^4 \theta = 1 - \sin \theta$ , prove that either  $\tan \theta = \cos \theta$  or  $\tan^2 \theta = \operatorname{cosec} \theta$ .

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9442. (ARTEMAS MARTIN, LL.D.)—A point is taken at random in the surface of a given triangle; find the average area of the triangle cut off by a line passing through the random point.

9535. (Professor NEUBERG.)—On partage un nombre  $3a$  en trois parties. Quelle est la probabilité que le produit de ces parties soit compris entre  $na^3$  et  $pa^3$ ,  $n$  et  $p$  étant deux nombres donnés moindres que l'unité?

10918. (Professor CATALAN.)—Démontrer que

$$\int_{-1}^{+1} \frac{X_n Z_{n-1} - X_{n-1} Z_n}{Z - x} dz = -\frac{2}{n}.$$

11120. (J. J. WALKER, F.R.S.)—Prove the following construction for the centre of the involutions determined on any transversal cutting the three sides of the triangle ABC in A'B'C', and the three concurrent lines AO, BO, CO in A''B''C'', viz.:—Draw OD parallel to AB and meeting BC in A and the transversal in E; let EF parallel to CA meet AA' in F, and A''G meet FA'' in G; then AG determines the centre.

11244. (A. J. PRESSLAND, M.A.)—Prove that the median and the pedal triangles of any triangle have a common escribed parabola, whose focus is on the minimum ellipse of the median triangle.

11310. (J. GRIFFITHS, M.A.)—Show, by using isogonal co-ordinates  $x, y, z$ , that the Brocard circle  $bcr + cay + abz = a^2 + b^2 + c^2$  passes through four of the G-points of the nine-point circle, viz.  $x = 2 \cos A, y = a/c, z = a/b, \dots$ . Also that the orthocentroidal circle  $x \cos A + y \cos B + z \cos C = \frac{3}{2}$  passes through the four inverse G-points, viz.,  $x = \frac{1}{2} \sec A, y = c/a, z = b/a, \dots$ . [See p. 26 of the Proposer's *Notes on the Recent Geometry of the Triangle*.]

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, December 13th, 1907.—Prof. W. Burnside, President, in the Chair.

Messrs. G. N. Watson, D. G. Taylor, F. B. Pidduck, L. R. Line, W. E. Dalby were elected members.

Messrs. S. T. Shovelton and G. N. Watson were admitted into the Society.

The following papers were communicated:—

"A Formula in Finite Differences and its Application to Mechanical Quadrature," Mr. S. T. Shovelton.

"Weierstrass' E-Function in the Calculus of Variations," Prof. A. E. H. Love.

## THE NINE POINT CIRCLE.

With Notes on (1) Simson's Line, (2) The Radical Axis, (3) The Quadrilateral.

Contributed to the "Educational Times," "Mathematical Gazette," "Nouvelles Annales," "Mathesis," and "American Monthly."

By WILLIAM GALLATLY, M.A.

ELIJAH JOHNSON, 30 TRINITY STREET, CAMBRIDGE.

PRICE ONE SHILLING.

## CAREY'S "GRADUS AD PARNASSUM."

WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, STATIONERS' HALL, LONDON.

# MESSRS. BELL'S NEW BOOKS

## MASON'S NEW ENGLISH GRAMMARS.

Revised in accordance with Modern Requirements by

**A. J. ASHTON, M.A.**

Senior English Master, Kelvinside Academy, Glasgow; and Examiner in English to the College of Preceptors.

Now ready. Crown 8vo. 125 pages. 1s.

### MASON'S JUNIOR ENGLISH GRAMMAR.

This new and revised edition of MASON'S ENGLISH GRAMMARS has been augmented and revised so as to embody the results of the advances that have been made in the teaching of English Grammar since these grammars were last revised by Mr. Mason. The new edition will consist of three courses—Junior, Intermediate, and Senior—and will be printed in good bold type and strongly bound in cloth. The Intermediate and Senior volumes are in active preparation.

Just Published. 1s. 6d.

**A JUNIOR HISTORY OF ENGLAND.** By E. NIXON, late Head Mistress of Junior School, Specialist in History, Ladies' College, Cheltenham. With numerous illustrations.

This History, which is intended to be a preparation for the study of much fuller books, aims at giving an idea of the development of the constitution and growth of the Empire, while telling of those who have lived, fought, and died for king and country. The illustrations have been limited to such as are contemporary, or in some measure authentic, and therefore have educational value.

Crown 4to, 6s. net.

**AN ATLAS OF EUROPEAN HISTORY.** By EARLE W. DOW, Junior Professor of History in the University of Michigan.

This work contains 32 double-page coloured maps and 18 smaller maps, plans, &c., in black and white. The maps cover the field of European History from the Ancient Eastern Empires to the Decline of Europe in the Americas and Contemporary Europe. It meets the need of a handy historical atlas in the English Language suitable for use in Schools and Colleges. The Full Index adds to its value.

Ready immediately. Crown 8vo, 1s. 6d.

**A THIRD YEAR'S COURSE IN PRACTICAL PHYSICS.** By JAMES SINCLAIR, M.A. (Glas.), B.Sc. (Lond.), Head Science Master in Shawlands Academy, Glasgow. With numerous Diagrams.

This volume, which deals with Light, continues the work of the "First and Second Year's Courses," already published, and which have been widely adopted.

Now completed. Crown 8vo, 2s. 6d.

**A FIRST YEAR'S COURSE IN GEOMETRY AND PHYSICS.** By ERNEST YOUNG, B.Sc., Head Master, Lower School of John Lyon, Harrow. Parts I. and II. are also issued separately, price 1s. 6d. Part III., 1s. Answers separately, 6d. net.

Part I. furnishes a combined course in Geometry and Physics. Part II. contains the second and third terms' work in Geometry. Part III. contains the second and third terms' work in Physics.

"The course of instruction in this book has been prepared with great care and on sound lines. The geometry is modern and the physics is practical. The book is from every point of view a suitable one for use in schools."—*Schoolmaster.*

## BELL'S ENGLISH TEXTS for SECONDARY SCHOOLS.

GENERAL EDITOR: **A. GUTHKELCH, M.A.**

Senior English Master, Bancroft's School; Lecturer in English (Evening Classes), King's College, London.

### FIRST YEAR.

**LAMB: TALES FROM SHAKESPEARE.** Selected by R. S. BATE, M.A. 10d.

**KINGSLEY: THE HEROES.** Edited by L. H. POND, B.A. With Two Maps. 1s.

**HAWTHORNE: SELECTIONS FROM THE WONDER BOOK AND TANGLEWOOD TALES.** Edited by H. HAMPSHIRE, M.A. 1s.

### THIRD YEAR.

**COLERIDGE: THE ANCIENT MARINER;** and selected old **ENGLISH BALLADS.** Edited by A. GUTHKELCH, M.A. 1s.

### SECOND YEAR.

**STORIES OF KING ARTHUR, FROM MALORY AND TENNYSON.** Edited by R. S. BATE, M.A. 1s.

**CHARLES READE: THE CLOISTER AND THE HEARTH.** Abridged and Edited by the Rev. A. E. HALL, B.A. [*Immediately.*]

**SCOTT: A LEGEND OF MONTROSE.** Abridged and Edited by F. C. LUCKHURST. [*Immediately.*]

### FOURTH YEAR.

**CHARLES LAMB: SELECTED ESSAYS AND LETTERS.** Edited by A. GUTHKELCH, M.A. With a Map of London in the time of Lamb. 1s. 4d.

## COLLEGE OF PRECEPTORS' CERTIFICATE EXAMS, 1908.

MESSRS. BELL'S EDITIONS OF BOOKS SET.

**SHAKESPEARE: MERCHANT OF VENICE.** Edited, with Introduction and Notes, by T. DUFF BARNETT, B.A. 2s. (*Bell's English Classics.*)

**Notes,** separately. 1s.  
**Text,** with Introduction and Glossary, by JOHN DENNIS. Illustrated. 1s. net. (*Chiswick Shakespeare.*)

**SHAKESPEARE: JULIUS CÆSAR.** Edited, with Introduction and Notes, by T. DUFF BARNETT, B.A. 2s.

**Notes,** separately. 1s.  
**Text,** with Introduction and Glossary, by JOHN DENNIS. Illustrated. 1s. net. (*Chiswick Shakespeare.*)

**EUTROPIUS.** Books I. and II. Edited, with Introduction, Notes, and Vocabulary, by J. G. SPENCER, B.A. With numerous Illustrations and Map. 1s. 6d. (*Bell's Illustrated Classics.*)

**Translation.** 5s. (*Bohn's Classical Library.*)

**CÆSAR: DE BELLO GALLICO.** Books I. and II. Edited, with Introduction, Notes, Exercises, and Vocabulary, by A. C. LIDDELL, M.A. With numerous Illustrations, Maps, and Plans. 1s. 6d. each. (*Bell's Illustrated Classics.*)

**Translation.** 1s. (*Bell's Classical Translations.*)

**VIRGIL: ÆNEID.** Book I. Edited, with Introduction, Notes, and Vocabulary, by the Rev. E. H. SWEET-ESCOTT, M.A., Assistant Master at Dulwich College. 1s. 6d. (*Bell's Illustrated Classics.*)

**Translation.** 1s. (*Bell's Classical Translations.*)

**VIRGIL: ÆNEID.** Book X. Edited with Introduction, Notes, and Vocabulary, by L. D. WAINWRIGHT. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics.*)

**Translation.** 1s. (*Bell's Classical Translations.*)

**HORACE: ODES.** Book III. Edited, with Introduction, Notes, and Vocabulary, by H. LATTER, M.A. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics.*)

**Translation.** 1s. (*Bell's Classical Translations.*)

**EURIPIDES: HECUBA.** Edited by the Rev. A. W. UPCOTT, M.A. With Introduction, Notes, Appendices, and Vocabulary, and numerous Illustrations. 2s. (*Bell's Illustrated Classics.*)

**Translation.** 1s. (*Bell's Classical Translations.*)

**XENOPHON: ANABASIS.** Book I. Edited, with Introduction, Notes, and Vocabulary, by E. C. MARCHANT, M.A. With Illustrations and Map. 1s. 6d. (*Bell's Illustrated Classics.*)

**Translation.** 1s. (*Bell's Classical Translations.*)

London: GEORGE BELL & SONS, York House, Portugal Street, W.C.

# FOR THE CAMBRIDGE LOCALS.

**Syllabus Requisites for Geometrical Drawing. Every Instrument is of English make and thoroughly reliable.**

## THE "CAMBRIDGE" BOXES OF INSTRUMENTS.

Containing every article required for Candidates entering for the above Locals as stipulated in the Schedules for Geometry.

**No. 10a.** A Strong Sliding Cloth-covered Box, containing—

- 1 Patent Brass Bow Pencil Compass, with Point Protector, to take any size of Pencil up to full size
- 1 Black Lead Pencil ("H") and 1 Compass Pencil.
- 1 Six-inch Boxwood Rule and Protractor combined, graduated in inches, tenths of an inch, centimetres, and millimetres.
- 1 Nickel Set Square (unbreakable), 45°. 1 Nickel Set Square (unbreakable), 60°.

Price 1s. 9d. per Box. { Price for orders of 6 dozen, 1s. 7½d. per Box.  
 " " " 12 " " 1s. 6d. "

**No. 11a.** Contains the same instruments as No. 10a, but in a Strong Polished Wood Box, with divisions.

Price 2s. 3d. per Box. { Price for orders of 6 dozen, 2s. 1½d. per Box.  
 " " " 12 " " 2s. "

Attention is also drawn to—

## "THE PREPARATORY SCHOOL" BOX OF INSTRUMENTS.

**No. 9a.** A Strong Sliding Cloth-covered Box, containing—

- 1 Patent Brass Pencil Compass, to take any size of Pencil up to full size.
- 1 Divider Point. 1 Brass Semi-circular Protractor.
- 1 Black Lead Pencil ("H"). 1 Compass Pencil.
- 1 Wooden Set Square, 45°. 1 Wooden Set Square, 60°.
- 1 Six-inch Boxwood Rule, graduated in inches, tenths of an inch, centimetres, and millimetres.

Price 1s. 4d. per Box. { Price for orders of 6 dozen, 1s. 3d. per Box.  
 " " " 12 " " 1s. 2d. "

Any article contained in these boxes can be had separately. Prices on application.

Boxes of Instruments of similar character prepared to meet different requirements kept in Stock. Apply for Illustrated Circular.

## SCIENCE NOTE BOOKS & PAPERS.

*The MOST COMPLETE and ACCURATE Series issued, of which the following is a selection.*

### GRAPHICAL NOTE BOOKS.

No.	Per	Gross.
	PUB.	NET.
	s. d.	s. d.
431	40 pages, size 9½ in. by 7½ in., ruled one inch, half-inch, and one-tenth-inch squares, stout printed cover	24 0 18 0
433	32 pages, size 8 in. by 6½ in., ruled one inch, half-inch, and one-tenth-inch squares, stout printed cover	12 0 9 0

### PHYSICS NOTE BOOKS.

The following books are printed from machine-engraved plates, consequently the ruling is accurate.

435	128 pages, size 8 in. by 6½ in., ruled alternately, right hand pages centimetre, half-centimetre, and millimetre squares, left hand pages exercise and margin, stiff cover, cloth back, round corners	72 0 54 0
437	128 pages, size 8 in. by 6½ in., ruled alternately, right hand pages one inch, half-inch, and one-tenth-inch squares, left hand pages exercise and margin, stiff cover, cloth back, round corners	72 0 54 0
441	48 pages, size 9½ in. by 7½ in., ruled alternately, right hand pages centimetre, half-centimetre, and millimetre squares, left hand pages exercise and margin, Nonpareil covers, round corners, and label for Pupil's name	36 0 27 0
442	48 pages, size 9½ in. by 7½ in., ruled alternately, right hand pages one inch, half-inch, and one-tenth-inch squares, left hand pages exercise and margin, Nonpareil cover, round corners, and label for Pupil's name	36 0 27 0

A Complete List of Science Books and Papers with Specimen Rulings will be sent free on application.

THE EDUCATIONAL SUPPLY ASSOCIATION would call attention to

# THE STANTON DESK.

as supplied for the use of

H.R.H. PRINCE EDWARD OF YORK and H.R.H. PRINCE ALBERT OF YORK,  
both at Marlborough House and Sandringham.

This Desk has many special features:—

1. It is made entirely of wood.
2. The Desk is fitted with chair seat.
3. The centre back rail is curved inwards and the upper back rail is curved outwards, so that the maximum of support is given to both the hollow of the back and the shoulders.
4. The Desk Locker is made to slide backwards and forwards, allowing the edge of the Desk to be vertically over the edge of the seat when the Pupil is writing, or leaving sufficient space for the Pupil to stand comfortably.

Strongly made, with dovetailed corners.

Length of top, 22 in.; width, 18½ in.; seat, 15 in.; height, 32 in., 30 in., and 28 in.; floor space, 31 in. to 35 in.

PITCH PINE, STAINED AND VARNISHED.

Price each, net, £1. 1s. 6d.

N.B.—This Desk can be supplied fitted with a sliding pad for the back (all other particulars as No. 143), and the price would then be

Price each, net, £1. 4s. 6d.

THESE DESKS PREVENT SCHOLARS  
ASSUMING ANY HARMFUL ATTITUDE.

The New School Furniture Catalogue, just published by the Educational Supply Association, contains particulars of above Desks, with those of many other Patterns of Desks, Apparatus, &c. and will be forwarded, post free, on application.

THE "STANTON" DESK. No. 143.

THE EDUCATIONAL SUPPLY ASSOCIATION supplies

## EVERY SCHOOL REQUISITE,

and would draw attention to its Catalogues as follows, any of which will be forwarded post free on application :

- CATALOGUE OF SCHOOL FURNITURE ;
- CATALOGUE OF SCHOOL STATIONERY AND REQUISITES ;
- CATALOGUE OF REWARD BOOKS AND PRIZES ;
- CATALOGUE OF KINDERGARTEN OCCUPATIONS ;
- CATALOGUE OF CHEMICAL APPARATUS, CHEMICALS, AND REAGENTS ;
- CATALOGUE OF THE HOLBORN SERIES OF PUBLICATIONS, &c., &c., &c. ;

any or all of which will be sent post free on application to the

# THE EDUCATIONAL TIMES,

AND

Journal of the College of Preceptors.

Vol. LXI.] New Series, No. 562.

FEBRUARY 1, 1908.

{Published Monthly, price, to Non-Members, 6d.; by Post, 7d. Annual Subscription, 7s.

## COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

### MEMBERS' MEETING.

The next Monthly Meeting of the Members will take place on Wednesday, the 19th of February, at 7.30 p.m., when F. CHARLES, Esq., B.A., will read a Paper on "Suggestions to English Educationists from America." A Discussion will follow the reading of the Paper. Members have the privilege of introducing their friends.

### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 31st of August, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in February.

**Certificate Examinations.**—The Midsummer Examination for Certificates will commence on the 30th of June, 1908.

**Lower Forms Examinations.**—The Midsummer Examination will commence on the 30th of June, 1908.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Spring Examination in 1908 will commence on the 3rd of March.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

### LECTURES FOR TEACHERS.

A.—The First Course of Lectures (Thirty-sixth Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on "The Application of Psychology to the Work of the School," will commence on Thursday, February 13th, at 7 p.m.

The Course is meant to meet the needs of Teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the classroom. The Fee for the Course is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

For syllabus, see page 47.

C. R. HODGSON, B.A., Secretary.

Bloomsbury Square, W.C.

## Diploma Correspondence College, Ltd.

Principal—J. W. KNIPE, L.C.P., F.R.S.L.

Vice-Principal—S. H. HOOKE, B.A. Hons. Lond.

Specially arranged Courses for

LONDON MATRICULATION,  
B.A., B.D., B.Sc.,

on application to the

SECRETARY, Dep. Corr. Coll., Ltd.,

WOLSEY HALL, OXFORD.

## UNIVERSITY OF ST. ANDREWS.

### L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

## LONDON COLLEGE OF MUSIC.

(Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: HIS GRACE THE DUKE OF LINDSAY.  
Dr. F. J. KARN, Mus. Bac. Cantab., Principal.  
G. AUGUSTUS HOLMES, Esq., Director of Examinations.  
EXAMINATIONS, 1908.

The NEXT EXAMINATION in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 400 Provincial Centres in APRIL, when Certificates will be granted to all successful candidates.

The Higher Examinations (Practical and Theoretical) for Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma, L.C.M., and Fellowship (F.L.C.M.) take place in JUNE, JULY, and DECEMBER.

Gold and Silver Medals and Book Prizes are offered for competition according to the Regulations.

LOCAL SCHOOL CENTRES.—Full particulars with reference to the formation of these Centres will be forwarded to Principals of Schools upon application.

SYLLABUS for 1908, together with Annual Report, is now ready, and may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best Professors at moderate fees. The College is open 10 a.m. to 9.30 p.m.

A COURSE of TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WEEKES HOLMES, Secretary.

## THE ASSOCIATED BOARD OF THE R.A.M. AND R.C.M.

FOR LOCAL EXAMINATIONS IN MUSIC.

PATRON: HIS MAJESTY THE KING.

PRESIDENT: H.R.H. THE PRINCE OF WALES, K.G.

**LOCAL CENTRE EXAMINATIONS (Syllabus A).** Examinations in Theory at all Centres in March and November; in Practical Subjects at all Centres in March-April, and in the London District and certain Provincial Centres in November-December also. Entries for the March-April Examinations close Wednesday, February 5th, 1908 (or, with extra fee, February 13th).

**SCHOOL EXAMINATIONS (Syllabus B).** Held three times a year, viz., March-April, June-July, and October-November. Entries for the March-April Examinations close Wednesday, January 29th, 1908 (or, with extra fee, February 6th).

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 3d. per set, per year, post free.

Syllabuses A and B, entry forms, and any further information, will be sent post free on application to—

JAMES MUIR, Secretary.

## SUCCESSES

HAVE BEEN GAINED BY

University  
Correspondence College  
Students.

Full Prospectus post free from THE SECRETARY, Burlington House, Cambridge, or from the London Office of University Correspondence College, 32 Red Lion Square, Holborn, W.C.

## UNIVERSITY COLLEGE, BRISTOL.

FAULTY OF ARTS AND SCIENCE.  
Faculty of Medicine.

Department of Engineering.  
Department of Public Health.  
Dental Department.  
Secondary Training Department.  
Day Training Colleges for Teachers (Men and Women).

Sessional Courses are organized for the Examinations in Arts, Science, Medicine, and Divinity of the University of London. Also for the Cambridge Higher Local Examinations.

Complete Three Years' Courses for Civil, Mining, Mechanical, and Electrical Engineering, and Courses for Students intending to become Architects and Surveyors.

Special Day and Evening Courses in all Departments are given by the Professors and Lecturers.

The work of the Women Students is under the supervision of a Lady Tutor.

All Courses are open to MEN and WOMEN Students. For full information see Prospectus, which will be forwarded free on application.

JAMES RAFTER,  
Registrar and Secretary.

## DENMARK HILL GYMNASIUM AND PHYSICAL TRAINING COLLEGE FOR TEACHERS.

Full preparation for Public Examinations.  
British College of Physical Education: English and Swedish systems.

Board of Education: Science,  
Swimming and Sports.

For particulars apply—Miss E. SPELMAN STANGER,  
Trevens, Sunray Avenue, Denmark Hill, London. S.E.

## ST. MARY'S COLLEGE, PADDINGTON, W.

TRAINING COLLEGE  
(attached to High School and Kindergarten).

Recognized by the Board of Education as a Training College for Secondary Teachers.  
In connexion with London University.

Principal—

Miss J. L. LATHAM, M.A. Dublin,  
Girton College, Cambridge, Mathematical Tripos,  
Oxford University Diploma in Teaching,

assisted by

Miss M. H. WOOD, M.A. (Lond.), D.Litt. Dublin,  
Girton College, Cambridge, Classical Tripos, Cam-  
bridge University Diploma in Teaching.

Students Prepared for the London or Cambridge  
Teacher's Diploma.

Practice in Secondary and Primary Schools.  
All London advantages. Hostel for Students at  
32 Warrington Crescent, W.

Fees Sixty Guineas per annum.  
Apply—PRINCIPAL.

## BIRKBECK COLLEGE, BREMS BUILDINGS, CHANCERY LANE, E.C.

Principal—G. ARMITAGE-SMITH, D.Lit., M.A.

SECOND TERM commenced Monday, 13th January.

DAY AND EVENING CLASSES.

UNIVERSITY OF LONDON.—The College provides  
Courses of Instruction in subjects in the Faculties  
of ARTS, SCIENCE, LAWS, and ECONOMICS,  
under Recognised Teachers of the Uni-  
versity.

Well appointed Laboratories. Facilities for Research.  
Twenty Studentships open to free competition.

Particulars on application to the SECRETARY.

## TRAINING COLLEGE FOR TEACHERS OF THE DEAF,

EATON RISE, EALING, LONDON, W.

The Training College affords a professional training as  
Teachers of the Deaf upon the Pure Oral System to  
young women, who are received as Resident or Non-  
resident Students. The Training College is recognized  
by the Board of Education for a Third Year Students'  
Course, and has a Practising School attached to it.  
Apply to the PRINCIPAL.

## UNIVERSITÉ DE RENNES (France). FRENCH COURSE FOR FOREIGNERS OF BOTH SEXES.

WINTER TERM: From 15 Nov. 1907 to 15 Feb. 1908.  
SUMMER TERM: From 1 March to 8 June, 1908.

DIPLOMAS.

Diplômes de Langue et Littérature Françaises; Doctorat.  
Reduction of 50% on railway fares from Dieppe or  
Calais to Rennes. Apply for Prospectus to  
Prof. FEUILLETAT, Faculté des Lettres, Rennes.

## BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON).

YORK PLACE, BAKER STREET, LONDON, W.

Principal—Miss M. J. TUCKE, M.A.

The Half-term begins on Thursday, February 20th.  
Lectures are given in preparation for all Examinations  
of the University of London in Arts, Science, and Pre-  
liminary Medicine, for the Teachers' Diploma (London)  
and for the Teachers' Certificate (Cambridge) and for the  
Cambridge Higher Local Examination. Entrance  
Scholarships.

Special Course of Scientific Instruction in Hygiene,  
recognised by the Sanitary Inspectors' Examination  
Board.

Six Laboratories are open to Students for Practical  
Work.

A single Course in any subject may be attended.  
Regular Physical Instruction is given, free of cost, to  
Students who desire it, by a fully qualified Woman  
Teacher.

Students can reside in the College.  
Full particulars on application to the PRINCIPAL.

## DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department—Miss MARY MORTON, M.A.

Students are admitted to the Training Course in  
October and January. Entrance Scholarships. Appli-  
cations should be sent to the HEAD OF THE DEPART-  
MENT.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss H. L. POWELL,

late Scholar of Newnham College (Hist. Tripos,  
Class I.), late Head Mistress of the Leeds Girls'  
High School.

A residential College providing a year's professional  
training for Secondary Teachers.

The course includes preparation for the Cambridge  
Teacher's Certificate (Theory and Practice), and for the  
Teachers' Diploma of the London University. Ample  
opportunity is given for practice in teaching science,  
languages, mathematics, and other subjects in various  
schools in Cambridge.

Students are admitted in January and in September.  
Full particulars as to qualifications for admission,  
scholarships, and bursaries may be obtained on applica-  
tion to the PRINCIPAL, Cambridge Training College,  
Wollaston Road, Cambridge.

**PROFESSIONAL PRELIMINARY EXAMINATIONS, LONDON MATRIC., INTER, and FINAL B.A. and B.Sc.**—Private and Class Tuition or the above, and in Science and Advanced Mathematics, by ALEXANDER W. BAIN, B.A., B.Sc. (Lond.), A.I.C., F.C.S., Anglo-Saxon and Early English Text Society's Prizeman (Univ. Coll., Lond.), Silver Medal and Exhibition in Chemistry and Prizeman in Organic Chemistry (Univ. Coll., Lond.), Honours in Chemistry at B.Sc. and at Board of Education Exams. Nearly 2,000 successes in 16 years.

Mr. BAIN is the Head of the Chemical Department, Tottenham Polytechnic, also a Sub-Examiner to the University of London and to the College of Preceptors. He has prepared the sons of leading public and professional men for the Universities and Professional Entrance Examinations.

Address—Mr. A. W. BAIN, B.A., B.Sc., A.I.C., Central Tutorial Classes, 207 Gray's Inn Road, London.

**CORRESPONDENCE TUITION,**

Classes or Private Lessons in all Subjects for all Examinations, &c., at moderate fees. Special tuition for MEDICAL Prelims. and DIPLOMA Exams. Many recent successes.—F. J. BORLAND, B.A., L.C.P. (Science and Math. Prizeman), Victoria Tutorial College, 87 Buckingham Palace Road, S.W.; and Stallheim, Brunswick Road, Sutton, Surrey. Schools visited and Examinations conducted.

**Messrs. TRUMAN & KNIGHTLEY,**

Educational Agents,

6 HOLLES ST., CAVENDISH SQUARE, LONDON, W.

Telegrams—"TUTORESS, LONDON."  
Telephone—No. 1167 Mayfair.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

**A.—EMPLOYMENT DEPARTMENT.**

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Prospectus, References, and full particulars will be forwarded on application.

## THE MIDDLESEX HOSPITAL MEDICAL SCHOOL.

A SCHOOL OF THE UNIVERSITY OF LONDON.

The Medical School of the Middlesex Hospital has been largely rebuilt and equipped to meet the most recent educational requirements.

### HOSPITAL APPOINTMENTS.

In addition to Clerkships and Dresserships, Sixteen Resident Appointments are annually open to all General Students. Also Medical, Surgical, and Obstetric Registrars are appointed annually.

### SCHOLARSHIPS AND PRIZES.

Scholarships and Prizes to the value of £860 are awarded annually.

Full particulars may be obtained on application to

Mr. J. MURRAY, M.B., F.R.C.S.,  
Dean of the Medical School,  
Middlesex Hospital, London, W.

## CHARING CROSS HOSPITAL MEDICAL COLLEGE. (UNIVERSITY OF LONDON.)

The SUMMER SESSION, 1908, will be opened on Tuesday, April 28th.

The College is complete in all Departments.

### SPECIAL TEACHERS

for all Preliminary and Intermediate Subjects.

### EIGHT ENTRANCE SCHOLARSHIPS

are awarded annually of the aggregate value of £575.

Twenty-two Hospital and Teaching APPOINTMENTS are made yearly.

For Prospectus and details of fees apply to—

FREDERICK C. WALLIS, Dean.

## THE ROYAL DENTAL HOSPITAL OF LONDON AND LONDON SCHOOL OF DENTAL SURGERY, LEICESTER SQUARE, LONDON, W.C.

The SUMMER SESSION, 1908, will commence on Friday, May 1st.

The Royal Dental Hospital was founded in 1858 at Soho Square, and in March, 1874, was removed to Leicester Square. The increased demands made on it by the public and the rapid growth of the Medical School necessitated the erection of an entirely new building. The new Hospital was opened in March, 1901, and is complete in every detail with modern appliances, and the School portion of the building thoroughly equipped for teaching purposes. The clinic of the Hospital is unrivalled. In 1906 99,760 operations were performed.

The following SCHOLARSHIPS and PRIZES are open for competition:—

The ENTRANCE SCHOLARSHIP, of the value of £20, awarded in October.

The SAUNDERS SCHOLARSHIP, of the value of £20.

The STORER-BENNETT RESEARCH SCHOLARSHIP, of the value of £50.

The ALFRED WOODHOUSE SCHOLARSHIP, of £35.

The ROBERT WOODHOUSE PRIZE, of the value of £10.

### INSTRUCTION IN MECHANICAL DENTISTRY.

The instruction in Mechanical Dentistry as required for the Dental Curriculum can be obtained at this Hospital.

Further particulars concerning Fees, Scholarships, &c., can be obtained on application to

THE DEAN.

## GUY'S HOSPITAL MEDICAL SCHOOL. (UNIVERSITY OF LONDON.)

The SUMMER SESSION will begin on May 1st, 1908.

(Students who have recently passed the College of Preceptors' Examination are advised to enter forthwith to prepare for the Conjoint Examinations in July next.) The Hospital contains 608 Beds, which are in constant occupation.

**ENTRANCE SCHOLARSHIPS.**—Five Scholarships will be competed for in September, 1908. Two in Arts of the value of £100 and £50, and three in Science of the value of £150, £60, and £50. Students who enter in May, if otherwise eligible, are able to compete.

**APPOINTMENTS.**—Hospital appointments are made strictly in accordance with the merits of the Candidates, and without extra payment.

**DENTAL SCHOOL.**—A recognized Dental School is attached to the Hospital, which affords to Students all the instruction required for a Licence in Dental Surgery.

**PRIZES AND SCHOLARSHIPS** are awarded to Students in their various years, amounting in the aggregate to more than £660.

**RESIDENTIAL COLLEGE.**—The Residential College accommodates about 50 Students in addition to the Resident Staff of the Hospital. It contains a large Dining Hall, Reading Room, Library, and Gymnasium for the use of the Students' Club.

For Prospectus, particulars of the Scholarships, and further information, apply to the Dean, Dr. H. L. EASON, Guy's Hospital, London Bridge, S.E.

## WESTMINSTER HOSPITAL MEDICAL SCHOOL (UNIVERSITY OF LONDON.)

BROAD SANCTUARY AND CAXTON STREET, S.W.

The SUMMER SESSION will begin on April 23rd.

**SCHOLARSHIPS IN ARTS AND SCIENCE**, to the value of £260, will be offered for competition among Students entering then. The Examination takes place on April 13th and 14th.

The Hospital and School are close to Victoria, Charing Cross, and three Metropolitan District Railway stations.

For Prospectus and further particulars apply to the DEAN.

## ST. MARY'S HOSPITAL MEDICAL SCHOOL, PADDINGTON, W. (UNIVERSITY OF LONDON.)

The SUMMER SESSION will begin on April 28th.

The Medical School provides Courses of Instruction covering the ENTIRE MEDICAL CURRICULUM for the Degrees of the Universities and for the Diplomas of M.R.C.S., L.R.C.P. All Courses are recognized by the University of London for Internal Students.

**SIX ENTRANCE SCHOLARSHIPS**, value £145 to £52, 10s., competed for in September next. Candidates joining the School in January or April next are eligible.

Complete Handbook on application to the DEAN.

## ROYAL COLLEGE OF PHYSICIANS OF EDINBURGH, ROYAL COLLEGE OF SURGEONS OF EDINBURGH, AND FACULTY OF PHYSICIANS AND SURGEONS OF GLASGOW.

Copies of Regulations for the Triple Qualification of this Board (L.R.C.P.E., L.R.C.S.E., and L.F.P. & S.G.), containing dates of Professional Examinations for year 1908, Curriculum, &c., may be had on application to JAMES ROBERTSON, Solicitor, 54 George Square, Edinburgh, Inspector and Treasurer for Edinburgh; or from ALEXANDER DUNCAN, B.A., LL.D., Faculty Hall, 242 St. Vincent Street, Glasgow, Inspector and Treasurer for Glasgow. In applying for copies, please state the date of commencement of medical study.

### JUST PUBLISHED.

### INVALUABLE TO SCHOOLS.—

Schoolmasters should use the BLACK AUTOCOPYIST—most perfect, simplest, and cleanly Copyist invented—for reproducing Examination Papers, Diagrams, Circulars, Music, &c. Original written or drawn on ordinary paper. Write for Price List and Specimens, or call and see apparatus in operation.—AUTOCOPYIST Co., No. 3 Dept., 64 Queen Victoria Street, London, E.C.

## Nervous Disorders

The nerves need a constant supply of phosphates to keep them steady and strong. A deficiency of the phosphates causes a lowering of nervous tone, indicated by exhaustion, restlessness, headache or insomnia.

## Horsford's Acid Phosphate

(Non-Alcoholic.)

furnishes the phosphates in a pure and abundant form. It repairs waste; restores strength and induces restful sleep without the use of dangerous drugs.

An Ideal Tonic in Nervous Diseases.

If your chemist does not have it in stock he can obtain it from Bovril, Ltd., 152 Old Street, London, E. C.

# UNIVERSITY OF EDINBURGH.

**Chancellor:** The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

**Rector:** The Right Hon. R. B. HALDANE, K.C., M.P., LL.D., &c.

**Principal and Vice-Chancellor:** Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.

**Secretary of Senatus:** Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Winter Session** begins about the middle of October, and closes about the end of March; the **Summer Session** extends from the beginning of May to the end of July.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery**, and **Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Arts Degrees**, the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c.; and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. Education in Military subjects is given in connexion with the Scheme of allotment of Army Commissions to Graduates of the University. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering**, and in **Public Health**, and the Degree of B.Sc. in **Agriculture** and in **Forestry**. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and in Hebrew, Arabic, and Syriac. The Degree of Bachelor of Divinity (B.D.) is conferred. The **Law Faculty**, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and History, Roman Law, and Political Economy, and Lectureships in International Private Law and Administrative Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.), and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and a University **Certificate in Tropical Diseases** is also conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 41 Professors, 49 Lecturers, and over 50 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £18,500. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, Law, and Music, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 4d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers: Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each.

August, 1907.

By authority of the Senatus,

L. J. GRANT, *Secretary of Senatus.*

## EDUCATIONAL AGENCY.

(ESTABLISHED OVER 70 YEARS.)

*Proprietors:—*

Messrs. GRIFFITHS, SMITH, POWELL & SMITH.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools' Association.)  
**Address—74 GOWER STREET, LONDON, W.C.**

*Registrar—*Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Hours for interviews (preferably by appointment):—

11 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

## THE JOINT SCHOLASTIC AGENCY.

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies:—

**HEAD MASTERS' CONFERENCE.**

**INCORPORATED ASSOCIATION OF HEAD MASTERS.**

**COLLEGE OF PRECEPTORS. TEACHERS' GUILD.**

**INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.**

**ASSOCIATION OF TECHNICAL INSTITUTIONS.**

**ASSOCIATION OF PREPARATORY SCHOOLS.**

**WELSH COUNTY SCHOOLS.**

*Registrar:—*Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments.

The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION.

Interviews (preferably by appointment) 12 p.m.—1.30 p.m., and 3 p.m.—5.30 p.m. Saturdays, 12 p.m.—1 p.m.

## COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, W.C.

## Lectures for Teachers

ON THE

## SCIENCE, ART, AND HISTORY OF EDUCATION.

THE APPLICATION OF PSYCHOLOGY TO THE  
WORK OF THE SCHOOL.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The First Course of Lectures (Thirty-sixth Annual Series) will commence on Thursday, February 13th, at 7 p.m.

The Course is meant to meet the needs of teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connection with the examinations for the Associateship, the Licentiate, and the Fellowship. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the classroom.

## SYLLABUS.

I. (Feb. 13.) *Nature and scope of Psychology*: border-land between physiology and psychology; characteristics of consciousness: the psychological attitude of mind: the teacher's use of psychology: Professor Münsterberg's view: the intermediary between psychology and education: genetic psychology: experimental methods: child study.

II. (Feb. 20.) *Consciousness*: its fundamental character: its polarity: its insulation: "the general consciousness": the ego or self: the subjective and objective: the unity of individual consciousness: meaning of the subconscious: advantageous position of educator as external influence.

III. (Feb. 27.) *Manipulation of Consciousness*: the various modes of being conscious: the so-called faculties: concentration and diffusion of consciousness: interest and attention: interaction between them: interest as means and as end: relation between the interesting and the easy: kinds of attention: physiological mechanism of attention.

IV. (March 5.) *Sense-perception*: nature of pure sensation: the senses, general and special: the essential mark of perception: the respective contributions of sensation and perception to knowledge: nature and scope of observation: its relation to inference: the gaping point: danger underlying the phrase "the training of the senses."

V. (March 12.) *Mental content*: the unit of mental content: the idea: laws of the interaction and combination of ideas: apperception: presented content and presentative activity: gradual modification of presentative activity: transitive and intransitive elements of thought: the static and dynamic view of the concept: the logical and psychological aspect of the concept.

VI. (March 19.) *Habit*: habit based on the laws of association: these laws not limited to ideas: association a general principle of organic development: place and value of habits in education: accommodation and co-ordination: the elimination of consciousness: convergent and divergent association: the continuum: redintegration.

VII. (March 26.) *Retention and recall*: physiological basis of memory: plasticity: memory not limited to intellectual process: personal identity: question of the possibility of improving the quality of memory: educational applications of mnemonics: learning by rote: obliviscence: element of purpose in memory.

VIII. (April 23.) *Imagination*: place of imagery in thinking: limitations imposed by images: importance of clearly imaged ends in ordinary life: practical applications in the schoolroom: the aesthetic imagination: cause of general suspicion of the "busy faculty": scientific uses of the imagination: exact meaning of "picturing out": relation of the imagination to the ideal.

IX. (April 30.) *Judgment and reasoning*: relation between logic and psychology: concept, judgment, reasoning correspond generally to term, proposition, syllogism: essential meaning of thinking is an adaptation of means to ends on the ideational plane: the purposive aspect of apperception: distinction between mere redintegration and thinking: the laws of thought as thought: the fundamental condition of all mental process: what underlies fallacies.

X. (May 7.) *Human nature*: general tendency to over-estimate the cognitive aspect: relation of knowledge to character: temperament the physical basis of character: classification of temperaments and of character types: advantages and dangers of such classifications: personality: permanency of temperaments and means by which they may be modified: types of troublesome pupils: treatment of the different temperaments in school.

XI. (May 14.) *The emotions*: value of the emotions in human life: like sensations they are subject to the law of relativity: emotions are to be utilized, not eliminated: cause of popular depreciation of the emotions: emotions are to be regulated by ideas: classification of the emotions: their expression: Lange-James theory of relation between emotion and its expression: element of truth in the theory and its great practical importance to teachers.

XII. (May 21.) *The will*: relation of will to feeling on the one hand and knowledge on the other: the appeal of the motive: fallacy of "the strongest motive": resolution of the dualism implied in the process of making up one's mind: metaphysical excrescences obscuring the problem of the freedom of the will: the evolution of the will in its relation to desire: the possibility of the training of the will: fundamental importance of the time element in this training.

**The Fee for the Course of Twelve Lectures is Half-a-Guinea.**

\* \* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

Oxford and Cambridge Edition,

Post free.

**THE NORMAL PREPARATION TEST MAPS.**

1d. each net. (Copyright.)

By REGINALD GILL, F.R.G.S., London Chamber of Commerce.

This New Series of Test Maps has been produced in order to provide a ready means of discovering the Geographical Knowledge of the Pupil. The form in which each Map is issued gives all Pupils, for the first time in Test Maps, an equal opportunity. In fact, the name list attached to every Map records the work attempted by the Pupil. *The Material upon which the Pupil is required to show his knowledge accompanies each Map in such a manner as to obtain the fullest results.*

**UNIFORM WORK BY EACH SCHOLAR.**

Instructions to Junior and Senior Students are provided, together with hints for suitably doing the work. Specimen lettering is included.

**COLOURED TEST MAPS.**

The Map is already coloured for the Student, so obviating this inconvenient process in School work.

**OUTLINE MAPS SUPERSEDED.**

Though not requiring the Pupil to complete the actual outline, the Normal Test Maps supply sufficient data in Art Colours to enable him to do the work. By this means the objection against all other Outline Maps that the Pupil has no practice in drawing the contour is removed.

**THE SERIES INCLUDE:**

**EUROPE:** British Isles and North Sea, England and Wales, Scotland, Ireland, France, German Empire, Italy, Balkan Peninsula, Russia.  
**ASIA:** India, AFRICA, N. AMERICA, UNITED STATES, AUSTRALIA.

*Specimen Map free to Teachers.*

A Key to the whole of these Test Maps is issued, entitled *The Sphere Atlas*, 1s. 6d.

*Complete Catalogue post free.*

LONGMANS, GREEN, & CO., LONDON, NEW YORK, BOMBAY, AND CALCUTTA.

# THE BEST BOOKS FOR 1908

**Higher English.** By F. J. RAHTZ, M.A., Lecturer in English at Merchant Venturers' Technical College, Bristol. Second Edition. Crown 8vo, 3s. 6d.

A Text-book for the English section of the London Matriculation Examination.

**The Complete School Chemistry.** By F. N. OLDHAM, B.A., With 126 Illustrations. 4s. 6d. [*Text-Books of Science.*]

The object of this book is to provide a progressive but complete course in Practical and Theoretical Chemistry up to the standard of the London Matriculation.

In use at Bedford Grammar School, Dulwich College, Durham School, Loretto School, Nottingham High School, Wellington College, Sutton Girls' High School.

**Nouvelle Grammaire Française.** By J. G. ANDERSON, B.A., Examiner to London University, the College of Preceptors, and the Welsh Intermediate Board. Crown 8vo, 2s.

**Exercices de Grammaire Française.** By J. G. ANDERSON, B.A. Crown 8vo, 1s. 6d.

A course for Matriculation Candidates who have been taught by the reform method.

**A Junior French Prose.** By R. B. N. BARON, M.A. Second Edition. Crown 8vo, 2s.

"We like this book very much; it is so sane and practical. The author has wisely avoided giving too much assistance, as is too often the case, by putting the notes in such a form as to leave practically nothing for the learner to do; altogether a really excellent book for the class or for the private student."—*Teachers' Times.*

**French Prose Composition.** By R. B. N. BARON, M.A. Crown 8vo, 2s. 6d. Key, 3s. net.

An advanced course on the same lines as the above.

**Easy Exercises in Algebra.** By W. S. BEARD. Containing 3,500 problems. Crown 8vo, with Answers, 1s. 9d.; without Answers, 1s. 6d.

**A Junior Geometry.** By NOEL S. LYDON, of Owen's School, Islington. With 276 Diagrams. Fifth Edition. Crown 8vo, 2s.

**An Easy Poetry Book.** Selected and arranged by W. WILLIAMSON, B.A., Author of "Dictation Passages." Crown 8vo, 1s.

[*The Beginners' Books.*]  
A little book for pupils of twelve or thereabouts. It is believed that all the selections are good as poetry, healthy and invigorating in thought, and suited to the capacity of beginners.

## METHUEN'S SIMPLIFIED FRENCH TEXTS

Edited by T. R. N. CROFTS, M.A., Modern Language Master at Merchant Taylors' School, London. Fcap. 8vo, 1s. each.

**L'Histoire d'une Tulipe.** Founded on "La Tulipe Noire," by A. DUMAS. Adapted by T. R. N. CROFTS, M.A.

**Abdallah; ou, le Trèfle à Quatre Feuilles.** By EDOUARD LABOULAYE. Adapted by J. A. WILSON.

**THE LITTLE GERMAN CLASSICS.** Price 6d. each Volume. The leading German Authors in Poetry, Story, and Drama.

## A LATIN COURSE.

By E. H. SCOTT, B.A., and FRANK JONES, B.A.

First Course, cloth, 1s. 6d. Second Course, cloth, Illustrated, 2s. 6d.

The HEAD MASTER of an important Grammar School writes:—

"I am more than delighted with Scott and Jones's 'Latin Course.' It is one of the most craftsmanlike books that I have ever handled. My raw youngsters now using it may be said to LIKE their Latin Lessons."

## A FIRST LATIN GRAMMAR.

By E. H. SCOTT, B.A., late Head Master of the Boys' Secondary School, Barberton, Transvaal, and FRANK JONES, B.A., Assistant Master, King Edward's School, Aston, Birmingham.

Crown 8vo, cloth, 2s.

Great care has been given to the arrangement and typographical display of the matter, in order to secure the utmost clearness. Thus, use is made throughout of a synoptical arrangement of parallel columns which shows the various declensions and conjugations side by side, bringing out their differences and resemblances.

A special feature is the number of examples given. These are, for the most part, taken from the First and Second Courses, so that the student will have met the examples before in a connected passage.

## LATIN TEXTS.

Cloth, 6d. net. or 8d. net.

Edited by W. H. D. ROUSE, Litt.D., Prof. POSTGATE, Prof. REID, &c., &c.

The only Series that fulfils the conditions suggested by the Classical Association as to the improved teaching of Latin, and containing no notes.

## A GENERAL VOCABULARY TO VIRGIL.

Prepared under the Editorship of A. GRAHAM, M.A.

Crown 8vo. Cloth, 1s.

## A GENERAL VOCABULARY TO CAESAR'S GALLIC WAR.

Prepared under the Editorship of A. GRAHAM, M.A.

Crown 8vo. Cloth, 1s.

These vocabularies have been prepared for use in schools where the pupils are not at first provided with Latin Dictionaries of their own. They contain all the words that occur in the *Aeneid*, *Bucolics* and *Georgics* of Virgil, and *De Bello Gallico* of Caesar. The advantage of the vocabularies is that they can be used with any Edition of these Classics.

## ARITHMETIC.

By A. E. LAYNG, M.A., formerly Scholar of Sidney Sussex College, Cambridge.

Cloth, complete, 4s. 6d. In Two Parts, 2s. 6d. each.

EXERCISES ONLY, 1 Vol., complete, 2s. 6d. Part I., 5,000 Examples, 1s. Part II., 3,500 Examples, 1s. 6d.

In use at most Boys' Public Schools, and in EVERY Girls' School of importance, including Cheltenham, St. Paul's School, Colston's Girls' School, Bristol; and the High Schools at Clapham, Manchester, Notting Hill, Bedford, Sydenham, Shemeld, York, Liverpool, Newcastle-on-Tyne, Gloucester, Hull, Kensington, Exeter, Birkenhead, Baker Street, Dudley, &c., &c.

## BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. 72 Volumes. To be used in correlation with the study of **English Literature** and **History**.

Among the leading Authors are:—

Malory.	Gibbon.	Drake.	Thucydides,	Dickens.
Froissart.	Macaulay.	Raleigh.	Plutarch.	Charles Lamb.
Bacon.	Carlyle.	Anson.	Livy.	Kingsley.
Burke.	Prescott.	Hawkins.	Marcellinus.	Swift.
Ruskin.	Josephus.	Cook.	Lucian.	Borrow.

## COMBINED COURSE OF LITERARY READING AND COMPOSITION.

Illustrated from Famous Pictures. Edited by LEWIS MARSH, M.A. 2s.

## THE PLAIN TEXT SHAKESPEARE.

The greater Plays. Text only. No notes. In limp cloth cover. Price 4d. each.

## OGILVIE'S SMALLER ENGLISH DICTIONARY.

A Pronouncing, Etymological, and Explanatory Dictionary at 1s. net.

## ENGLISH POETRY FOR THE YOUNG.

Selected by S. E. WINBOLT, M.A. A chronological selection of English poetry, clearly printed and well bound in cloth, 1s.

Write for full particulars to BLACKIE & SON, Ltd., 50 Old Bailey, E.C.

The Educational Times.

Meetings of the Month.

THE Christmas holidays have brought the usual series of meetings of schoolmasters and schoolmistresses, and the newspapers have faithfully reported their proceedings. The growth of such meetings is a healthy sign, and so is the increased interest taken in them by the public. There was a time when the College of Preceptors was the only society to bring members of the profession together, alike for what may be called educational politics and for the study of methods of teaching. On both lines the example of the pioneer society has been followed by many sectional associations, and London, as well as Rome and Florence, Grindelwald and Adelboden, has become a winter resort of the profession. The burning (or smouldering) question of registration, long the happy hunting ground of the College alone, has been advanced a stage by the Federal Council and by its various constituent bodies; but this belongs rather to the last term of 1907. The winter meeting of the College was inaugurated by an instructive paper by its President on the advantages to be gained by teachers from comparing notes and adding to their professional knowledge—an element of their work not adequately recognized by those who pay the piper and claim to call the tune. He was followed by Prof. Findlay with an interesting discussion of the means of developing corporate life and public spirit in day schools, showing how the subdivision of day boys into "houses," introduced by the present Bishop of Hereford at Clifton, had extended to them the benefits of the organization which had grown up naturally in connexion with boarding houses, and how it had been successfully carried out in day schools pure and simple. Many valuable lectures were given to appreciative audiences. Perhaps it is not unjust to particularize Prof. Adams's lucid exposition of some parts of the application of psychology to education, distinguished as it was by the popular treatment of a difficult subject and many apt illustrations.

At Sheffield Prof. Sadler dwelt on the duty of secondary schools to adapt themselves to the real needs of their scholars, to prepare boys for skilled industrial employ-

ment, girls for "housecraft," and both alike for citizenship. He had a good word for day continuation schools, with courses of study of a practical yet intellectually stimulating kind, and wound up with some remarks on the "eternal want of pence," pointing out how few teachers can look forward to a competence in middle life.

At the Head Masters' Association, Mr. Cary Gilson took rather a pessimistic line. On the one hand, in the multitude of counsellors by whom schoolmasters were surrounded, there was unwisdom; on the other, it was doubtful how far all our machinery and hard work produced in all cases the right results on the right boys: witness the number of them turned out fit for nothing but inferior clerkships.

The famous case of Wright v. Zetland, with the lurid light it throws on the position of the profession, was much to the fore, especially at the Associations of Assistant Masters and Assistant Mistresses. Prof. Sadler, speaking on the question whether the teachers in secondary schools should be "Civil Servants," doubted the expediency of such a solution, not only as involving many practical difficulties, but as tending to destroy the individuality of schools, and suggested a committee of appeal, with a legal chairman and some professional members, to which disputes might be referred.

The Modern Language Association took up a point of great importance discussed in our December issue—the decline of the study of German in English schools, and protested against a recent circular of the Board of Education insisting that when two foreign languages only are learnt Latin should be one of the two. An old subject of controversy was also revived—the place of translation in the teaching of modern languages. The advanced guard of the reformers, in common with many of their Continental colleagues, insist that in reading French or German texts difficulties should be met by questions asked and answered in the language studied rather than by translation into English. Their opponents dwell on the importance of translation as a training in clearness of thought and in the correct use of the mother tongue. At the English Association stress was laid by Mr. Mackail and Prof. Raleigh on the defective methods of teaching English literature generally practised in schools, where the annotated textbook is too much in evidence. They urged that the duty of

the teacher was to facilitate instead of hindering the direct contact of the pupil with literature—a counsel of perfection to which but few teachers, and still fewer examiners, conform.

Such are some of the outstanding points of immediate educational interest discussed at the numerous meetings. Many others were touched upon, and some of these are gathering strength to claim a foremost position in the near future; for example, the variety of questions connected with teaching of hygiene and the care of the health of pupils. The difficulties that press upon particular sections of the teaching body, though chiefly left to be grappled with by the individual groups, cannot but come to appeal strongly to the sympathies of the whole profession. We regret that it is impossible for us, within our limits, to report at anything like adequate length, not merely so many excellent papers, but even the general course of the multifarious discussions. The keenness of interest manifested throughout the various proceedings is a good omen for future progress and for sustained hope.

### NOTES.

IN all the programmes of all the educational associations whose meetings we chronicle—all too briefly—this month, there is no question of more urgent importance than the position that has to be faced by the private-school masters. They acknowledge frankly the demand that secondary education should be within the reach of all the children of the nation; but they contend justly, as well as naturally, that the suppression of their order is not necessary or justifiable in order to attain that end. At first it seemed as if Education Authorities were going to use their powers in the reasonable sense contemplated by Parliament—that is to say, to supply the local needs in the light of the local educational provision already made by private as well as by public enterprise; and some of the Committees have undoubtedly interpreted their duty in that sense. Unhappily, however, many Authorities have assumed the right to make complete provision under public control, so as to bear hardly upon, if not to squeeze out entirely, the local private schools. Apart from the particular hardships, which are entirely unjustifiable (and, we believe, entirely unintended by Parliament), this cruel procedure is a serious educational danger, as being a menace, or rather a stroke, at “the elasticity and variety of type which have hitherto been the grand feature of our educational system.” It is most important that this aggressive action should be arrested and limited. The Private Schools Association will have a wide and deep sympathy from the public as well as from all other branches of the teaching profession.

THE resolutions passed by the Association of Assistant Masters in Secondary Schools with regard to inspection and examination are perfectly reasonable, and they are applicable beyond the secondary range:—

- (1) That, in order to command the confidence of assistant masters, it is essential that the Inspectors and Examiners appointed should have had considerable and successful experience as schoolmasters.
- (2) That the inspections should be so arranged as to allow an oppor-

tunity for quiet personal conversation between the Inspector and the assistant master—not in the presence of the class, but where criticism can be candid, confidential, and sympathetic. (3) That the suggestions of the Inspector can be more freely offered and more freely considered if they are put forward in the first instance as recommendations only. (4) That, when possible, it would be convenient for the master to know at the beginning of the lesson whether the Inspector wishes to be merely a spectator or to intervene in the conduct of the lesson. (5) That the Inspector's formal report on the work of the staff should be placed in the hands of each master.

The essential thing is that Inspectors and Examiners should be not merely distinguished in some department of University studies, but men of practical experience in the particular field of work. All the rest follows as matter of reason and goodwill. The only remarkable element in the case is that at this time of day there should be any need for making such representations to a superior authority.

THE sympathetic treatment of the tenure of Assistant Masters by the Head Masters' Conference is one of the most pleasant episodes of the recent educational meetings. Dr. Gray's statement that “the position of the assistant master at the present time is scandalously unsafe” was not a bit too strong. The fact that “the difficulty of securing good assistant masters is becoming greater” is no doubt a telling practical argument, and the welfare of the assistant master is closely associated with the welfare of the school and with the smooth and efficient working of the organization; but the moral argument goes still deeper. Dr. Gray pointed to the claim of the assistant masters that, after a certain period of probation, they should be considered somehow or other as part of the institution. The claim is right: length of service identifies the servant with the institution, and that in ways not represented by salary. It is to be hoped that the joint meeting of the committees of the executives of the two Associations will succeed in formulating proposals acceptable to the Board of Education, who are understood to be very favourable to an equitable rearrangement.

### IMPORTANT EDUCATIONAL MEETINGS.

#### THE ASSOCIATION OF HEAD MASTERS.

The Annual Meeting of the Incorporated Association of Head Masters was held at the Guildhall, London, on January 9 and 10, Mr. R. Cary Gilson (Birmingham), President, in the chair. Mr. Gilson advocated “Two unpopular reforms.” The first reform was a “muzzling order”—a protest against the clamorous and discordant racket about education. About the second reform he was far less sanguine. How was it possible to feel satisfied that, with all their machinery and expenditure and enthusiasm and hard persevering work, they were producing the right results upon the right boys in their schools—in any of their schools, from the village elementary to Eton College itself? In the past fifty years was there not an almost entire disappearance of apprenticeship and a completely altered view taken by the majority of parents of the nature and extent of their obligations to the rising generation? Granted that free education had produced many of the good results anticipated for it, were these things a complete compensation, even in the present, for the loss of that sturdy resolve to see the children launched in the world which was formerly characteristic of the humblest class of British parent? And what of the future? That sturdy resolve, that entirely laudable and desirable assumption that the children's careers were the parents' business, which had almost quitted the strata where education had now been free for close on forty years, was steadily receding from the lower middle class, whose education, thanks to multiplied scholarships, maintenance allowances, and other facilities, was, to all appearances, in process of becoming

free at no distant date. What were the results? In the first place the unwillingness—he did not mean inability—to pay for education; and this tendency to put the whole responsibility for the children's future on the school, the municipality, or the State was a deplorably bad and alarming sign of the times—bad for the rate and tax payer, bad for the parent, and worst of all for the children, with whom the strongest of all incentives was the knowledge that their parents were making sacrifices on their behalf. Secondly, it meant that we were turning out in hundreds of thousands from our elementary schools—but, alas! also in considerable numbers from our secondary schools as well—boys of no special aptitude for anything useful and no particular views as to what they were going to be, who found employment only too easily as boys because of the low wages, but learnt no trade, and too often drifted, through the successive stages of hopelessness represented by the words “unskilled,” “casual,” “out of work,” and “unemployable,” to mere social wreckage and destruction. Now, if history taught anything, it was that this was a most serious symptom in the body politic—a symptom so dangerous, indeed, that it could not develop far or continue long without killing the patient outright. He was democrat enough to wish to see the right son of collier or chimney sweep sent to Eton and Oxford and into Parliament at twenty-three; but our present system did very little in this direction, while it turned innumerable good artisans and domestic servants into very inferior and wretchedly paid clerks. This was the problem into which he would like to divert some of that energy of discussion which was at present expended on details of the curriculum and fantastic proposals about hygiene.

Mr. F. H. Chambers (Lincoln) moved the preamble to the first resolution, which ran: “That this Association welcomes the new regulations for secondary schools, so far as they remove restrictions and limitations which have been found detrimental to educational progress under the previous regulations; but it respectfully submits, &c.”—Mr. White (Boston) seconded.

The Rev. W. Madeley (Woodbridge) moved as an amendment the addition of the words, “but deprecates the employment of financial pressure as a substitute for legislation,” after the words “previous regulations.”—Mr. Taylor (Raine's School, London) seconded the amendment, which, after a short discussion, was carried by 58 votes to 35.—Mr. Chambers then proposed the following section (a) of Resolution I.:—“That care should be taken to prevent the use of such regulations as a means to transform the constitution and character of secondary schools already established under schemes.”—Mr. A. E. Holme (Dewsbury) seconded, and the section was carried *nem. con.*—The Rev. J. R. Wynne-Edwards (Leeds) moved section (b):—“That in schools established under scheme, the composition and rights of governing bodies should be carefully safeguarded in respect of regulations issued from time to time by the Board of Education, and of action taken by Local Education Authorities.”—Mr. R. W. Hinton (Cricklewood) seconded, and the section was carried *nem. con.*—Mr. Martin (Bath College) moved section (c):—“That it is inexpedient to lay down a fixed general rule as to the proportion of free places that should be reserved for pupils from elementary schools.”—The Rev. W. E. Catlow (Bridgwater) seconded.—Mr. R. W. Hinton (Cricklewood) moved as an amendment the substitution in section (c) of the words, “who are qualified in subjects of elementary education,” for the words “from elementary schools”; but the amendment was withdrawn.

Mr. W. Caldecott (Wolverhampton) moved the following rider to section (c):—“And that free places in public secondary schools hitherto reserved to pupils from public elementary schools should be open to all duly qualified candidates, irrespective of their place of previous education.”—Canon Swallow seconded.—Section (c) was then carried *nem. con.*, and the rider was afterwards also carried.

Dr. Rendall (Charterhouse) moved section (d):—“That, in estimating the percentage of free places granted to boys attending elementary schools, only the number of day boys admitted should be taken into account, and that schools largely or wholly dependent upon boarders should not be placed on the same footing as schools of a more purely local character.”—After considerable discussion, the section was eventually carried.

Mr. W. W. Vaughan (Giggleswick) moved:—“That, having regard to the case of Wright v. Zetland, this Association approves of the action of the Council in the appointment of a Committee to consider, with a similar Committee of the Incorporated Association of Assistant Masters, the best means of giving to assistant masters a more secure tenure of office.”—Mr. S. R. Hart (Handsworth) seconded.—The Rev. W. Madeley

(Woodbridge) moved as an amendment:—“That this Association, having regard to the case of Wright v. Zetland and to the refusal of the Board of Education to receive assistant masters' appeals, empowers the Council (1) to appoint a Committee to consider *de novo*, with a similar Committee of the Incorporated Association of Assistant Masters, the best means of giving the assistant masters a more secure tenure of office; and (2) to take action on the Committee's report.”—Mr. R. H. Elliott (Rishworth) seconded the amendment, which was lost; and the motion was then carried *nem. con.*

The Rev. W. Madeley (Woodbridge) moved a resolution expressing the opinion that the possession of a degree of some recognized University or its equivalent should be made a condition of admission to the new register. In the course of his remarks he said that he had on his own staff a man with an Oxford Honours Degree, who, in order to qualify himself as a practical teacher, served for five years in a London elementary school. That man could not get on the secondary teachers' column of the old register because he had not gained his experience in a secondary school. That example would help them to realize the great grievance which the National Union of Teachers had about “Column B.”—Several members urged that the requirement of a Degree would be far too rigid, and Dr. Gow (Westminster) moved to add a proviso that the new Council should, within twelve months of their first meeting, have power at their discretion to admit to the register persons not qualified under the conditions named.—The resolution was carried, with the addition of Dr. Gow's proviso.

The Rev. C. J. Smith (Hammersmith) moved a resolution expressing the opinion that the recent tendency of the Board of Education to urge the employment of a greatly increased proportion of specialist teachers was not beneficial.—Dr. A. E. Salter seconded the motion, and, after some discussion, it was carried.

Mr. Gutteridge's motion for the introduction of the metric system into secondary schools was lost.

#### ASSOCIATION OF ASSISTANT MASTERS.

The Annual General Meeting of the Incorporated Association of Assistant Masters in Secondary Schools was held at Merchant Taylors' School on January 10, Mr. R. F. Cholmeley (St. Paul's), Chairman of the Association, presiding. The report dealt mainly with the Richmond School case as marking a definite stage in the history of tenure. The membership was stated to exceed 2,000, a third of whom came from Conference schools.

Mr. T. E. Page (Charterhouse) moved:—“That, in view of the intolerable position created by the judgment in the Richmond School case, whereby secondary teachers are liable to instant dismissal, without appeal and without redress, the Board of Education should be called upon to promote legislation for the purpose of securing to teachers (a) reasonable notice in case of dismissal, or salary in lieu of notice, and (b) an appeal to some public authority before whom the dismissed teacher should have the right of urging his case in person.” He said assistant masters were, under this judgment, advertised to the world as men who could be wronged with impunity, and they had to make it clear that they were determined to find out a remedy for what was at present an intolerable wrong. The Board of Education, which had certainly been lukewarm in the past, assured them that they had its sympathy, and they could only hope that that official sympathy might be changed into vigorous assistance. The Association had not fought the struggle merely to claim such rights as a private servant had at the hands of a private master. They claimed to be doing public work and to be public servants, and that they were not liable to dismissal except for just cause and after a full hearing by some proper and publicly appointed tribunal.—Mr. C. H. Greene (Berkhamsted) seconded the resolution, which, having been amended by the addition of the words “or by his representative” after the word “person,” was unanimously carried.

Prof. Sadler read a paper on “Should Secondary Teachers be Civil Servants?” Speaking, first, of the advantages which would be likely to follow from the organization of the teaching staff of secondary schools as a branch of the Civil Service, he said the change, if it ensured to every qualified teacher a reasonably progressive salary, with a pension at sixty years of age, would undoubtedly remove a grave element of weakness from English secondary schools. The improved prospects opened would increase the supply of competent men, and maintain the supply of competent women candidates. The change would be accompanied, or quickly followed, by the enforcement of some

form of professional training in the duties of teaching, and by enhanced requirements as to intellectual preparation. It would involve an alteration in the conditions of the tenure of assistant teachers—a tenure which was now precarious in many secondary schools—and entail financial readjustment which would lessen any unfair disproportion which existed between the salaries of the head master and his assistants. The change would, on the other hand, have great disadvantages. It would increase Government control over the inner life of secondary schools at a time when experiment and free development were especially necessary in English secondary education. It would impair the individuality of character of different schools and would lessen the variety of their tone and influence. It would curtail the teachers' freedom of utterance and power of independent association. The conditions likely to be imposed upon those wishing to become secondary-school teachers might, in laying special stress upon intellectual fitness, take too little account of the other qualifications which were necessary for what was essentially a pastoral office. But the central difficulty of the situation seemed to him to lie in the fact that the teaching profession was, by the nature of its duties, on the border line between private employment and public service. Opportunities for experiment and free development were as indispensable to its welfare as was a due measure of public supervision. There would also be special difficulties in England. It would be found, he thought, almost impossible to draw a satisfactory line between elementary and secondary education. A further difficulty was presented by the existence of the great endowed schools which, in English education, enjoyed a dignified semi-independence of State control. The future of many efficient proprietary and private schools would also be affected by the change. Nor could the position of secondary teachers be treated alone. The case of the elementary teachers, and possibly of the University teachers, would come up for corresponding treatment. His own conclusion was that, in present circumstances at any rate, the best interests of higher education in England would not be served by making secondary teachers Civil servants.

#### ASSOCIATION OF ASSISTANT MISTRESSES.

The twenty-fourth Annual General Meeting of the Association of Assistant Mistresses was held at Dr. Williams's Library, Gordon Square, on January 11, the President, Miss M. A. Hodge (Notting Hill), in the chair. Miss E. M. Bancroft (Redland High School, Bristol) was elected President for 1908, and Miss K. Andrews was re-elected Honorary Treasurer. The report stated that the progress which had taken place was due rather to the gradual formation of a sound public opinion than to any special decisions respecting educational legislation. A strong side in the direction of unity seemed gradually to be sweeping all before it, head masters and head mistresses, and assistant masters and mistresses, having sunk all petty differences and exhibiting now a strong tendency to act in unison.

Miss Hodge gave an account of the work done by the Association during the past year, referring especially to the Removal of Disabilities (Women) Act and the Education (Administrative Provisions) Act. Several resolutions on school curricula were then brought forward. After discussion, the following were adopted:—(1) "This meeting is of opinion that there is a need for secondary schools for girls of different types, with different curricula or combinations of curricula—*e.g.*, one type in which the curriculum is planned for a majority of girls leaving at the age of eighteen or nineteen, and then, it may be, continuing their education at places of University rank; secondly, another type in which the majority of girls leave at the age of sixteen; thirdly, a type in which there is a post-school course, chiefly for training either in domestic science or in art. In many cases all three types, or, at any rate, the first and second, might be advantageously combined in the same school." (2) "That up to the age of twelve—*i.e.*, practically in the lower school—the general course of education should be the same in all types of secondary schools." (3) "That the fewer the subjects taught in the lower school the better for the mental development of the child. The curriculum in this part of the school should consist mainly of English; four and a half hours, exclusive of geography and history, being the minimum. Only one language, other than English, should be taught. Practical geometry should be the only mathematical subject in addition to arithmetic, and it should not be introduced till the last year of the lower school course." (4) "In the middle school the curriculum should include in some part or other: (i.) a survey of general history that will be a

foundation for the more detailed work of the upper school in English and European history; (ii.) a course of elementary practical science. The curriculum of the upper school should be very elastic, certain subjects being alternative in order to avoid overpressure and to allow of specialization. For this reason, the Association welcomes the new regulations for secondary schools in so far as they allow of greater elasticity."

With regard to the new register, the following resolutions were passed, after discussion:—(1) "That the Association of Assistant Mistresses feels strongly that it should have a representative on the new Registration Council." (2) "That at least one-fifth of the Registration Council should be women." (3) "That the Registration Council should be composed of representatives of secondary, elementary, and technical education and of the Universities, together with some Crown nominees." (4) "That, while the Association desires that high academic qualifications should ultimately be required for admission to the register, they think that temporary regulations should be made, as in the case of the present Register."

Miss Lee (City of London School for Girls) gave some interesting criticisms of the modern methods of teaching geometry. In the discussion certain advantages of the modern method were emphasized.

#### THE PRIVATE SCHOOLS ASSOCIATION.

The Annual General Meeting of the Incorporated Association of Private Schools, representing about a thousand of the largest and most efficient private schools and having branches in every part of the country, was held at the College of Preceptors on January 10. Sir Henry Kimber, M.P., was re-elected President. —The annual report, which was adopted, commemorated another successful year. They could not, it stated, fail to be impressed with the growing tendency to bring under State control the whole, or the greater portion, of secondary and higher education. This tendency the Association must endeavour to arrest. Secondary education should be within the reach of all, but the multiplication of rate-maintained or rate-subsidized secondary schools (which had by unfair competition done so much to bring ruin to private enterprise) was not necessary, as an extension of the scholarship system was preferable to the policy of free, or nearly free, secondary and higher education in institutions under direct public control, which would prevent the elasticity and variety of type which had hitherto been the grand feature of their educational system. Already in municipal schools the head master was tending to become a mere executive official. The Bill promised for the coming year was looming large and fearful before them. In reference to the position of Local Authorities and private schools, and the persecution to which the latter were liable, it was stated that if private schools refused to co-operate when invited to do so with the Local Education Authorities they cut themselves off from all hope of further consideration, and added to the difficulties of those who were fighting for the recognition of private enterprise as an integral part of the national system of education. It was announced that the General Secretary, Mr. H. R. Beasley, would next week commence a visitation of every part of the country.

#### UNIVERSITY WOMEN TEACHERS.

The Annual Meeting of the Association of University Women Teachers was held in University Hall, Gordon Square, on January 3, Miss Clough, Vice-Principal of Newnham College, in the chair. The report showed that there are now 1,780 members, 244 new members having joined during the year. There had been 622 applications for teachers and 231 appointments made, great difficulty having been found to meet the demand for highly qualified teachers to whom large salaries were offered. A discussion took place upon the rules regarding membership, in which the view was generally taken that the qualification which should be possessed by women teachers admitted to membership was a University degree or its equivalent.

Prof. Sadler gave an address on "Comenius: his Influence on Modern Education." He outlined the salient facts of the life of Comenius, and said his two fundamental principles were—(1) that all instruction must be carefully graded; and (2) that, in imparting knowledge to children, the teacher must to the utmost appeal to the faculties of sense perception. First, there was the home school up to six years of age, then the vernacular school up to twelve years, then the Latin or secondary school to

eighteen years, and finally the University for another six years. Comenius believed that everything depended on education in childhood. Four hours a day was his ideal of school work, and many of his ideas were taken from the excellent and stimulating example of the Jesuit schools. The vernacular school curriculum was to be very wide—in fact, he might be charged with being the author of that modern evil, the overcrowded curriculum. The flaws in the work of Comenius were that he failed to realize the immense range of knowledge and to foresee the development of science; he laid far too much stress upon the epitomized textbook; he did not make proper allowance for the stupid boys; and he always assumed the identity of religious belief among all the pupils. But in many ways Comenius had had a profound influence on modern educational thought. No one more than he stood out for equality of educational opportunity for girls as well as boys; no one saw more than he the educational importance of the earliest years of life; and no one saw much earlier than he the value and the necessity of bringing the study of Nature into the work of the schools, though he was so bookish that he thought you could bring the study of Nature into the form of pictures in a book. For his own part, he thought Comenius was not very discriminating in his judgment, and in a country like our own great care should be observed in attempting to apply, without much qualification and exception, his theories to the educational problems before us. But he was one who was fired with unconquerable faith in the power of education, and his own words were his best epitaph—"I thank God that I have been a man of aspiration."

#### PUBLIC SCHOOL SCIENCE MASTERS.

The Annual Meeting of the Association of Public School Science Masters was held at Westminster School on January 14, Dr. Henry A. Miers, F.R.S., Waynflete Professor of Mineralogy, Oxford, presiding.—Prof. Miers took as his subject, "The Order in which Scientific Ideas should be presented (a) in Public Schools; (b) at the Universities." He strongly deprecated any too rigid demarcation of science into subjects, and said that he had far too firm a belief in the individuality of the teacher to suggest that any one method should be prescribed for the teaching of science. However, while he thought that individual experiments in method might be encouraged, he felt that it was in the matter of order that scientific teaching lacked system and was placed somewhat at a disadvantage with other subjects in which there was a recognized order based upon prolonged experience, and that what they had to secure was that science should form an integral part of any liberal education and should stand upon the same level as languages and mathematics. What he counselled was the presentation of the ideas, freed, it might be, from the old nomenclature and expressed in modern phraseology; illustrated by new and better examples, but laid before the pupil in the historical order, so as to allow the science to unfold itself before his mind in a natural sequence. He believed that the spirit of inquiry should be the real inspiration of all scientific teaching, and that there was absolutely nothing that could be compared with experimental work as a means of promoting that spirit. He advocated Nature study as the beginning of scientific training; but in Nature study he would include the intelligent observation of anything and everything that was going on around, and not merely the processes of Nature familiar to those who led a country life. If only ordinary boys could, early in life, get into their heads the notion that science was but the intelligent study of ordinary things, they would cease to regard it as a mere educational task. In school teaching there was a great want of continuity. Observational work should come very early in the teaching of a child, just as it came before experiment in the history of science, and should be accompanied by some teaching in physiography or the sort of science that involved reading and exercise of the imagination, introducing examples of the chief laws of physics and chemistry. If this could begin before a boy came to a public school, he would then be prepared for experimental science with some information upon which it could be based. The systematic teaching at a public school should be, from the outset, experimental, and the spirit of experimental inquiry should be cultivated as soon as it was possible to begin systematic instruction. But he thought that a good deal of scientific information could well be absorbed by a child, and that the spirit of intelligent inquiry might be awakened before the learner began systematically to weigh and to measure. There was a danger, he thought, lest scientific training too systematically confined might lead to the very fault which experimental

science was expected to avoid—namely, scientific dogmatism. As to the order in which scientific ideas might best be presented to students at the University, he said that here, even more easily than at school, the teacher should be able to steer his course by the history of science; for it ought to be possible to carry on the scientific training as a whole and not by one subject after another, even for a student who was only beginning science seriously for the first time at the University. Scientific education at a University should be designed for students whose minds were formed, and they should be put as far as possible in the position of intelligent inquirers really approaching scientific problems with a desire for achievement. Here the spirit of research should absolutely dominate the teaching, and the ideas should be presented as they presented themselves to the original discoverer.—Prof. Armstrong, Sir Archibald Geikie, Mr. C. E. Ashford (Royal Naval College, Dartmouth), Mr. F. W. Sander-son (Head Master of Oundle School), the Rev. J. C. Fitzpatrick (Queens' College, Cambridge), and Dr. T. J. Baker (King Edward's School, Birmingham) joined in the discussion.

Mr. C. F. Mott (Giggleswick) read a paper on "The Educational Value of Mechanics," and Mr. H. Wilkinson (Durham) a paper on "The Teaching of Practical Mathematics." Mr. L. Cumming (Rugby) delivered an address on "A Scheme of Laboratory Work in Physics"; Mr. W. E. Cross (Aldenham) contributed a paper on "A Suitable Curriculum for the First and Second Years," and Mr. J. M. Wadmore dealt with the subject, "The Compulsory Teaching of Elementary Physics to Junior Forms."

In connexion with the meeting there was an interesting exhibition of scientific apparatus, the principal feature of which was a number of Leyden jars which belonged to and were used by Henry Cavendish, but which were only recently discovered at Chatsworth by Mr. Douglas Berridge, the honorary secretary of the Association.

#### CONFERENCE OF LONDON TEACHERS.

A three-day Conference of Teachers in Elementary and Secondary Schools and Technical Institutes, called by the London County Council, was opened on January 2 at the Medical Examination Hall, Victoria Embankment.—Dr. Baxter Forman, Vice-Chairman of the Education Committee of the Council, presided.—Dr. Percy Nunn, Vice-Principal of the London Day Training College, in a paper on "The Place of Nature Study in the School Curriculum," said that the primary business of the educator was not to teach certain "useful subjects," but to cultivate a certain group of interests, and, further, in this group, the interest to which Nature study appealed held an important place. There was no difficulty in assigning Nature study to a definite group of school disciplines. Though it had very close relations with the aesthetic side of the curriculum, it had clearly to be considered on the whole as an integral part of the instruction in science. Science of the higher type could not be a completely healthy growth unless it sprang out of a foundation of Nature study.—Mr. H. E. Turner (Bellenden Road School) read a paper on "School Excursions," and Mr. J. T. Winkworth (Cable Street Higher-grade School) contributed a paper on "The Use of the School Museum in Nature Study."

The Chairman opened a discussion on the teaching of botany. He mentioned that in the ordinary Council Schools in London there were 16,841 pupils taking botany and 2,332 in the non-provided schools, though botany was not mentioned in the Government Code as a subject which should be included in the elementary-school curriculum. The lesson should be a demonstration rather than a lecture—a luxury to be enjoyed rather than a task to be imposed. In the year ending March, 1907, the County Council had supplied 7,500 boxes, containing over five and a half millions of botanical specimens, for the use of the schools.—Miss Lullam (Lecturer on Botany in King's College) delivered an address on "Nature Study as a Preparation for the Study of Botany"; and Miss Von Wyss, Lecturer on Nature Study and Art in the London Day Training College, offered suggestions for the practical teaching of botany to large classes in elementary schools.

The London Chamber of Commerce, said the Chairman, was the first public body in this country to organize a movement in favour of improved commercial education in our schools, with the result that some thirty-six Chambers of Commerce and thirty Education Authorities were to-day heartily aiding in the furtherance of that object. It was gratifying to know that, since the Chamber of Commerce had initiated its scheme of examinations, no fewer than

34,802 candidates had been presented from the various schools, of whom about 18,358 had secured certificates of proficiency. This work had been carried out at a cost of £27,000, towards which the business men of London had contributed £14,500, including a sum of about £3,500 from the Chamber's corporate funds. He might add that more than four hundred firms gave preference, in engaging employes, to the holders of the Chamber's certificates, while these same holders could obtain appointments without charge through the Chamber's employment department. —Papers were read by Mr. A. Kahn, on "Commercial Education in Day Schools"; by Mr. J. Sinclair, on "Commercial Education in the Evening Schools"; by Mr. B. Dumville, on "Higher Commercial Institutions in French Switzerland"; by Mr. Douglas Owen, on "The Need of Training for Business Men"; by Prof. L. W. Lyde, on "The Teaching of Geography as a Subject of Commercial Instruction"; and by Mr. A. Kahn, on "The Teaching of Modern Languages as a Subject of Commercial Instruction."

Sir John Cockburn said that manual training was of priceless value, and it was simply a recognition of the dictates of physiology in the development of the child.—Mr. J. C. Hudson, Director of Manual Instruction under the Hornsey Education Committee, said that in America manual training occupied a foremost place in the curriculum of the schools, and was developing in a most remarkable manner.—Discussing English elementary schools, Mr. P. R. Ballard, District Inspector of the London County Council, said that under fifty-five Education Authorities in England practically no hand-work was taught. Sixteen authorities seemed, however, to have some sort of systematic scheme of instruction. The most important of these were Kent, Middlesex, Liverpool, Leeds, and Nottingham. He did not think that they had sufficient hand-work in the London schools.

#### NORTH OF ENGLAND EDUCATION CONFERENCE.

The sixth Annual Meeting of the North of England Education Conference was opened at the University of Sheffield on January 3, under the presidency of Prof. M. E. Sadler. Prof. Sadler reviewed the change that had come over the spirit of English education during the last ten years, and touched upon the chief difficulties that now retard its progress. He said that the most important changes in our educational methods and outlook could be traced to the influence of modern science. Scientific psychology had thrown light upon the critical nature of the years of adolescence. Applied science had led to remarkable developments of technological training. Sociological inquiries suggested the need for special educational and industrial discipline for the feckless and the idle. Scientific analogy, by making men think of the community as a social organism, had strengthened the movement towards Government control over individual waywardness and inefficiency. The second group of changes were those connected with the rapid growth of State influence in English education. But the movement in favour of the intelligent public supervision of all schools from Eton to the kindergarten had been accompanied by a growing sense of the value of individuality in education. This had shown itself most clearly in the successful movement for the education of girls and women and in the increased value set upon art and poetry in education, because these cultivated the imagination and developed individuality of thought and feeling. Thirdly, there was the change in social outlook in English education. The old idea had been that each class in the community should have its own educational arrangements. But a new middle class was forming itself through the rise of the skilled artisans. The latter realized the value of education, and were seizing the opportunities offered to their children by the system of scholarships, upon which about £400,000 was now spent annually in England alone. But they felt that the schools should do more to train boys for skilled industrial employment and girls in housecraft, and both for the duties of citizenship. The chief defects in English elementary education were the large classes in many schools, which made individual teaching almost impossible; the overcrowded curriculum; the too early age at which the majority of the children left school; the half-time system in the textile districts; and the tendency in large schools to burden the head teacher with administrative and clerical duties. The intellectual vigour of our higher secondary education was impaired by premature specialization in classical scholarship, and especially by the too early beginning of Greek. The higher education of girls and women was disproportionately concerned with the recruiting of the teaching profession. But the welfare of any educational system depended chiefly upon the alert efficiency and pastoral gift of the teachers. The prospects of men teachers in

middle secondary schools were lamentable and called for immediate improvement.

Prof. Hicks, F.R.S. (Sheffield University), read a paper on "The Function of a Modern University." He pointed out that new Universities must chiefly serve local needs, and that one of their distinguishing features must be their specialization in some branch of applied science, in which it must be the ambition of each to be unique. It was also the duty of a local University to keep in close and sympathetic contact with the community and to extend the bounds of knowledge.—Dr. Forsyth (Leeds), who read a paper on the same subject, feared there was a danger in a University taking too local a view of its functions; and Mr. A. Mansbridge (secretary of the Workers' Educational Association), dealing with the subject from the point of view of the citizen, said he conceived one of the functions of a University to be to take her part in the maintenance of a great highway running through the schools to herself and to sweep away barriers to intellectual development.

Dr. R. H. Crowley (Bradford) and Dr. Dukes (Rugby) discussed "The Medical Inspection and Treatment of School Children in Primary and Secondary Schools." Among the other subjects dealt with were "The Teaching of History," by Mr. H. J. Snape (Sheffield) and the Rev. Prof. G. H. Godwin (Durham); "Holiday and Open-air Schools," by Mr. C. H. Wyatt (Manchester) and Mr. Ernest Gray; "Compulsory Attendance at Evening Schools," by Mr. J. Crowther (Halifax) and Principal J. H. Reynolds (Manchester), and others.

#### THE MODERN LANGUAGE ASSOCIATION.

THE Annual Meeting of the Modern Language Association was held at Queen's College, London, on January 7 and 8. The report stated that the Association during the past year had taken an important part, in co-operation with L'Entente Cordiale, in initiating the movement for the establishment and endowment of the *Guilde Internationale* at Paris, which was doing valuable work in furnishing facilities for the study of French by English-speaking people as well as in promoting the study of English by French men and women. The Association is now co-operating with the *Société d'Échange International des Enfants* in promoting the exchange of children between English and French families for the holidays or longer periods. The committee, which is inquiring into the training of modern language teachers, has secured the aid of the Rev. E. S. Roberts, Vice-Chancellor of the University of Cambridge, who will act as chairman. Lord Fitzmaurice has accepted the presidency of the Association for 1908. The general meeting of 1909 will be held at Oxford, and that of 1910 at Cambridge.

The President, Mr. F. Storr, delivered an address on "The Art of Translation." The Battle of the Books, he said, still raged. The extreme classicist still preferred to study natural history from Aristotle rather than from Darwin, and would sooner read Sophocles in Greek than Shakespeare in his native tongue. The extreme left of the modernists held that translation was the Ahriman of language teaching, or, like Mr. Cobden, thought that a single number of the *Times* contained more information than all the works of Thucydides. But these extremes would meet in acknowledging that by the transmitted wisdom of the ancients we are what we are, and that the transmitters of the lamp of life had been mainly the translators. It was only from a translation that we knew the very foundations of Christianity; it was in a translation that the arts of Greece were first introduced into rustic Latium. It was on translation that our "morning star of song," Chaucer, tried his prentice hand till he found himself and far outstripped his French originals. It was from a translation of a translation that Shakespeare quarried the materials for his "Coriolanus," "Julius Cæsar," and "Antony and Cleopatra"; and of Keats, with far more truth than of Shakespeare, it might be said that he knew small Latin and less Greek. Were they bound to accept Lewes's sweeping generalization, supported as it was by some convincing instances, that all verse translation was either a fraud or a failure? It was not the conclusion of the many, nor did he think it would convince the experts among his audience. It was obvious that no language could exactly reproduce the single words, let alone the connected phrases, the rhythm and harmony of another language. Each language had its own idiosyncrasies; words were like coins, each with its own image and superscription for which no exact equivalent in a foreign coinage existed. Even that metaphor was inadequate, for a word was a living organism, ever taking to itself new accretions and shedding part of its substance. The

translator knew, or ought to know, that to the commonest words in English and French, for instance, there clung a whole network of associations, to which he must attend at the risk of bathos. When he had considered the equivalents that would suit the context, the hardest part of the translator's task remained. He had so to rearrange or modify the words and phrases that the metre or rhythm or harmony of the whole passage at once satisfied the ear, and at the same time was an echo of the original or at least affected the foreigner in the same way as the original affected a native. The question could not be confined to poetry, but must embrace as well literary prose. Young and old alike read with delight Hans Andersen and Cervantes before they mastered Danish or Spanish, and it needed not a knowledge of Arabic to appreciate "The Arabian Nights"; and there was one Book that all, whether clerks or laymen, read and studied mainly in a translation. Translation was an art, but it had very slowly been recognized as such, and in no art had theory lagged so far behind practice. There was a plain issue between the literalist and the spiritualist schools, and he unhesitatingly took his stand on the text, "The letter killeth, but the spirit giveth life." If they would judge the two schools by their fruits, they could not select a more crucial instance for comparison than the Authorized and Revised Versions of the New Testament. He had often thought what a mistake the revisers made in not co-opting to sit with them two or three masters of English—J. H. Newman, Froude, Tennyson. How different would have been the result! To make a perfect translation required something more than exact scholarship; it needed the literary sense, the ear attuned to harmony, inspiration. There were the misses, more in number than the sands of the sea. But there was a long list of successes. They were justified, perhaps, in drawing the inference that poetry could be adequately rendered only by a poet. For fidelity, as opposed to literality, he cited Dryden's paraphrase of Horace, "Odes," l. 29. He considered that any attempt to naturalize a metre that was alien to the genius of the language was predestined to failure, and that any attempt to write quantitative verse in English was absurd, though in this he was not prejudging the vexed and intricate question of English hexameters. In conclusion, he held that verse must be rendered by verse, and he wholly dissented from Mr. Lang's dictum that a prose translation of the "Odyssey" must convey the meaning of Homer more faithfully than could any verse translation.

Mr. E. L. Milner-Barry moved the following resolution:—"That this meeting, considering it desirable that greater encouragement should be given to the study of German in schools, urges the Board of Education to reconsider its policy that where only two foreign languages are taught in a school one must be Latin, unless good reason can be shown for its omission." He said the resolution was framed with special reference to schools in receipt of a Board of Education grant. He found that in 119 of our secondary schools in receipt of public money, while 16,668 girls and boys were taught French, only 3,224 were taught German. And in 40 of the girls' schools, while 5,291 girls were taught French, only 765 were taught German. This showed what a parlous condition the teaching of German had reached. The Board of Education, it appeared, were wedded to Latin.—Mr. H. W. Eve, in seconding the resolution, said the policy of the Board of Education, in trying to cram Latin and Greek down the public throat, was a departure from the principle of allowing schools to develop freely and spontaneously. The controversy really was between German and Latin as a means of education, but as the real benefit of Latin educationally was found in its higher stages, which were not reached in these schools, he thought that German would be a superior educational instrument.—Dr. Breul strongly supported the resolution which, after some discussion, was carried, with three dissentients.

Considerable difference of opinion was evoked on the question of "The Place of Translation in Modern Language Teaching," which was introduced by Mr. F. B. Kirkman, and various other papers were read.

The resolutions on the age for beginning languages, which were passed at a Conference held in 1906 of representatives of the Assistant Masters' Association, the Classical Association, and the Modern Language Association, were then considered. Only the first of the five resolutions was agreed to, which was as follows:—"That before a scholar begins the study of a second language he should have developed some power of correct speaking and writing in English, and should have acquired some knowledge of the functions of words and of their grammatical relations to one another." In place of the remaining resolutions the fol-

lowing were unanimously adopted:—(1) "No age limit for beginning languages can be laid down which can be profitably applied to the various types of schools for boys and girls where one or more foreign language is taught." (2) "That in schools where a classical and modern language are both taught, the modern language should in all cases be begun first." (3) "That a second foreign language should not be begun till a sufficient standard has been attained in the first, which in most cases would require two years' study."

#### THE ENGLISH ASSOCIATION.

The Annual Meeting of the English Association took place at University College, London, on January 10 and 11. The report stated that the growth of the Association had been rapid and continuous. There were in all 558 full and 420 associate members, although it was little more than a year since the Association had been formed. The Executive Committee had decided that, for the present, the Association's publications should take the form chiefly of bulletins and leaflets. The bulletins were issued quarterly, and contained a record of the proceedings both of the central body and of the local branches, as well as other information of importance to all interested in the progress of English.

Canon Beeching delivered a lecture on "A Modern Critical Poet, William Watson."—Of wider practical interest was a keen discussion on "English in Secondary Schools," introduced by Mr. J. H. Fowler (Clifton). Mr. Fowler said the present moment marked the second opportunity offered to English schools for repairing their long neglect of the national literature. The first opportunity, given about thirty-eight years ago, was largely missed owing to the influence of methods adopted from the classical curriculum, of annotated editions and examinations, of a tendency to emphasize the study of the historical origins of the language whilst neglecting the vital elements of literature. The old mistakes were not likely to be repeated, but there were dangers in the present against which they should be on their guard—the dangers of impressionism, sentimentalism, specialization, and materialism. There was the danger of substituting for the old-fashioned study of books read at a painfully slow pace a mere hazy impression of the history of literature; the danger of a revolt against accurate and scientific study; the danger of isolating the study of English from other studies; and the danger of ignoring the spiritual side of literature.—Miss G. Clement, who read a paper on "English in Secondary Schools," laid stress on the disciplinary and moral value of the teaching of English in education.—A conference was also held upon the Association's provisional leaflet on the "Teaching of Shakespeare in Secondary Schools," in which Mr. Sidney Lee took part.

#### EDUCATIONAL INSTITUTE OF SCOTLAND.

The thirty-fourth Annual Congress of the Educational Institute of Scotland was held at Dumfries Academy on December 30 and 31. Mr. John M'Whan, F.E.I.S., President, in the chair. Mr. M'Whan remarked on three great drawbacks to educational progress: "(1) Our classes are too large and unwieldy; (2) our children are too closely packed; (3) our school furniture is clumsy and inconvenient." "In short, money is at the root of the question." A resolution—a hardy annual—" (a) That this Congress urges the Government to pass an Education Bill for Scotland during the ensuing session; (b) that this Congress is of opinion that no educational legislation will be satisfactory which does not provide for the administration of primary, intermediate, and secondary education over suitably large areas by a single authority elected for that purpose"—was unanimously carried. The preliminary education, training, and certification of teachers, the necessity for better terms of super-annuation, the question of tenure, and medical inspection of schools, formed subjects of considerable discussion. A very interesting address on "The Colour Characters of the School Children of Scotland" was given by Mr. J. F. Tocher, F.I.C., who acknowledged handsomely the indebtedness of himself and his Committee of inquiry to the teachers "for responding so magnificently to the invitation to provide the necessary data."

At London University, during the session 1906-7, 38 students submitted essays in candidature for the University Extension Sessional Certificate in Honours, as against 36 in the previous session. Of these 21 were approved for the Sessional Certificate in Honours, while 9, although not reaching the high standard required for the Honours Certificate, were "commended" by the lecturers and the examiners.

## CORRESPONDENCE.

## THE STATE AND SECONDARY EDUCATION.

To the Editor of "The Educational Times."

SIR,—It is to be hoped that all who are interested in any way in secondary education will carefully watch at this juncture the administrative activities of the Board of Education. Its action in this field includes the giving of grants for apparatus and teaching, making provision for the admission of scholars from public elementary schools, arranging for the partial education of intending teachers in such schools, and the like. It would also appear that certain of the functions of the Charity Commissioners in respect of school endowments may now be exercised by this Board. There is no doubt that its hold on secondary schools will tend gradually to become stronger and more autocratic.

The results will work out somewhat in the following manner:—

(1) In the personnel of the scholars. This will be materially changed when 25 per cent. or so is derived from public elementary schools. (2) In the character of the instruction. Such scholars would have to be dealt with separately in respect of such subjects as Latin, French, and mathematics, or it would come to pass that boys and girls of twelve or so would be put into classes with younger pupils. (3) In the character of the religious teaching. This would lose any distinctive and denominational character it may have possessed, and would tend towards the type that is sought to be imposed upon our primary schools.

It will be realized how much all this would avail to alter the character of our endowed grammar schools—(a) in respect of the class of scholar, (b) in respect of the limits of instruction, (c) in respect of guarantees of moral and religious training, (d) in respect of the lowering of their status. The consequence would be that such schools would become less popular with the class which has hitherto resorted to them; neither would this class be attracted by any lowering of the fee that may be brought about—but rather repelled.

Apparently there would follow a revival of interest in the private school, where the fee would be moderately high, where individual attention would be secured, and where the Head would

be free to impart moral and religious instruction in a definite form, without any limitation of his discretion or authority by indeterminate Imperial or Local Authorities.

I am not expressing any opinion as to the desirability or undesirability of such changes as may be induced by class feeling or the like, or as to the balance of advantage or disadvantage to the community; but a question having been addressed to me as to the trend of State action in the matter, I have tried to suggest an answer thus publicly, inasmuch as it is a matter of grave moment both to parents and teachers, so that all alike should hold a watching brief.

To the heads of private schools the moral of the situation would appear to be: "Trust in God and keep your powder dry. Do not be in a hurry to enter into embarrassing relations with Local Education Authorities."—I am, Sir, &c.

Chillenden Rectory, Dover.

J. O. BEVAN.

January 1, 1908.

THE Board of Education desire to call the attention of governing bodies and persons responsible for the management of secondary schools to the provisions of chapter viii. of the current Regulations for Secondary Schools, which deals with the proposed establishment of a list of those schools which are recognized by the Board as efficient. Schools recognized for the Board's grant will, as stated in the Regulations, be placed automatically upon this list, but this will not be done in the case of schools recognized by the Board only for the purposes of Sections 3 and 4 of the Teachers' Registration Regulations. The first list of recognised schools will probably be issued in the course of the summer, and the authorities of any school who seek inclusion in the list, and have not yet made the necessary application to the Board, are requested to do so with as little delay as possible. The Board cannot guarantee that all applications will be dealt with in time to admit of the inclusion of the school in the first list, but it is desirable that they should have applications before them by an early date, in order that the necessary arrangements for inspection may be made with reasonable notice to the schools and with due regard to the other engagements of the Board's Inspectors.

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.  
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.  
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

*THE CLERGY AND THEIR RELATIVES.*

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,242,820. Annual Income, £453,897.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS.  
LARGE BONUSES.

Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES.

Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

1. WHOLE-LIFE CONVERTIBLE ASSURANCES. Very Low Premium—about one-half the usual rate—during first ten years.

2. PENSION POLICIES. Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

## SPECIMEN OF RATES FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 80 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

## A SELECTION OF RELFE BROTHERS' BOOKS

FOR THE LOCAL AND COLLEGE OF PRECEPTORS' EXAMINATIONS, &c., 1908.

### SHORT FRENCH EXAMINATION PAPERS (110).

Each containing Six Idiomatic Sentences to render into French.

Very useful for Oral Work. Second Edition. Price 2s. 6d., cloth.

"A very useful set of questions."—*Modern Language Quarterly*.

"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers, 6s. net. (A list of errata is issued with this.) By H. R. LADELL, M.A., F.R.G.S., late Head Master of the London International College, Isleworth.

### THE PUBLIC SCHOOL SPELLING CARD.

Fiftieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

### FRENCH ESSENTIALS AND FRENCH CONVERSATION SENTENCES.

Third Edition. Price 2s. cloth. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement is good, and there is nothing superfluous."—*Journal of Education*.

### EXAMPLES IN PRACTICAL PHYSICS.

By R. C. BRIDGETT, M.A., B.Sc., F.C.S. Price 6d.

A collection of carefully graduated examples of moderate difficulty on Mensuration, Hydrostatics, and Heat which will be found of great service in supplementing the work of Science classes.

Ezra, Nehemiah, and Esther (1 Vol.)

St. Mark.

St. Luke.

Kings II.

Acts of the Apostles.

Full Notes on both Versions by  
G. CARTER, M.A.

Maps, Historical Tables, &c.

Crown 8vo, cloth, 1s. 6d. each.

These books are all done on the same admirable plan, and are in use in nearly all Schools that prepare for Examinations.

### KINGSLEY'S HEROES. Illustrated.

With Notes by F. GORSE, M.A. Cloth gilt, 1s. 6d.

### SPELLING, DICTATION, & COMPOSITION EXERCISES.

For Preliminary Forms, 3d.; Junior Forms, 3d.; Middle Forms, 6d.;  
Upper Forms, 6d.

Invaluable for Spelling and Composition—always weak subjects.

### OUTLINES OF ENGLISH LITERATURE.

By H. E. EVANS, B.A., L.C.P.

With Biographical Sketches, Chronological Tables, Index, and full Historical Appendix. Cloth, 1s. 6d.

### MILTON'S L'ALLEGRO, IL PENSEROSO, AND LYCIDAS

With Notes by F. GORSE, M.A. 8d.

### THE LOCAL EXAMINATION PHYSIOGRAPHY.

By W. J. PERRY, M.A., LL.D.

A Special Edition to meet every point in the new Geography Syllabus except Political. With Illustrations, Diagrams, and Maps. Cloth gilt, 2s. 6d.

### JUNIOR PHYSICAL GEOGRAPHY.

By the same Author. 1s.

RELFE BROTHERS, LTD., 6 CHARTERHOUSE BUILDINGS, ALDERSGATE, LONDON, E.C.

## COLLEGE OF PRECEPTORS' CERTIFICATE EXAMINATIONS, 1908.

**Caesar.—Gallic War, Books I., II.** By A. H. ALLCROFT, M.A., and others. 1s. 6d. each. Vocabulary. 1s. each.

"A clearly printed text, a good introduction, and an excellent set of notes go to make up a very good edition."—*Schoolmaster*.

**Cicero.—In Catilinam, I.-IV.** By J. F. STOUT, B.A. Camb. 2s. 6d. [In the press.]

"The notes are worked up with the minuteness and care usual in this series, and with full historical references" (Cicero.—"In Catilinam, III.")—*Practical Teacher*.

**Euripides.—Hecuba.** By T. T. JEFFERY, M.A. Camb. 3s. 6d.

"We are inclined to think that this is one of the best volumes of the University Tutorial Series which have yet appeared. The notes are clear and helpful."—*School World*.

**Horace.—Odes, Book III.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. 1s. 6d. Vocabulary. 1s.

"A straightforward serviceable edition."—*Journal of Education*.

**Vergil.—Aeneid, Books I., X.** By A. H. ALLCROFT, M.A. Oxon., and others. With complete Alphabetical Lexicon. 1s. 6d. each.

"The notes are clear and scholarly."—*Journal of Education*.

**Xenophon.—Anabasis, Book I.** By A. H. ALLCROFT, M.A.

Oxon., and F. L. D. RICHARDSON, B.A. 1s. 6d. Vocabulary. 1s.  
"The notes are all that could be desired. We desire to record our high opinion of this edition."—*Schoolmaster*.

**Shakespeare.** Edited by Prof. W. J. ROLFE, D.Litt. Merchant of Venice. 2s. Julius Caesar. 2s. 6d.

**Arithmetic, The Junior.** Adapted from "The Tutorial Arithmetic." By R. H. CHOPE, B.A. With or without Answers. 2s. 6d.

"Excellent."—*Educational Times*.

**Book-keeping, Junior.** By THOMAS CHALICE JACKSON, B.A., LL.B., Lond., Barrister-at-Law. 1s. 6d.

"The book is an excellent one."—*Accountants' Magazine*.

**French Course, Junior.** By ERNEST WEEKLEY, M.A. Lond. and Camb. Second Edition. 2s. 6d.

"The execution is distinctly an advance on similar courses."—*Journal of Education*.

**French Reader, Junior.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. Second Edition. 1s. 6d.

"A very useful first reader, with good vocabulary and sensible notes."—*Schoolmaster*.

**Latin Course, Junior.** By B. J. HAYES, M.A. Second Edition. 2s. 6d.

"Better than most grammars that we have seen."—*Secondary Education*.

**Latin Reader, Junior.** By E. J. G. FORSE, M.A. Lond. 1s. 6d.

"A well graded and carefully thought-out series of Latin selections. The vocabulary is worthy of very high praise."—*Educational News*.

**Mechanics, Junior.** By F. ROSENBERG, M.A., B.Sc. 2s. 6d.

"The general style of the book is eminently calculated to teach in the clearest manner possible."—*Electrical Review*.

**Trigonometry, Junior.** By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. 2s. 6d.

"Is intended for students preparing for the College of Preceptors' examinations, but is suitable for any one of that standard."—*School World*.

### CURRENT EVENTS.

At the Members' Meeting of the College of Preceptors on February 19, Mr. F. Charles will read a paper entitled, "Suggestions from America to English Educationists."

ON February 13, Prof. Adams will deliver at the College of Preceptors the first of a course of twelve lectures to teachers on "The Application of Psychology to the Work of the School." The course will be helpful to students who are preparing for the Diploma Examinations of the College.

PROF. A. V. SALMON will address the Société Nationale des Professeurs de Français en Angleterre on "Denis Diderot, 1713-1784," at the College of Preceptors on February 29, at 4 p.m.

THE *London University Gazette* (December 25) gives a preliminary list of University Extension Courses arranged for the Lent Term.

THE public lectures on Dante's "Paradiso" will be given by the Rev. Dr. Moore at University College, London, on February 5, 6, 12, 13, 19, and 20, at 3 p.m.

THE Geographical Association's Lectures on the Teaching of Geography will be delivered at University College, London: February 14, "Scientific Method in the Teaching of Geography," by Prof. R. A. Gregory, F.R.A.S.; February 28, "Physical Geography an essential part of School Geography," by Mr. T. Alford Smith, B.A. 8 p.m. Non-members may obtain tickets from Mr. J. F. Unstead, 5 Wiverton Road, Sydenham, S.E.

AT Bedford College for Women (University of London) Mr. H. R. Hall, M.A., British Museum, will lecture on "New Discoveries in Crete," on February 13; Miss Adelaide Anderson, H.M.I., on "The Progress of the Factory Acts," on February 17; and Prof. L. C. Miall, F.R.S., on "Bird Study in 1555 and Subsequently," on February 27. Hour, 5.15 p.m. Open to the public.

THE Royal Sanitary Institute's course of lectures on "Hygiene in its bearing on School Life" will begin on March 2, at 7 p.m. (Parkes' Museum, Margaret Street, W.).

THE University of Dublin has conferred the degree of D.Litt. upon Mr. H. F. Berry, of the Record Office, Dublin; Mr. Harold Littledale, Professor of English Literature, University College, Cardiff; Miss Maud Sellers, and Miss M. H. Wood.

OXFORD UNIVERSITY has conferred the honorary degree of M.A. upon Mr. E. S. Dodgson, of Jesus College.

THE HON. SIR A. T. LAWRENCE, Judge of the High Court, and Lieut.-Colonel Sir Richard C. Temple, C.I.E., formerly

University Tutorial Press, Ltd.,  
W. B. CLIVE, 157 Drury Lane, London, W.C.

Chief Commissioner of the Andaman Islands, have been elected Honorary Fellows of Trinity Hall, Cambridge.

THE Symons Memorial Gold Medal of the Royal Meteorological Society has been awarded to M. Léon Tesserenc de Bort, of Paris, "in consideration of the distinguished work which he has done in connexion with meteorological science, especially the study of the upper air."

DR. JOSEPH OGILVIE, who recently retired from the Rectorship of the Aberdeen Training College, has been presented with his portrait in oils on his attainment of his educational jubilee.

MR. H. O. WILLS has promised £100,000 towards the endowment of a University for Bristol and the West of England, provided that a charter be obtained within two years. £250,000 is required before application for a charter, and £197,000 has been given or promised.

MANCHESTER UNIVERSITY is, after all, to receive £12,000 by way of special grant from the Treasury for the current year, instead of the reduced sum of £10,000.

A REDUCED copy in bronze of Mr. Goscombe Jones's statue of the seventh Duke of Devonshire, late Chancellor of the University of Cambridge, has been accepted by the University.

AN anonymous donor has given £20,000 to Columbia University to found a "Humane" Chair, "in order that special attention may be directed to the study of means by which cruelty to animals may be better prevented."

EXETER COLLEGE, Oxford, offers a scholarship in Modern History, £60 a year, and one or two Exhibitions, £30 a year. Candidates for the scholarship to be under nineteen on March 24; no age limit for the Exhibition. Examination begins March 17. Certificates of birth and character to the Rector as early as possible.

MR. W. WARDE FOWLER, Fellow of Lincoln College, Oxford, has been appointed Gifford Lecturer in Glasgow University, as from October, 1909.

THE RIGHT HON. SIR ALFRED WILLS, late a Judge of the High Court, has been elected President of Hartley University College, Southampton.

MR. DAVID K. PICKEN, M.A., chief assistant to the Professor of Mathematics, Glasgow University, has been appointed Professor of Mathematics in Victoria College, Wellington, N.Z.

THE REV. J. B. MCCLELLAN, M.A., has resigned the Principalship of the Royal Agricultural College, Cirencester, after more than a quarter of a century's service.

MR. L. BREBANT, M.A. Oxon., has been appointed Assistant to the Professor of Moral Philosophy in the University of St. Andrews.

MR. W. H. PORTER, B.A., T.C.D., has been appointed Lecturer in Greek and Latin at University College, Bangor.

DR. GEORG SCHAFFS, Ph.D. Gött., Assistant Lecturer in German Language and Literature, Liverpool University, has been appointed Lecturer in German Language and Literature and Teutonic Philology in the University of St. Andrews.

MISS JULIA BELL has been appointed assistant in the Department of Applied Mathematics in University College, London.

THE Secretary of State has made the following appointments to the Indian Education Service:—Mr. Alfred Charles Bray, B.A., of Jesus College, Cambridge, to be Professor of English at the Morris College, Nagpur; Mr. Henry Lambert, B.A., of Trinity College, Cambridge, to be an Inspector of Schools in Bengal; Miss Mary Elizabeth Honeyburne, M.A., Victoria University, Liverpool, to be Junior Inspectress of Schools in Bengal; and Mr. W. S. Holloway to be Superintendent of the Madras School of Arts.

THE REV. PREBENDARY H. W. MOSS, M.A., proposes to resign the Head Mastership of Shrewsbury School in the present year.

MR. ALLAN R. SMITH, M.A. Oxon., H.M.I.S., has been appointed Head Master of Loretto School, in succession to Mr. Tristram. Mr. Smith is an ex-captain of the Oxford University Rigger team, and has played for Scotland.

MR. WALTER G. GUILLEMARD, M.A., Senior Classical Master at Harrow, has retired after twenty-eight years' association with the school.

MR. W. W. WALLACE has been appointed Head of the Department of Applied Mechanics in Liverpool University. Mr. Wallace has been a Whitworth Scholar (Crewe Mechanics' Institute), a trooper in the South African War, Professor of Science at Victoria College, Stellenbosch, Examiner in Mathematics in the Cape University, and Engineer to the technical staff of the Kimberley diamond mines.

MR. G. ST. L. CARSON, M.A., has been appointed Head Mathematical Master at Tonbridge School, in succession to Mr. H. Hilary, who is retiring after thirty-eight years' service. Mr. Carson was Second Wrangler in 1896, and has been Reader in Mathematics at Sheffield University and Chief Mathematical Instructor at the Battersea Polytechnic.

MR. THOMAS A. LAWRENSON, Head Master of the Runcorn Institute County Secondary School, has been appointed Head Master of the South Shields Municipal Secondary School. He is succeeded by Mr. Luther Gledhill, of Sir John Dean's Grammar School, Northwich.

MR. O. H. T. DUDLEY, M.A. Oxon., has been appointed Head Master of the High School, Poona.

MR. FISHER UNWIN is reissuing the thick paper edition of the "Mermaid Series" in the original style and bindings.

PROF. SADLER's address to the Assistant Masters' Association on the question, "Should Secondary Teachers be Civil Servants?" will, we understand, be fully reported in the February issue of the *A.M.A.*

THE inaugural meeting of the Classical Association of Ireland was held in Dublin on January 14. Dr. S. H. Butcher, LL.D., M.P., the first President, and others delivered addresses.

## THE WINTER MEETING FOR TEACHERS

### AT THE COLLEGE OF PRECEPTORS.

THE fifth of the winter meetings for teachers conducted by the College of Preceptors took place at the College on January 6 to 15. The meeting opened with a reception and an inaugural address by Dr. Wormell, President of the Council. The programme comprised short courses of lectures on "The Psychological Bases of Education," by Prof. Adams: on "Method and School Management," and on "The School and Society," by Prof. Findlay; on "The Use of the Voice," by Dr. Aikin; on "Preventable Physical Defects of School Children," and on "Healthy and Unhealthy Brain Action," by Dr. R. J. Collie; on "The Teaching of English," by Prof. Adamson; on "The Teaching of History," by Prof. Pollard; on "The Teaching of Geography," by Dr. Herbertson; on "The Teaching of a Modern Language," by Mr. Barlet; a lecture on "English Literature Teaching," by Mr. Barnett; one on "The Teaching of Geometry," by Mr. J. Harrison; and one on "Plato," by Mr. Morshead. The lectures throughout were attended by numerous audiences, who gave evident tokens of their appreciation. On five afternoons visits were paid to the London Day Training College, to the new University College School, Hampstead, to University College, to Pitman's Metropolitan School, and to the Clapham High School of the Girls' Public Day School Trust. We append the President's inaugural address and summaries of several of the lectures, and propose to publish the remainder, and one of the lectures *in extenso*, in future numbers of this journal.

#### DR. WORMELL'S INAUGURAL ADDRESS.

It is my privilege to bid you welcome to this the fifth Winter Meeting at the College of Preceptors. I offer this welcome, on behalf of the Council, to the gentlemen who are to lecture, to the members of the College, and the visitors who come to listen to them. I do not intend to detain you long, but there are three reflections respecting our present proceedings that I wish to put before you.

1. In promoting these courses the College is following its best traditions and doing work which at its foundation it was designed to do. The Charter lays down its chief *raison d'être* as follows: "For the purpose of promoting sound learning and of advancing the interests of education, more especially among the middle classes, by affording facilities to the teacher for acquiring a sound knowledge of his profession." The College has recognized that the most successful of successful teachers and leaders of teachers have been the most ardent and diligent students of both the theory and practice, the science and the art of education. In this combination the College resembles a scientific institution, with lecture room, reading room, library, and social room. One of the best and most renowned of these institutions is Count Rumford's Royal Institution in Albemarle Street, which has been presided over by Prof. Young, Sir Humphry Davy, Faraday, Tyndall, and Dewar. The statement of the Count's aim in founding it might have been used by our founders and foster parents. By introducing a word here and there to define the science, the statement would read as follows:—"The objects and aims of the Institution are to prosecute scientific and literary research (bearing on education), to illustrate and diffuse the principles of science and record observations and experiments (in mental development), to promote social intercourse between lovers of the work (of education), and to afford opportunities for collective and individual study."

2. I wish to affirm that there never was a time when such aid to teachers as is looked for in these lectures was more needed or was more important to the country. In England lately the attention of the authorities has been almost entirely engrossed by the development of the administrative machinery. There has been little recognition, on the part of County Education Committees, of the need for continuous study of methods and experiments, of observations of the working and the results obtained by these methods. London is almost the only one that has made any attempt to foster aspirations towards the professional spirit or to afford information concerning the operations of mind which would make the labour of the teacher easier and more effective. The London County Council is doing something, but even as regards London this College is called on to make provision for professional studies of those actually engaged in secondary schools, particularly in secondary private schools. There is a difference between the tendencies in America and England at the present moment in this respect, the mention of which will make the point clear. Recently an American pro-

fessor affirmed that "in whatever sphere of education their functions may lie, there is to be seen among the teachers in the States a really inspiring amount of searching of the heart about the highest concerns of their profession. The earnestness which they at present show in striving to enlighten and strengthen themselves is an index of the nation's possibility of advance in all ideal directions. The State school systems give a diversity and flexibility, with opportunities for experiment and keenness of competition, and from these happy features the most sanguine augury can be drawn." How different here! The Authorities—thinking, as they pay the piper, they have the right to call the tune—take no note of the genius of the piper or of the efforts he may make to become more skilful with his pipe. So the tune remains the same as in the beginning. They admit that teachers must be trained at the beginning, must gain certificates or degrees at the beginning; but after that there is no recognition of further study and practice. The opposite tendencies of England and America in this respect are very marked and easily observable. This temporary defect in the English system must right itself in time, and due credit will be given to the scientific investigator; but, in the interim, while Local Authorities are feeling their way to efficiency, this College must be to the fore in keeping alive the professional spirit.

3. My third point may be expressed by a question: Why should we, who have long since enlisted in the ranks of acting teachers, be now listening to professors? Is it not enough to have qualified for enlistment? Those who think so, and begrudge the time required for investigations and studies of theory, will never make good teachers. The science of education, like all true sciences, is infinite. There is no limit to the possible capacities of human intelligence, and no limit to the achievements of the educator. There are the correlated sides of his work, the science and the art; and, with a view to put before you the best reward you can expect for your zeal in attending these lectures, let me say if they only enable you to talk of educational theories they will fail. The science of logic never made a man reason rightly. The science of ethics never made a man behave rightly. The sciences of psychology and physiology never taught how to teach well. The science lays down the lines within which the best forms of the art must fall, but, at the same time, within those lines leaves ample scope for individual genius. One will do his work well and succeed in one way, another in quite a different way, yet neither transgress the laws laid down and demonstrated by the science. The art of teaching grows up in the schoolroom out of invention, discovery, and observation combined with practice. In looking for information concerning the mind's operations, which may enable you to labour more easily and effectively, you will learn from the science and the theories it builds up by reasoning what are the limits between which you must work and you will know in advance that certain methods will be right and others will be wrong. So the science of pedagogics will save you from mistakes. You will gain confidence in any method you are using as soon as you find out that it has theory as well as practice to back it. A knowledge of the pupil at once intuitive and analytic is the knowledge on which the teacher can most safely build. On our part we hope that you will enjoy these lectures and be both cheered and strengthened by them, so that at the end we may apply to both lecturers and listeners, teachers all, some words written by Matthew Arnold. He said of those from whom he had learned most:—

Beacons of hope ye appear,  
Languor is not in your heart,  
Weakness is not in your words,  
Weariness not on your brow.

Strengthen the wavering line,  
'Stablish, continue our march,  
On to the bound of the waste,  
On to the City of God.

#### THE PSYCHOLOGICAL BASES OF EDUCATION.

This subject was dealt with by Professor J. ADAMS, Principal of the London Day Training College, in a course of four lectures under the headings of (1) Consciousness, (2) Sensation and Perception, (3) Memory and Imagination, and (4) Judgment and Reasoning.

The lecturer began with the statement that as the blacksmith is a worker in iron so is the teacher a worker in consciousness. A knowledge of the nature and manipulation of consciousness, therefore, was of the first importance to the teacher. Consciousness could not be defined, but

this was the less to be regretted, as every one knows what consciousness is: it is a part of our very being, and carries its own explanation with it. The teacher, however, must not only know what consciousness is, but must be able to manipulate it both in his own person and in that of his pupil. There could be no intermingling of consciousnesses, but the very fact that the teacher-consciousness must remain for ever outside the pupil-consciousness was an advantage for the teacher, as it gave him that external standpoint that enabled him to exercise a decided influence on the pupil-consciousness. The prayer that was denied to Archimedes was granted to the teacher. Sensation was the meeting-point of the physiological and the psychological. Pure sensation was practically an abstraction, and could never be experienced, unless under very exceptional circumstances, by the adult. What we usually understood when we spoke of the training of the senses was the training of perception. The trouble of distinguishing between sensation and perception was sometimes met by using the compromise sense-perception. The real distinction, however, was that perception included sensation, and might be roughly defined as sensation plus sense, or sensation plus meaning. Perception was sometimes even defined as the cognitive aspect of sensation. It was quite possible to train perception at the expense of sensation—that is to say, after a course of what was called sense training the result might be that the pupil was able to perceive better than he did before, and at the same time his sense organs as such had been injured.

The application of perception to the ordinary affairs of life was commonly called observation, which was, indeed, sometimes defined as regulated perception. Teachers must not make the mistake of thinking that observation meant the taking note of everything that appealed for attention. This all-round observation came to be nothing else but gaping. True observation was dominated by a purpose; we observed within certain limits in order to serve some definite end. There was a point, however, at which regulated perception ceased to help us, and we had then to fall back upon general observation, in the hope of being able to utilize whatever might turn up, and so give meaning to what would otherwise be unintelligible. This point the lecturer called *the gaping point*. This point varied with every individual, and of course was much higher in the case of the teacher than it was in the case of the pupil: that is to say, the pupil much sooner reached his gaping point than did the teacher. The transition from the presentative to the representative functions was made by the process of conception. Sensation and perception dealt with presentations; conception, imagination, and memory dealt with representations. In rising order, they had first the percept of an object here and now present; then they had an image which represented more or less accurately the very object previously perceived but no longer present; next they had what might be called a generalized image or type; and finally they had the concept, which is the most abstract form of all. The newer view of the concept was not so much the power of defining or describing the unit of thought as the power of dealing intelligently with the objects represented by the concept. They had mastered the concept *table* not so much when they were able to define it as when they were able to behave intelligently in respect of all tables that might come their way. They had, in fact, passed from the static to the dynamic.

Memory and imagination had a good deal in common. Imagination had, in fact, been called an inverted memory, doing for the future what memory does for the past. It was probable that the capacity for memory as a natural gift could not be increased, though that capacity could be used with greater or less effect according to the training given to the memory. The *memoria technica* was legitimate only in so far as it confined itself to fields in which it was impossible to form rational combinations of elements. The training of the imagination had only recently begun its positive work in schools. Hitherto it had been regarded with suspicion, and the main object had been rather to restrain than to cultivate it. The danger of over-exercise of the imagination was real, but could be easily avoided. Further, the place of the ideal in the training of the imagination had been very generally neglected and not infrequently misunderstood.

The final lecture of the course was given up to judgment and reasoning, though the lecturer would have preferred to deal rather with the affective and the volitional. His reason, however, for selecting the subjects actually treated was that teachers, as a rule, were so intensely interested in the cognitive side of psychology that a course that did not include judgment and reasoning might be regarded as essentially incomplete. The subjects, however, were treated from the psychological standpoint rather than from the logical, and considerable stress was laid on the process of thinking as a fitting of means to ends, so long as the process was carried on in terms of ideas.

## THE TEACHER IN HIS CLASSROOM.

### I. METHOD.

Prof. FINDLAY'S lectures, under the title of "The Teacher in his Classroom," aimed to offer a comprehensive review of principles underlying professional practice, and also indicate directions in which progress and research are likely to lead. It was pointed out that the problem of method assumes the selection of material (curriculum or syllabus), and considers how the scholar is to be engaged upon it, and how the teacher, in anticipation, is to prepare himself to aid the scholar. Thus two separate questions were raised: (a) considerations arising from

the mental processes involved in the various school exercises; (b) those due to external conditions. The practical difficulty of method sprang from the necessity for attending to both these points at once. Taking, first, the psychology of method, we notice (a) various types of teaching corresponding to the predominant mental process. Of these, the Herbartian scheme is an example (the heuristic lesson is only a variation of the Herbartian type); a second type may be called deductive; a third type is illustrated in acquiring a practical art (learning to do things); music and other fine arts that appeal to sentiment suggest yet another typical form (learning to enjoy things). (b) We see that all these types should share in two features: the pursuit should have direct personal meaning for the scholar, and hence should be related closely to his past experience. The lecturer then directed his attention to external conditions, such as time-tables, home-lessons, use of text-books, &c. The scholar must himself "work" and produce the result—each scholar for himself. Hence, in practice, much of our teaching gets divided under three heads: the task is "set" or "assigned"; it is done or practised or studied; it is "heard" or "examined" (parallel terms used in American schools: assignment, seat-work, recitation). The third head is not logically necessary, but in practice usurps the chief place. The lecture concluded with advice to teachers engaged in regular school work, based on the foregoing analysis. The teacher's preparation of lessons has to be thought out *before* he enters the classroom, in order to concentrate his attention on management (Lecture II.).

### II.—MANAGEMENT.

In the second lecture, the audience were invited to set on one side considerations both of material and method, and to consider separately the conditions arising out of the teaching of numbers at one time in a class. The subject was treated under the following heads:—(1) The definition of a class leads at once to the central principle of *unity*. It is a meeting of persons who, for the time being, are animated by one purpose, engaged in the same mental acts. (2) As a corollary we recognize the need for *uniformity* in matters of detail. The value of routine, an illustration of the laws of habit. (3) Hence management is essentially a problem of the focus and margin of attention. The further study of management is an application of these primary considerations. (4) The art of questioning. Every scholar should make the question and think the answer. (5) Attention, from its nature, is liable to distraction, for we attend in spurts. The teacher's task is concerned with the control of these distractions. (6) Attention in individual, practical work, where the class is broken up. (7) Attention when the class is joined in co-operative exercises. (a) Distractions due to external causes, physical surroundings, interruptions from visitors, &c. (b) Distractions due to stimulus by rewards. What claim can a scholar make to be rewarded? Rewards must aid moral and intellectual progress. (c) Distractions due to disorder—the unity of the class being disturbed by an offender. The nature and end of punishment.

Among useful literature special attention was called to Tompkins' "School Management" (Ginn & Co.), and Ragley's "Class Management" (Macmillan).

## THE SCHOOL AND SOCIETY.

In his third lecture Prof. Findlay invited the audience to leave for the time the consideration of more practical problems centering round daily practice, and to consider the influence of some deeper issues involved in the planning of school curricula. He pointed out that theories of education, until recently, had concerned themselves mainly with the *individual* scholar and had paid little attention to *social* experience. And yet the scholar himself, in his inner life, had withstood this treatment, and a conflict had always been recognized. The social instincts of the young ran counter to the individualistic theory which had controlled the plans for their upbringing in schools. And this tendency could be traced in three directions. (a) Efforts have been made, especially in England, to reconcile this conflict; the play of corporate life in many schools, both elementary and secondary; distinctive features of the public school; similar plan of organization in secondary day schools. (b) Of recent years, educational theory has begun to recognize the basis of the conflict and to take advantage of the contributions of psychology. (c) The school is thus seen to be a most powerful factor in fostering social ideals—*e.g.*, the growth of municipal socialism may be connected with the collectivist spirit which controls the elementary school in contrast to the individualism of the home. Now this same conflict can be traced, from a wholly different point of view, in the divergence of the ideals of the professional teacher from those fostered by the adult society outside the school. The one seeks a curriculum governed by general ideals of development; the other requires the practical needs of adult life to be anticipated by the school curriculum. The one is, once more, individualistic; the other has been mainly social in its outlook. Having indicated the nature of the opposing forces in the conflict, the lecturer proceeded to indicate one direction in which an effort was being made to bridge the gulf. The materials for a reconciliation are to be sought in a more thorough study of human nature and especially of child nature. The contribution of the newer psychology helps us to realize the importance of motive, purpose, behaviour in the entire life of the young. Many illustrations are afforded from recent reforms in school practice: the most significant is to be found in the work of John Dewey. A description of his experimental work in Chicago concluded the lecture.

### THE HISTORY OF EDUCATION IN ITS RELATION TO THE TEACHER.

Professor FOSTER WATSON (University College of Wales, Aberystwyth), dwelt on the unity and continuity of history in all studies of human activities. The comparative historical method had been so fruitful of results as almost to revolutionize some departments of study. Theology as a study had been transformed by research into comparative religion. There was a new school of law teaching which was based on historical aspects, which brought law into touch with the social organism. The history of medical development occupied a larger share of attention than formerly. But especially in the sociological sciences, with the attention more directed than ever to origins, history had assumed a position antecedent logically to the development of theories. The latest German writer on the theory and practice of education, Dr. Barth, had pointed out that educational theory must base itself on a sociological foundation, and that the next step was to build up a criticism of education upon a historical survey of the development of education which would preserve the correlation of education with progressive changes in society. As with the theory, so with methods. All sorts of fads, misconceptions, and prejudices of the present day were due to ignorance of the experiments which had been made both on a large and on a small scale in the past. The newer plan of dealing with the method of teaching any subject was to review previous methods before the writer stated his resultant view. Thus Mr. Hartog, in his book on the teaching of English, actually traced the history of the teaching of composition in France for two hundred years, because he recognized that composition teaching had reached a higher stage in France than in England. The teaching of classics, mathematics, and even science in England had had a long experience. It was wiser to see into the results of methods of teaching those subjects before trusting to individual faddists. Old methods were much more varied and fruitful than was supposed, for the simple reason that teachers do not inquire into them. The teacher of law largely draws upon case-law in teaching the legal student. Educational case-book teaching needed development for the purpose of the practical teacher and must be founded on history. Finally, a knowledge of the history of education was necessary for the classroom teacher, so that he might enter intelligently into the continuity of national educational progress; secondly, that, as far as possible, disinterestedly, he might have material for judgment for comparing and judging the different present-day ends and co-ordinating them; thirdly, that, entering into his work with human ends, he might strengthen his manhood by imbibing something of the nobility of aim and endeavour which has characterized the efforts of educators in all ages and all climes.

#### PRACTICE AND PREJUDICE IN EDUCATION.

[This lecture will be given *in extenso* in a future number of *The Educational Times*.]

#### THE TEACHING OF ENGLISH.

Professor J. W. ADAMSON (King's College, London) dealt with this subject in two lectures under the headings of "Composition and Individuality" and "Grammar in its relation to Composition."

##### "COMPOSITION" AND INDIVIDUALITY.

The reciprocal influence of thought and its expression in a vernacular entitled the Mother Tongue to a place amongst educational instruments which, judged by results, had not yet been accorded to it in schools generally. The main reasons for the want of success in teaching "composition" to children seemed to be failure to begin its study early with *speech*, and failure to observe the rule that a composition expresses the thoughts of the writer or speaker, not those of another person. Topics, content, arrangement were all made to follow a uniform practice which might permit much labour in common, but which stultified the position of the individual writer. In order of difficulty the stages of writing were as follows: (1) Narration; (2) Description; (3) Invention; (4) Reflective writing, or "essays." The first principle of rhetoric, that a composition has a beginning, a middle, and an end, should be insinuated in the first stage, and must be made explicit in the second; at a later stage the lesson was driven home by the study and writing of paragraphs and the making of *précis*. The first two stages were the region of plain prose. Requiring a pupil to fill blanks (prepositions, conjunctions, epithets) and following this by a discussion, by the class, of differences between the pupil's suggestions and the original, or varying the mode of expression employed in a piece of uninspired prose (as turning active into passive or indirect speech into direct, or the converse), were imitative exercises free from the objection which is fatal to most paraphrases—viz., that they induce a belief that expression itself is indifferent. It was a suspicious circumstance that paraphraes is peculiarly favoured by examiners, inspectors, and other *ex-officio* Philistines. Critical discussion by the class of a classmate's writing (his identity need not be disclosed) was a profitable exercise within due measure at all stages. From that of oral practice onwards pupils should have opportunities for invention—as, adding an episode to a tale, narrating a dream, making a story. The choice of adjectives should be scrutinized, and the merely conventional and meaningless rejected. The term "essay" was more fittingly applied to such reflec-

tive writing as one would expect from pupils of seventeen to nineteen. Such pupils should study examples of style, not for direct imitation, but to become conscious that style exists. Reading, learning by rote, and translation were practices which, over and above their own specific offices, might be made auxiliaries to the teaching of composition.

##### GRAMMAR IN ITS RELATION TO "COMPOSITION."

The subject-matter of vernacular grammar and the method of teaching it were determined by the considerations: (1) that it is taught to those who are learning to write the language; (2) that the aims are—practice in analysing thought, and the attainment of a standard which would facilitate criticism of the pupils' attempts at composition. Grammarians were as prone to worry words as cats are to worry mice. Throughout the history of grammar as a school-study, matter had been sacrificed to form, definition and classification had been needlessly elaborated, and terms used to favour logic-chopping and needless subtlety. The grammarian was ever straying beyond his rightful territory; naturally the English grammarian was a confirmed trespasser. Such divagations were excused on the ground that they afford "mental training." Historical grammar should be familiar to the teacher of English grammar; the study of Latin was also necessary to foster a sound grammatical instinct in the instructor. But only those pupils who had the taste and capacity for "scholarship" should take up the study of grammar on the historical side. Most boys and girls had neither the taste nor the capacity; but all English boys and girls were capable of expressing themselves intelligibly in English, and grammar might be made subsidiary to the attainment of that purpose. Formulas and rules should not be laid down prescriptively, but should be reached inductively through exercises in reading and writing. Grammar lessons and composition lessons should move along paths almost parallel, the latter ruling the direction. Thus exercises in writing compound and complex sentences would be accompanied by a fuller study of the relative pronoun or conjunction and by the appropriate grammatical analysis. Predication was the essence of language and the unit of thought was the sentence; hence grammatical analysis would precede parsing, but the latter would find its place in the teaching of syntax. Whatever form of analysis was used, whether tabular or not, it should show clearly to the eye the relations of the different members of the sentence to each other; it should also respect the individuality of sentences. The table usually employed did neither. Parsing should involve no superfluous or illogical classifications, and should use the minimum of technicalities.

##### A DEFINITION OF ENGLISH LITERATURE:

FOR SCHOOL USE ONLY.

In dealing with this subject Mr. P. A. BARNETT said:

It was not necessary, for the practical purposes of the teacher, that he should have a definition of poetry which would satisfy the philosopher; but he must be clear enough about its effects and its modes of operation to be able to use poetry as a food and discipline for the young. What was excellent as poetry might be highly unsuitable for the school and the teacher as discipline for the young. As an integral and purposed product of man's intelligence, poetry was an art. Since, however, it belonged to a larger *genus*, literature, they could best arrive at a definition of poetry for school purposes through a definition of literature as conceived for school purposes. Speech, language, and literature were a sort of ascending scale, literature having the largest element of humanity in it. Speech might be unintelligent, but language could not; and literature implied a steady purposiveness and integral conception which language need not necessarily combine. So also it was easier—or appeared to be easier—to connect the "laws" governing speech with physical concomitants than so to connect the "laws" governing language; and, except in a very large and general way, there was very little in "physical" law to explain literature. For school purposes they should think of literature as that part of training in language, written or spoken, which was coloured by *feeling*. Books which were not conceived in emotion and did not produce an emotional effect were not *for school purposes* literature. All language was meant either to inform or persuade, even though the auditor or reader were imaginary. Mere ordered language, even if meant to inform or persuade, was not, however, literature. To make language into literature, there must be rhythm (or music) and feeling, and the feeling must not be of a kind which is peculiar and individual. It must be *generalized*; it must be such as could be communicated to all persons of a certain intelligence. Literature, as distinguished *for school purposes* from science, must be language deliberately ordered for the purpose of raising primarily emotional ideas, similar to those which are present to the writer, in all minds of a certain intelligence. It was not easy, in the case of some of the greatest writers, to say whether their work was more scientific than literary; but that did not matter to the teacher. He asked merely, if the literary discipline was in his mind, whether they were literature. If the writer's mood was a mean mood, or otherwise charged with unfit suggestion, the teacher must not use it for teaching. The teacher, therefore, must have large reading himself in order to be qualified to judge. For the teacher the difference between prose literature and poetic literature was one of degree, not kind. Verse, although poetry tends to be written in verse, was not itself poetry, and, indeed, might set forth the most unmistakable non-poetry. Rhythm

and emotion beautifully presented were essential marks of poetry. A simple rhythm repeated mechanically might produce extraordinary nervous or emotional effects; but poetry must be organic and coherent, not merely repetitive, not a mad chant. And the matter presented by the rhythm must not only be organic and coherent, but it must have worth in itself, and it must be presented with colour and individuality—it must be “sensuous” as well as “passionate.” Poetry, therefore, as the teacher was to conceive it, was rhythmical and coherent language, designed to convey emotional ideas by a free use of sensuous suggestion. This conception of poetry implied the condemnation of much of the poetry presented to children as more than mischievous. The poetry given to children should be free from suggestions of hopelessness, misery, ignoble or maudlin sentiment, and certainly should not be erotic. The moods which it should reproduce and rouse were Ruskin’s cardinal moods: admiration, hope, and love. If the poetry was really good, the teacher should present it, first of all and most emphatically, as the poet left it; it ought not to be presented for analysis, if at all, before the poet’s point of view had been, at all events, attempted. The first effect that the teacher should try to produce, in dealing with poetry as an educational discipline, was *delight*; this might well come before critical or even correct *understanding*.

### THE TEACHING OF HISTORY.

This subject was dealt with in two lectures by Professor A. F. POLLARD, University College, London.

#### THE CHILD’S VIEW OF HISTORY.

The principal difficulty in teaching history, especially to young children, was the gulf which separated the child’s mind from that of the adult—a gulf which could only be bridged by imagination, sympathy, and the faculty of putting oneself in the mental attitude of the child. In the first place, children were incapable of grasping abstract ideas; they could only comprehend concrete things which were familiar to them. Hence it was useless to attempt to teach them anything about political or constitutional principles. History must appeal to them firstly as a story, something like a fairy story, much of the fascination of which consisted in the absence of dates. Lists of dates were for the most part useless mental lumber; they were only valuable as supplying the sequence of events, and sequences could be taught by asking such questions as Whom did William I. conquer? What did he conquer? And why did he conquer? This suggested teaching history backwards—from the present to the past, and, for some reasons, this was the better plan, though not easy to carry out in practice. It was better to proceed from the known to the unknown—*e.g.*, from Edward VII. and Victoria back to the Georges, from railways back to coaches—than to attempt to project the child’s mind straight away to the strange conditions of the earliest periods of history, in which the child could not find his bearings. This progress backwards should be facilitated by the use of stories like those of Dick Whittington, Robin Hood, and Alfred and the cakes; even though they were not literally true, they could be used as illustrations, and they helped to recreate the atmosphere of the past which it was more necessary to realize than it was to know any particular date or fact of history. So, children should be encouraged to read ballads like those of “Chevy Chase” and “Flodden Field,” and, later on, historical novels and Shakespeare’s plays. It was the story which first interested the child; the next interest was that of hero-worship, and children should be allowed to specialize a little on their favourite characters, such as Mary Stuart, Strafford, or Oliver Cromwell. In no case should they be confined to the dreary text-book which some examinations seemed to require. Next there was developed the combative instinct, which might also be utilized in teaching history: pupils of fifteen years and upwards might be required to write short essays and read them aloud in class for the others to criticize; this developed their faculty of expression, and accustomed them to use their voice; it also encouraged the critical faculty. This, in turn, should encourage a scientific spirit: pupils were made to listen patiently to criticisms of their own views and to hear the views of others. This the adult rarely did; he only read newspapers which retailed to him his own prejudices, and he only went to public meetings to hear smooth things prophesied. Hence it was all the more necessary to teach children to hear both sides and seek the truth. Without this capacity to see both sides of a question, the student could never understand history, nor the adult politics. The two were closely connected, and no citizen could be regarded as efficient unless he knew something of the causes which have made him, his country, and the world what they are to-day.

#### THE EQUIPMENT OF THE TEACHER.

Could history be taught at all? Yes; provided that the teaching consisted in bringing out and developing the pupil’s mind, and not in cramming into it a mass of undigested facts and dates. Could it be taught by every one? No; because it required a sense of the complexity of human affairs and a capacity to realize conditions totally different from the present. A classical head master once said that any classical scholar could teach history if given a week’s notice, and an undergraduate remarked that history required no thinking. Neither of these authorities had any notion of what history is or should be; and Mr. Bryce had laid it down that while classics can be taught tolerably by teachers but slightly in advance of their class, the same could not be done in

history, because it required a mind historically trained. This did not necessitate a specialist in every school who should teach nothing but history, because the historical student must have studied other subjects than history. If he taught ancient history, or even modern Byzantine history, he must know Greek; he must in any case know Latin and some modern languages, French or German, or preferably both. Nor could he know history without a considerable acquaintance with English literature, from which English history could often best be taught. He must also know geography and some economics, and the historian should be able to teach some of these in the lower forms of schools while he taught history in the highest. He should, if possible, have taken history as part, at any rate, of his course of study at a University; and the ideal teacher of history should always attempt a little post-graduate study on his own account; unless he continued to be learning himself he ceased to be a good teacher. And a little research no more narrowed the mind of the historical teacher than the use of the telescope did that of the astronomer. It was true that he concentrated his attention for the time on a narrow range, but he saw much further than he otherwise could, and he could turn his historical method, when once acquired, in whatever direction he pleased. Thus he would be enabled to supplement and criticize the books he had to use. This post-graduate work was now rendered more feasible by the newer Universities, which arranged such courses for the convenience of teachers, and by the newer conception that a University should not represent a mere episode in a man’s career, but should be a source of inspiration with which teachers of all grades should be continually in touch. Even for teachers who cannot undertake such courses of study, various associations provided some means of keeping in contact with the progress of the subjects which they taught. Thus the Historical Association, with its local branches, published leaflet bibliographies for historical teachers and held meetings for the discussion of methods of teaching history; some County Councils provided lectures for teachers of history, and at some Universities there were public lectures on the subject. No teacher of history need be without help in improving his mental equipment.

#### A RATIONAL COMPARATIVE METHOD OF TEACHING GEOGRAPHY.

Two lectures on the above subject were given by Dr. A. J. HERBERTSON, Reader in Geography, University of Oxford.

The lecturer pointed out the difficulty the ordinary teacher met with in the infinite detail of topography. In an ordinary gazetteer there were over 100,000 place-names. How was a teacher to select from them? The rule must be that no place-name should be learned without some definite reason. In looking closely into the topography of various regions, it was found possible to classify it into different types, and the knowledge of the characteristics of the chief types was of the greatest possible value. It permitted the teacher and the pupil to concentrate attention on the significant forms in any region. Hence a study of land forms was an essential part of the training of a teacher of geography. Taking a map of Central Europe, the lecturer showed that with a properly hill-shaded map it was possible to pick out at a glance different types of land form—such as (1) the Alps and Jura, (2) Black Forest and Vosges, (3) the more plateau-like Rhine-Schist Highlands, (4) the Scarplands of Franconia and Swabia, (5) the conical Vogelsberg, and the various types of plain represented by the Alpine foreland, middle Rhine plain, and the Rhine delta. After discussing the main characteristics of the Scarplands he pointed out how the heights of the Seine and of the Thames basins were of this type, and showed that the succession of plain and scarped ridge passing north-westerly from London resembled that encountered running easterly from Paris. In the case of older pupils he pointed out how this topography could be correlated with structure, and showed from the geological map that the structural sequence north-west of London resembled that eastwards from Paris. He then dealt with the distribution of the main types of land forms—(a) mountain systems with parallel ridge and valley, (b) denudated highlands in regions with contorted strata, (c) table-lands with horizontal strata, (d) the lower platforms of similar strata, such as are found in European Russia, and lastly (e) of plains of recent alluvial. As an example of the value of such a study of land forms, he instanced the various types of coast which were found where these bordered an ocean, and traced the effect of the different forms in determining the ease or difficulty of access to the harbours.

In the second lecture the lecturer pointed out the inadequate treatment of climate and vegetation in many text-books. Climate was as important a part of geography as topography. The great detail of the ordinary climatic maps, however, was apt to confuse beginners, and it was well to select special lines of temperature, pressure, and rainfall for careful study and almost to neglect the rest. He suggested the lines of 0°, 10°, 20° Centigrade for the coldest and warmest months as the most important temperature lines. These divided the world into belts roughly parallel to the lines of latitude. Owing to the atmospheric circulation, to a certain extent, rainfall divisions could also be traced in parallel belts, but owing to the unequal division of land and water there were also rainfall belts parallel to the meridian where the coast-line had that trend. The result was the divisions of the world into climatic regions. Rough indications of these were to be found on vegetation maps, for vegetation was an expression of the general effect of climatic conditions in the first place, and only secondly of the character of the soil. Hence

it was well to study a vegetation map at an early stage, and to pass from the vegetation map to the climatic interpretation of it. On the other hand, the vegetation map could be made the starting-place for the study of human geography, different types of vegetation determining different kinds of occupation, and those in their turn influencing the numbers and the organizations of man. The geographer might be regarded as a man who, looking on the Earth as a whole, asks himself, "What are the bigger natural units into which this Earth can be divided?" Land and water were obvious divisions and even the belts of different types of land. But that was not enough, and the major natural region was to be recognized not merely by a uniformity of its skeleton, but by a similarity in the character of its atmosphere, of its water supply, and of its plant and animal life. Taking these into account, it was possible to divide the world into some sixty or seventy major natural regions, and to reduce these into a little over a dozen types. Of course, innumerable subdivisions could be made, but for ordinary school purposes the characters of these major regions should first be examined. Here, again, the careful study of a type was of much value, not merely because it saved time, but also because it gave the means of true comparison between different parts of the world which were comparable. The teaching of geography was not merely a teaching of facts: it was a discipline of a very high order, and for that, more than for utilitarian reasons, the subject deserved a more important place in the ordinary curriculum than it usually had.

#### THE TEACHING OF A MODERN FOREIGN LANGUAGE.

This subject was treated by Mr. S. BARLET in two lectures under the headings of: (1) Method, (2) Pronunciation.

##### METHOD.

The lecturer contrasted briefly the old methods and the new. What the new methods lacked he tersely expressed by the word "bottom": their "educative" value was artificial; they afforded little scope for thought, and involved a mechanical rather than a mental effort. They might, indeed, be somewhat showy in their immediate result—the practical use of the tongue for trivial purposes; but that did not satisfy the aims of school teaching. If lasting benefit was to be derived from the study of a modern language, it must be used essentially to train the mind. To that end, after the pupil had acquired a certain fluency of tongue in the lower stages, ability of hearing and discriminating sounds, and, above all, a thorough mastery of the *verb* in all its intricacies of moods and tenses and voices, the lecturer advocated a reversion, partial at least, to more literary or classical methods—with this difference from the old methods that, the pupil being able to use the language practically, the lessons would be given wholly in the language taught. For this purpose he divided the further study into three parallel cycles, running concurrently and reaching up to the highest form: viz., *conversation*, but on a higher level than could be reached with wall-pictures, &c.; the *reading of authors*, which would gradually develop into a study of literature; and *construction*—i.e., translation from the vernacular into the foreign tongue, including *free composition*. Each cycle was briefly sketched out. The lecturer said he regarded translation from the foreign tongue into English as an excellent mental gymnastic, provided it were well done; and he emphatically advocated translation into the foreign tongue as most conducive to the intelligent and ready use of one's own vernacular and that of the foreign tongue. The equipment necessary for the teacher was developed at some length.

##### PRONUNCIATION.

The lecturer pointed out the apparent difficulties of French pronunciation and how these difficulties could be overcome. He explained how one vowel sound followed regularly from the other. Speaking of the apparent lack of accent in French, he affirmed that spelling—that is, the proper division of words into their syllabic components—was the key to the mastery of French pronunciation. He touched upon the mute *e* and *liaison*, a sound knowledge of which could only be acquired by constant practice, and without which harmonious fluency was not obtainable. He advocated a sound practical knowledge of phonetics as a necessary equipment of the teacher, but considered that the phonic notation of French, being constant and easy to learn, did not require to be taught by means of so-called phonic symbols. He accordingly deprecated the use, and especially the abuse, of phonetism in the French classes, as it required very skilful handling and knowledge beyond the capacity of the average teacher. He considered it better to learn from the very beginning the actual notation universally adopted, rather than arbitrary symbols. Phonetism could not teach the true pronunciation; it was the master in front of the class who must do this—if he knew how.

#### THE TEACHING OF GEOMETRY.

The lecturer, Mr. J. HARRISON, pointed out some of the benefits that have already accrued from the important reform in the teaching of elementary mathematics—viz., (a) artificial barriers had been removed, with recourse to some overlapping and a more natural relationship between the various branches; (b) the use of text-books other than Euclid had permitted the inclusion of modern geometrical conceptions in the school course; and (c) the introduction of experimental and practical

work had put the teaching on a scientific basis, recognizing that, as in other sciences, so in geometry, induction and a knowledge of the concrete must precede deduction. So far all were in practical agreement, but differences became manifest when deciding on the continuance and relative importance of the practical work in the scheme of instruction. The lecturer condemned the practice of limiting the scale-drawing to a few preliminary Euclidean problems, often badly executed with insufficient tools and with little interest, and urged that graphics should become an integral and important part of the work, and should continue, along with theory, throughout the entire course, the experimental drawing gradually giving way to applied geometry. To find time for this, all theorems except the fundamentals might be excluded from the recognized book work, while leaving ample material for a full training in deductive logic. And, in order to make the graphical work successful, teachers should consult the expert draughtsman, and not Euclid, as to the choice of instruments, and should in all cases add a drawing board and tee-square to the usual meagre equipment; and, as is done in arithmetic, the practical illustrations and applications should be drawn, not merely from Euclid, but from every suitable available source, including practical work in the laboratory; the operations of the land surveyor; mechanisms such as the pantograph, made, say, in sheet celluloid; geometrical patterns and designs, and architectural features, like mouldings, &c. Typical examples of these were given. Finally, it was suggested that the very important modern conception of vectors, with practice in vector addition, subtraction, and resolution, might fittingly be included in the elementary drawing course; and also that boys should not leave school without having had to do some accurate thinking in three-dimensional geometry, not by the study of Euclid XI., but by the drawing of plans and elevations, and the measurement of lines and of angles between lines and planes, using simple geometrical models for the purpose.

[Summaries of Dr. Aikin's lectures on "The Use of the Voice," of Dr. Collie's and Dr. Biss's lectures on "Preventable Physical Defects of School Children," of Dr. Collie's lecture on "Healthy and Unhealthy Brain Action," and of Mr. Morshead's lecture on "Plato" are unavoidably postponed.]

#### ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

AN adjourned meeting of the Council was held on January 25. Present: Mr. E. A. Butler, Vice-President, in the Chair; Prof. Adams, Prof. Adamson, Dr. Armitage Smith, Mr. Barlet, Rev. J. O. Bevan, Rev. J. B. Blomfield, Rev. A. W. Boulden, Mr. Charles, Mr. Eve, Mr. Hawe, Mr. Kelland, Prof. Lyde, Dr. Maples, Dr. Moody, Miss Punnett, Mr. Rule, Mr. Starbuck, Mr. Vincent, and Dr. Wormell.

The Secretary reported that the Christmas Examination for Diplomas had been held on December 30 to January 4 and had been attended by 514 candidates. The names of those entitled to Diplomas would be submitted to the Council at their next meeting.

He reported the steps that had been taken to prosecute the offenders in a case of personation at a recent Certificate Examination.

He reported the death of Mr. G. M. Atkinson, one of the Examiners to the College in Drawing.

#### COLLEGE OF PRECEPTORS.

##### HALF-YEARLY GENERAL MEETING.

THE ordinary half-yearly General Meeting of the members of the Corporation was held at the College on Saturday, January 25.

THE SECRETARY having read the advertisement convening the meeting, Dr. WORMELL was appointed Chairman.

THE Report of the Council was laid before the meeting, and was taken as read, a copy having previously been sent to every member. It was as follows:—

##### REPORT OF THE COUNCIL.

The Council beg to lay before the members of the College the following Report of their proceedings during the past half-year:—

1. The Thirty-fifth Annual Series of Lectures to Teachers, which commenced on the 14th of February, ended on the 12th of December. It included a Course of Twelve Lectures on "The Psychological Bases of Teaching and Education," and a Course of Twelve Lectures on "Practical Problems of the Schoolroom," both by Prof. J. Adams, M.A., B.Sc., F.C.P.—The Fifth Winter Meeting for Teachers will be held at the College on January 6–15, and will be opened with a Reception and an inaugural address by the President of the Council. The Programme includes lectures on the principles and practice of education, and on methods of teaching some of the principal subjects of instruction in schools, as well as visits to educational institutions. Four lectures on Psychology in relation

to Education will be given by Prof. Adams; two on the Teacher in his Classroom, by Prof. Findlay; two on the Teaching of English, by Prof. Adamson; one on the practical bearing of the History of Education by Prof. Foster Watson; two on the Teaching of History, by Prof. Pollard; two on the Teaching of Geography, by Dr. Herbertson; one on Literature Teaching, by Mr. P. A. Barnett; two on the Teaching of a Modern Foreign Language, by Mr. S. Barlet; one on the Teaching of Geometry, by Mr. J. Harrison; three on the Use of the Voice, by Dr. Aikin; three on Preventable Physical Defects of School Children, and on Healthy and Unhealthy Brain Action, by Dr. Collie. In addition, "The School and Society" will be dealt with by Prof. Findlay, and "Practice and Prejudice in Education" by Prof. Adamson; while Mr. E. D. A. Morshead will give a lecture on Plato. Arrangements have also been made for visits to the London Day Training College, University College, the new University College School, Pitman's Metropolitan School, and the Clapham School of the Girls' Public Day School Trust. It is hoped that a large number of teachers from all parts of the country will attend the meeting.

2. At the Summer Examination of Teachers for the College Diplomas, which was held in the last week in August, the number of candidates who presented themselves was 336; while for the Christmas Examination, to be held in the first week in January, 540 candidates have entered their names. During the past half-year the Diploma of Licentiate has been conferred on 30 candidates, and that of Associate on 97, who had satisfied the prescribed conditions.

3. For the Christmas Certificate and Lower Forms Examinations, which were held in the first week in December, the number of entries was 7,593. The Professional Preliminary Examination for Certificates recognized by the Board of Education and a number of professional bodies was held in the first week in September, and was attended by 212 candidates.

4. The Council have conducted during the past half-year the examination of four schools by Visiting Examiners.

5. At the members' meetings held during the past half-year the following lectures have been given:—"On Moral Instruction in Schools," by Harrold Johnson, B.A.; "Why Boys go to School: the Boys' own Ideas on the Subject," by J. L. Paton, M.A. Reports of these lectures have been published, as usual, in *The Educational Times*.

6. During the past twelve months about 1,650 volumes have been issued to members. Substantial additions have been made to the library by purchase and by gift.

7. During the past half-year twelve new members have been elected, and notice has been received of the withdrawal of six. The Council regret to have to report the death of the following members:—Rev. T. Dallison, Miss M. E. Dorman, A.C.P., Mr. I. Macqueen, A.C.P., and Mr. H. V. McClelland.

8. The Council have been enabled, out of the surplus income accruing from the regular operations of the College during the past year, to place the sum of £400 to the credit of the reserve fund, in accordance with the resolution passed at the general meeting in July, 1906.

9. By the Education (Administrative Provisions) Act, which was passed at the end of the last Session of Parliament, provision is made for the constitution by Order in Council of "a Registration Council representative of the teaching profession, to whom shall be assigned the duty of forming and keeping a register of such teachers as satisfy the conditions of registration established by the Council for the time being, and who apply to be registered." The register is to "contain the names and addresses of all teachers in alphabetical order in one column," and "such further statement as regards their attainments, training, and experience as the Council may from time to time determine that it is desirable to set forth." The Council believe that the initiative taken by the College in promoting the registration of teachers, and its continued efforts to secure for teachers a recognized professional status, as well as the work of its representatives on the first Registration Council, justify the expectation that the College will be directly represented on the new Registration Council to be created under the above Act.

10. During the past half-year the Federal Council have held two meetings, and have discussed important matters, including the registration of teachers.

In reference to paragraph 9, Mr. SOUTHEE said he considered it most important that the College, which had always taken a most active part in the question of registration, should assert its right to direct representation on the proposed Registration Council.

Mr. BARROW RULE said he had much pleasure in supporting the Council in this matter. He looked back over a long period of time—some forty-eight years—when, at a special meeting convened for the express purpose, he himself had the honour of proposing that an attempt should be made to secure the passing of an Act of Parliament for the registration of teachers, analogous to that for

the registration of members of the medical profession, and the establishment of a Council for Registration analogous to the Medical Council. The College of Preceptors worked diligently, and the Scholastic Education Association, its ally, had also worked diligently, and now they were witnessing some fruit of their labours. Nine separate Bills for the registration of teachers had been introduced into Parliament, four of them promoted by this College. He wished to emphasize the point that in all these Bills it was proposed that the College should be directly represented on the Registration Council. The College had now been at work for sixty-two years, and had been the pioneer in every movement for the advancement of education and the improvement of the status of the teacher. They were the first to establish examinations of teachers and of pupils in secondary schools and to provide means for the training of teachers in such schools. They had pursued their work unremittingly; they had been faithful to the terms of their Charter, and it could hardly be questioned that there was no institution in the country more worthy of representation on any Council that might be formed to carry out the registration of teachers. The Medical Council consisted of 34 members—5 nominated by the Crown, 15 representing the Universities, 9 the professional bodies, while 5 represented registered practitioners. Thus, 26 per cent. of the members of the Medical Council were representatives of professional bodies. He thought they ought still to adhere to the principle laid down in the constitution of the Medical Registration Council, and not hesitate to demand that the College should be adequately represented on the Council to be formed under the Act of last year. There were, of course, many other educational associations in the country, and they wished them all success; but they were all of them but mushroom institutions compared with the College of Preceptors. It might be confidently affirmed that not one of them, nor all of them together, had done as much to advance the cause of education and the interests of the profession as the College of Preceptors had done. He would conclude his remarks by reading an extract from an official, historical, and authoritative document:—"The movement for the registration of teachers first arose within the teaching profession itself, with the aim of protecting the public from the incompetent teacher and thereby promoting the interests of the competent. The aim which formed the *raison d'être* of the College of Preceptors finds distinct expression in the first resolution adopted on the establishment of the College in the year 1846." The Charter was obtained in 1849, and the resolution referred to was as follows:—"That, in the opinion of this meeting, it is desirable for the protection of the interests both of the scholastic profession and the public that some proof of qualification, both as to the amount of knowledge and the power of conveying it to others, should be required, from and after a certain time to be hereafter specified, of persons who may be desirous of entering the profession." In that resolution they had a strong and good foundation, for, although the word "registration" was not actually used in the resolution, a register was undoubtedly pointed at, and the subsequent formation of the "Scholastic Registration Association Alliance," affiliated to the College of Preceptors, only made explicit a proposal which had been always implied. From 1860 onwards the formation of a Teachers' Register was persistently advocated by the College as a means of protecting the public and raising the qualifications of the teachers both in knowledge and in technical skill, and forming them into a compact and influential profession.

Mr. EVE said they had been very much interested in hearing Mr. Barrow Rule's account of a movement in which he had taken so large a part. The statement in the report was simply a statement of pious opinion, and what was wanted was that a memorial should be drawn up by the Council to be sent in to the Board of Education in that sense, and if the report were adopted it would strengthen the hands of the Council. It was fair to say that they were not singular in this matter. The College had representatives on the Federal Council, and the Federal Council had drawn up a scheme, which, however, the representatives of the College thought somewhat too elaborate, for the representation of the profession on the future Registration Council. He understood that a meeting was to be convened at which certain bodies would be represented—viz., the Federal Council, the Associations of Technological Institutes, the National Union of Teachers, and others—to endeavour to come to an agreement as to the kind of Council that should be constituted. The conference would be without authority, but probably its deliberations would influence the authorities who would have to settle the question. He thought they could not be wrong if, on behalf of the College

of Preceptors alone, they were to present from the Council a memorial in the sense indicated.

Mr. RADFORD thought they ought to bear in mind that this matter did not come within the scope of the report that was before them, and that it ought rather to be dealt with separately. But, assuming that the College were to be represented on the proposed Registration Council, the question for them to consider was the more practical one of the policy their representative should advocate when the conditions of registration came to be considered by that Council. If the Register was not to be a class Register, but to comprise all competent teachers, whether with or without University degrees, the College ought to insist that the conditions of registration should be such as would provide for the inclusion of such teachers. The College was founded in order to help such teachers forward, and as a member of the College he wanted to know what his representative was going to do for them. He trusted that he would not merely sit still and allow himself to be overborne by the majority of representatives of conflicting interests on such a Council as was suggested.

Mr. STORR thought the last speaker had not noticed the open door. All teachers were to be classified in alphabetical order in one column. What did he want more? That was the contention which he himself had always been fighting for. Perhaps the Dean, as one of their representatives on the Federal Council, would tell them what action that body had already taken. They were informed at the meeting of the Head Masters' Association that certain resolutions had been passed. He did not imagine that these resolutions were in any way confidential, and they would be a guide as to their future action. He did not think it would need any special advocacy to make certain that the College of Preceptors would be represented on the new Registration Council.

The DEAN, replying as to what had been done by the Federal Council, said the Council at their last meeting drew up a scheme for the constitution of the Registration Council. According to that scheme, it was to consist of thirty-six members, one-fourth to be nominated by the bodies forming the Federal Council, one-fourth by the Technological Branch, one-fourth by the Elementary Branch, and one-fourth by the Crown. It so happened that the representatives of the College of Preceptors voted against this particular motion, because they thought it was too elaborate and too much in detail to submit to the Government. They thought it would be better to lay down something on more general lines; but they were, on the whole, in harmony with the desire to press the Government to provide for a pretty wide representation of secondary teachers.

In reply to Mr. KAHN, the DEAN stated that the Council had not as yet considered what should be the qualifications for registration.

The Report of the Council was then adopted.

The DEAN then presented his Report, which had been printed and circulated among the members attending the meeting. It was as follows:—

#### THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Christmas Examination of candidates for Certificates took place on the 3rd to the 7th of December at 191 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Aldershot, Ashton-in-Makerfield, Aylesbury, Bamford, Bangor, Bath, Beckington, Bewdley, Bideford, Biggleswade, Birmingham, Blackpool, Bognor, Bournemouth, Braunton, Brentwood, Brighton, Bristol, Cardiff, Carlisle, Carmarthen, Cheltenham, Cheadle Hulme, Chopstow, Chiswick, Clapham, Coleford, Congleton, Cork, Cowes, Crewe, Croydon, Devizes, Doncaster, Dublin, Durham, Ealing, Eastbourne, Edinburgh, Exeter, Fakenham, Fareham, Farnworth, Folkestone, Fraserburgh, Frome, Grantham, Gravesend, Harlow, Harrogate, Hastings, Hayle, Herne Bay, Hereford, Holsworthy, Huddersfield, Hulme, Hutton (Preston), Inverurie, Jersey, King's Lynn, Kirkby Stephen, Leeds, Lincoln, Liskeard, Liverpool, Llandudno, London, Longton, Lytham, Maidstone, Malton, Manchester, Margate, Market Drayton, Morecambe, Newcastle-on-Tyne, Newport (Mon.), Newton Abbot, Northampton, Norwich, Nottingham, Ongar, Penketh, Peterborough, Plymouth, Portsea, Portsmouth, Reading, Redditch, Richmond-on-Thames, Ripley (Surrey), Saham, St. Annes, St. Leonards-on-Sea, Sale, Sandwich, Scarborough, Selby, Sevenoaks, Sheffield, Shirley, Shoreham, Southampton, Southend, South Molton, Southport, Southsea, Spalding, Stamford (Lincs), Stokesley, Sunderland, Swindon, Taplow, Taunton, Thrapston, Tor-

quay, Towcester, Tuxford, Walton (Liverpool), Wellington (Salop), West Norwood, Weston-super-Mare, Weymouth, Whalley, Whitchurch (Salop), Wimbledon, Winchester, Winslow, Wisbech, Woodford, Workington, Worthing, Yarmouth, and York. The Examination was also held at Batticaloa and Colombo (Ceylon); Stewart Town (Jamaica); Georgetown and New Amsterdam (British Guiana); St. George's (Grenada); St. Lucia and St. Vincent (B.W.I.); Nassau (Bahamas); Port of Spain (Trinidad); Bulawayo, Cala, Grahams-town, Irene, Johannesburg, Klerksdorp, Ladysmith, Oakford, Port Elizabeth, Potchefstroom, Pretoria, Queenstown, Uitenhage, Um-tata, and Umzinto (South Africa); Freetown (Sierra Leone); Lagos; Rangoon (Burma); Allahabad (India); and Lomas de Zamora (Argentine Republic).

The total number of candidates examined (not including 554 examined at Colonial and Foreign Centres) was 4,871, of whom 3,438 were boys and 1,433 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined for Certificates during the year (not including those who attended the Supplementary Examinations in March and September) was 9,704.

The following table shows the proportion of the candidates at the recent Examination who passed in the class for which they were entered:—

	Entered.	Passed.	Percentage.
First Class (or Senior).....	437 ...	236 ...	54
Second Class (or Junior).....	1,952 ...	1,088 ...	56
Third Class .....	2,102 ...	1,663 ...	79

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (380 in number) who entered only for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination (not including 294 examined at Colonial and Foreign Centres) was 1,692—1,008 boys and 684 girls. Of these 1,492 passed, or 88 per cent.

At the Supplementary Examination for First and Second Class Certificates, which was held on the 3rd to 5th of September in London and at the following Provincial Centres, viz., Birmingham, Bristol, Leeds, Liverpool, and Manchester, 212 candidates presented themselves. The number of candidates examined at these Supplementary Examinations during the year was 520.

The Summer Examination of Teachers for the College Diplomas took place on the 26th of August and five following days in London and at the following Local Centres:—Birmingham, Blackburn, Bristol, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Plymouth, Stornoway; and at Bombay and Bhusawal (India); and Berbice (British Guiana). It was attended by 336 candidates—198 men and 138 women. On the results of this Examination, 28 candidates obtained the Diploma of Licentiate and 97 that of Associate.

The Christmas Examination of Teachers for the College Diplomas took place on the 30th of December and five following days in London and at the following Local Centres:—Banchory, Birmingham, Bristol, Dublin, Edinburgh, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Plymouth; and at Calcutta, Lucknow, and Rawal Pindi (India); and Anking (China). It was attended by 514 candidates—316 men and 198 women.

Practical Examinations to test Ability to Teach were held in February, May, and October. At these Examinations 15 candidates presented themselves, and 13 obtained Certificates.

The number of schools examined and inspected during the year under the Visiting Examination and Inspection Schemes (A), (B), and (C) was 8.

The Report was adopted.

The meeting then proceeded to the election of twelve members of the Council to fill the places of the twelve retiring by rotation, and three auditors.

The Chairman having appointed Mr. CHANDLER and Mr. RINGWAY to act as scrutators, the voting papers were distributed and the election was proceeded with. On the scrutators presenting their report, the following were declared to be duly elected:—

#### MEMBERS OF THE COUNCIL.

Rev. Canon Bell, M.A., F.C.P., 19 Cowley Street, S.W.

Rev. A. W. Boulden, M.A., L.C.P., Christ Church Vicarage, Erith, Kent.

W. Campbell Brown, M.A., F.C.P., Tollington School, Muswell Hill, N.

R. F. Charles, M.A., 12 St. Albans Villas, Highgate Road, N.W.

Miss M. Crookshank, L.L.A., 36 Granada Road, Southsea.

R. Howe, High School for Boys, Croydon.

Miss S. Jebb, 9 Clyde Road, St. Leonards-on-Sea.

Miss F. Lawford, Camden School for Girls, Prince of Wales Road, N.W.

Prof. L. W. Lyde, M.A., F.R.G.S., Manor House, Hayes, Middlesex.

A. Milne, B.A., University School, Hastings.

Barrow Rule, F.C.P., Glion, Moreton Road, Croydon.

J. Walmsley, B.A., Grammar School, Eccles, Manchester.

#### AUDITORS.

J. Bell, LL.D., M.A., 4 Beatrice Avenue, Norbury, S.W.

H. Chettle, M.A., Stationers' School, Hornsey, N.

A. E. C. Dickinson, M.A., LL.D., L.C.P., Grove House, Highgate.

The DEAN said he now rose to discharge what was ordinarily regarded as a mere matter of routine at the end of one of these meetings, viz., to propose a vote of thanks to the Chairman. Dr. Wormell's term of office as President had now come to an end by his own wish, though as a past President he would still be eligible to preside if necessary. In 1879 Dr. Wormell was elected a Vice-President of the Council, and from that time to this he had presided over nearly all the half-yearly general meetings, and those who had been present at some of them would know that this was sometimes by no means an easy task; but whether the work was rough or smooth, there could be but one opinion, that Dr. Wormell had carried it through with unflinching good temper, and had won the confidence of every member of the College.

Mr. BARROW RULE, speaking in support of the proposal, said he had been a member of the College since 1859, and he could affirm that the meetings of the present day, notwithstanding their occasional animation, were very different from those of earlier years. As a member of the Council since 1863 he had had an opportunity of watching what took place there, and no Council, he was sure, had its business conducted in a more courteous, orderly, and gentlemanly manner. He also spoke with affectionate regret of those who had passed away or whom increasing infirmity of health had compelled to retire from active work for the College.

Dr. WORMELL, in acknowledging the compliment, said there were two reasons which had led him to decide to retire. It was not desirable that the President should be re-elected as a matter of course for a long series of years, and, as Mr. Barrow Rule suggested, there came a time when nature reminded those holding responsible positions that it was right for them to withdraw. He remembered well the character of some of the meetings referred to by Mr. Barrow Rule, when it was not an unusual thing for a member to stand up and declare that he defied the authority of the Chair. There were great fights over and over again, and he remembered on one occasion being in the chair for five hours continuously. He had always held it to be the Chairman's duty on these occasions to be strictly impartial. He would always cherish the most pleasant remembrances of the College of Preceptors, having learned in the College how many men there are with a large capacity for friendship.

The vote of thanks was passed by acclamation, and the proceedings terminated.

In the evening fifty members and friends of the College dined together at the Gaiety Restaurant, under the presidency of Dr. Wormell. The company included Prof. Adamson, Miss Allworthy, Mr. Barlet, Rev. J. B. Blomfield, Sir William Bousfield, Mr. and Mrs. Campbell Brown, Mr. E. A. Butler, Mr. Chalmers, Mr. and Miss Charles, Rev. A. J. Church, Dr., Mrs. and Misses Dickinson, Mr. and Mrs. Eve, Miss Gavin, Mr. and Mrs. Harris, Miss E. M. Harrison, Mr. Hawe, Mr. and Miss Hodgson, Mr. T. T. Hodgson, Mr. Kelland, Mr. and Mrs. Longsdon, Sir Philip Magnus, M.P., Dr., Mrs. and Miss Maples, Mr. Mardling, Dr. Marx, Mr. Mathieson, Dr. and Mrs. Moody, Mr. Morshead, Mr. Nicol, Mr. Ruf, Mr. C. G. Sadler, Mr. Barrow Rule, Dr. Armitage Smith, Captain Speeding, Mr. Starbuck, Mr. White, Mr. Eric Williams, and Mr. Wilson. Sir Philip Magnus proposed the toast of "The College of Preceptors," which was responded to by the Chairman; and Mr. Eve proposed the toast of "The Visitors," which was responded to by Sir William Bousfield. Songs were given during the evening by Miss Elsie Dickinson, Miss Hodgson, and Mr. Sadler, and recitations by Mr. Eric Williams.

MESSRS. CASSELL are publishing a new Nature Reader by Richard Kearton, F.Z.S.—"The Fairyland of Living Things," with illustrations from photographs taken direct from wild, free Nature by Cherry Kearton.

## CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS EN ANGLETERRE.

### LES MÉTAMORPHOSES DE PARIS.

Par M. G. COUILLAULT.

Le 30 novembre dernier, M. G. Couillaault a fait une conférence sur Paris. L'histoire de Paris (nous dit le conférencier) présente des phases uniques dans l'histoire des grandes villes. Paris a connu les plus grands malheurs; il a connu aussi les plus grandes joies. A toutes les périodes de son histoire, Paris a joué un rôle héroïque.

Vers l'an 350 avant Jésus-Christ, quelques familles nomades fuyant la persécution, la misère, plantèrent leurs tentes sur la rive gauche de la Seine, alors un fleuve large et profond s'épandant sur ses deux rives et y formant des marécages. Le site enchanteur que présentait le bassin de la Seine attira ces premiers habitants qui, craignant d'être attaqués, s'établirent sur le plus grand des sept îlots que la Seine baignait alors et qui aujourd'hui n'en forment plus que deux—l'île de la Cité et l'île Saint-Louis. Ces îlots étaient boisés. Les deux rives de la Seine étaient couvertes de forêts et de pâturages. Les Sénonais appelèrent ces nomades, descendant de peuplades belges, Parises, et ceux-ci donnèrent à leur campement le nom de Lutèce ou île des corbeaux. Les mœurs des Parises étaient douces. Ils jouissaient des bienfaits de la paix depuis 300 ans quand parut le premier ennemi de Lutèce, Jules César. Une race de pasteurs et de pêcheurs n'était pas capable de lutter contre des guerriers de profession; la bourgade fut conquise et ses habitants passèrent sous le joug des Romains. Ceci se passait vers l'an 54 avant Jésus-Christ. Les Parises avaient emprunté aux Gaulois, leurs voisins, leur religion, leurs mœurs, leurs us et coutumes; ils empruntèrent aux Romains leurs arts et leur civilisation.

Plusieurs empereurs romains firent de Lutèce leur séjour favori. Constance Chlore fit construire le Palais des Thermes, qui fut le premier monument important de Lutèce. Sous l'empereur Julien, la population s'élevait à 12,000 habitants. L'île de la Cité n'était défendue que par le cours de la Seine et quelques tours de bois. La plupart des maisons étaient en bois et, à plusieurs reprises, la ville naissante fut détruite par des incendies. La première enceinte fortifiée ne fut construite que vers le cinquième siècle par les Romains pour protéger la ville contre toute invasion.

Dès le troisième siècle, Saint-Denis avait transformé la ville païenne en ville chrétienne. L'église Saint-Etienne fut érigée sur l'emplacement occupé actuellement par Notre-Dame. Un nouvel ennemi mit la ville en danger—Attila, vomi par l'Asie, ravagea l'Europe et menaça Lutèce, une simple gardeuse de moutons, Geneviève, animée de l'amour de la patrie et d'un saint zèle, sauva la ville. Les habitants reconnaissants la prirent pour patronne. L'abbaye Saint-Germain-des-Près date du règne de Childébert. A part les ruines romaines, tous les monuments de Paris sont postérieurs au douzième siècle. Clovis fit de Lutèce sa capitale. Charlemagne préféra le séjour d'Aix-la-Chapelle à celui de Lutèce, qui sous ses successeurs cessa d'être capitale et redevint simple bourgade. Sous le comte Eudes la ville devint plus importante; les comtes de Paris habitaient une tour fortifiée sur l'emplacement occupé par le Palais de Justice.

Le neuvième siècle vit de nouveaux malheurs fondre sur la ville—les Normands s'emparèrent trois fois de Lutèce et la pillèrent; mais en 885, après un siège mémorable qui dura treize mois, les Normands furent repoussés. En l'an 978, Paris eut un autre ennemi à combattre, l'empereur Othon, qui s'avança sous ses murs, mais dut fuir à la hâte poursuivi par Hugues Capet.

La municipalité parisienne fut définitivement constituée sous Louis le Gros. Les *navtes*, ou marchands de l'eau, avaient le monopole de la navigation de la Seine, moyennant certaines redevances au roi. Sous Philippe Auguste la capitale prit un grand développement et s'appela définitivement Paris. La ville fut entourée d'une forte muraille et de 68 tours. Au moyen-âge, la ville était divisée en trois parties distinctes: (1) la Cité, dans l'île du même nom; (2) l'Université, sur la rive gauche; et (3) la Ville, sur la rive droite.

L'Université fut fondée sous Louis IX; elle jouissait de grands privilèges. Les jeunes gens de tous les pays tenaient à honneur d'y venir faire leurs études. Les examens de cette époque étaient difficiles. Le *trivium* comprenait la grammaire, la logique et la rhétorique; le *quadrivium*, l'arithmétique, l'astronomie, la géométrie et la musique. Pour devenir docteur en Sorbonne, il fallait, de 6 heures du matin à 7 heures du soir, sans boire, ni manger, et sans quitter la chaire, répondre avec succès à toutes

les questions posées, après dix ans d'études. L'Université s'appela d'abord *pauvre maison*, parce qu'elle abritait les basochiens qui étaient pauvres et sortaient de la classe des *vilains*. La promenade favorite des étudiants était le Pré-aux-Clercs. Les commerçants se réunissaient sur la place de Grève, où ils discutaient leurs affaires, ce qui a donné naissance à l'expression *faire la grève*. Les armoiries de la ville de Paris sont fort anciennes; les détails en ont été modifiés, mais on y voit toujours figurer le vaisseau équipé des *Nautes* et la fière devise latine: *Fluctuat nec mergitur*. Les couleurs de la ville de Paris sont le rouge et le bleu, La Fayette y ajouta le blanc, l'emblème royal, et en forma le tricolore. Notre-Dame est probablement le plus beau monument que le génie de l'homme ait conçu: il date de 1163.

L'Hôtel-Dieu a remplacé la *maison des pauvres*, fondée au septième siècle par St Landri. Le Louvre, qui renferme nos trésors nationaux, fut bâti par Philippe Auguste; c'était un groupe de murs épais flanqués de 14 tours. François Ier fit raser le château féodal et le remplaça par un palais dont l'ensemble constitue une merveille d'architecture. La Bastille, qui a joué un rôle si sinistre dans l'histoire, fut construite en 1370 et prise et rasée en 1789. Les rues de Paris portent le nom de grands hommes qui ont illustré la France, de victoires, de villes, de corporations et de faits qui s'y sont passés. On a donné aux églises le nom de saints dont elles possèdent des reliques.

L'histoire de Paris comprend les plus belles et les plus terribles pages de notre histoire. La capitale fut assagée, prise, incendiée, décimée par la maladie, la peste, la misère, la famine. Les diverses factions s'y entretinrent à maintes reprises. Elle fut occupée par les Anglais de 1420 à 1436, par les Alliés en 1814 et, en partie, par les Allemands en 1871. Les premiers canons qui furent placés sur ses remparts servirent aux Anglais à repousser les troupes de Charles VII. La première maison où se réunit la municipalité était située près du Panthéon, monument relativement moderne où reposent les cendres de quelques-uns des hommes illustres de la France. La Conciergerie date de 1418. C'est une sombre histoire que celle de ce monument; sa crypte a vu les scènes de torture les plus horribles; on y *questionnait* les prisonniers et prisonnières à l'aide de tenailles, de scies, de marteaux, d'entonnoirs, de brodequins, de chevalets, de roues, etc. Le Jardin des plantes fut créé par le médecin de Louis XIII. Les Invalides sont l'œuvre de trois grands monarques—Henri IV, Louis XIV et Napoléon Ier.

Sous Louis XIV, Paris s'embellit considérablement et un grand nombre de monuments féodaux disparurent. Les Cours des Miracles, qui ont fait le bonheur des romanciers de toutes les époques et dont la description est au-dessous de la vérité, furent supprimés à la même époque. On les appelait ainsi parce que c'était miracle d'y voir hommes, femmes, enfants y pénétrer en guenilles, aveugles, boiteux, bossus, perclus et en sortir parfaits de corps et d'habits. Le Paris moderne est l'œuvre de Napoléon III. Le baron Haussmann fut le génie transformateur de la ville: ses avenues, ses boulevards furent agrandis, les abords de ses monuments furent dégagés. Sous la IIIe République les embellissements de Paris se sont continués. La grande muraille qui entoure la capitale et qui a fait dire à Victor Hugo: "Le mur murant Paris rend Paris murmurant," a coûté 500,000,000 de francs.

Les principaux monuments de la capitale comprennent les églises, les palais, les musées, l'université et les écoles: c'est le patrimoine béni de la France et de l'étranger, car Paris appelle à lui l'humanité entière, avide de liberté et d'instruction. Les cimetières, les catacombes, les halles et marchés, les jardins, les parcs, les industries nationales sont intéressants à visiter. Si l'on veut se rendre compte de la grandeur, de la beauté de la capitale, qu'on se transporte par une belle matinée d'été sur la terrasse de Saint-Cloud et l'on verra se dérouler devant soi le magnifique panorama de la ville lumière avec ses dômes dorés, ses clochers élégants, ses campaniles multiples.

La vie parisienne présente des phases nombreuses et variées; elle convient à tous les goûts et peut les satisfaire. Paris est devenu le centre intellectuel du monde. Ce ne sont pas seulement les monuments qui se transforment, mais encore les mœurs des habitants. Les chercheurs qui veulent se rendre compte des métamorphoses de Paris, des mœurs de ses habitants, de leurs us et coutumes aux différentes époques de son histoire, doivent visiter le musée Carnavalet et y consulter la magnifique bibliothèque de 70,000 volumes, dans lesquels ils trouveront les détails les plus circonstanciés sur les événements qui se sont déroulés dans Paris depuis les premières migrations jusqu'à nos jours.

## REVIEWS.

## A COMPREHENSIVE HISTORY.

*The Historians' History of the World.* Edited by Henry Smith Williams, LL.D., with the collaboration of many specialists and with contributions by more than thirty living historical scholars. Vols. I. to XII., and XXV. (7s. 6d. each. London: the Times.)

Here is an enterprise of a very remarkable character: "a comprehensive narrative of the rise and development of nations as recorded by the great writers of all ages," digested into two dozen volumes (with an index volume), containing some 17,000 pages and over 3,000 illustrations, and, in sheer bulk, claiming to rank among the half-dozen largest books in existence. The scope of the subject necessarily requires a large space for anything like adequate treatment, and mere bigness gives value to the work only in so far as the quality maintains the modern standard of historical narrative. A reasonably extended test of the first half of the work now before us is very reassuring; the results fairly justify the anticipations suggested by the sources admittedly drawn upon and by the names of the scholars that have furnished contributions. The subjects are handled in tolerably just proportion as well as in ample variety. The work, as is stated in an elaborate accompanying booklet of explanation, "is a book of heroes, a record of wars and conquests; but it is also a record of peoples and governments, a story of the growth of civilization—it is as broad, as varied, as life itself." The get-up is in every way substantial, and the price is strikingly suggestive.

The first volume contains the history of Egypt to the Thirty-first Dynasty, and of Babylonia and Assyria to the fall of Babylon, with a very interesting introduction by the editor (especially interesting where he describes the method of procedure in the compilation of the work), a glimpse into the Prehistoric Period, and a chart of Human Progress (by Mr. Mackinder). The second volume gives the history of Israel, Phœnicia, the minor kingdoms of Western Asia, ancient India, and ancient Persia. The third and fourth volumes are occupied with the history of Greece; the fifth, sixth, and seventh with the history of Rome. The eighth is divided between the Parthians, Sassanids, and Arabs on the one hand, and the Crusades and the Papacy (together with a chapter on Feudalism) on the other. The ninth treats of mediæval and modern Italy, from A.D. 476 to the present time; the tenth, of Spain and Portugal; and the eleventh and twelfth bring the history of France down to the abdication of Napoleon (1815). Prefixed to each large division is a concise, but important, article on some relative topic by an acknowledged master in the particular department of historical scholarship; appendixes of considerable extent deal with outstanding matters that are more conveniently exhibited apart; and there are select bibliographies and biographical notices of historical writers. The index volume is very full; besides an extremely comprehensive general index, it furnishes also a bibliographical index, naming all the authors contributing, quoted, or used as authority for editorial statements, with explicit reference to their works and to their contributions to this history. The chronological summaries following the history of each separate country will be found exceedingly useful.

Why the apparently tautological title, "The Historians' History"? "The name is intended to express very clearly the editorial sense of indebtedness to a host of historians, living and dead." The fact is that the writings of all the best historians in all the languages have been freely adopted as the raw material to be worked up or digested. "At any given point so much is taken verbatim from some unquestionable authority as fits in with the trend of the story and carries it on—just so much and not any more. Then the editors take up the story in their own words, and, a little later, a convenient and approved authority, the same or another, again states in his own language the best that can be said at that particular point." The editors skim the cream of the world's historical literature. "The statement that about eight thousand separate historical works—comprising perhaps thirty thousand volumes, in many languages—were carefully examined and discussed with regard to their probable usefulness to the 'Historians' History' conveys a more or less definite sense of the work accomplished. The same idea is emphasized by the fact that specific citations from these works were selected, analysed, and criticized to the extent of perhaps ten or twelve times the bulk of matter that ultimately went to the making of the entire twenty-five volumes of the 'Historians' History'."

History." "As a practical illustration of the attention paid to details," says the editor, "it may be mentioned that of the many hundreds of translations made from divers languages for use in the 'Historians' History' scarcely one is presented precisely as it came from the hands of the first translator. It was the uniform custom to have a second translator go over each manuscript quite independently, comparing it with the original. In any case that presented peculiar difficulties a third expert made yet another independent comparison; after which the style of the translation was polished—with the most careful regard to the retention of its original meanings—by literary critics." All such excerpts are woven into the text of the consecutive story of world history.

We quote further what the editor says about "the ruling motives which have dominated the conception" of the work. "These ruling motives," he says, "are two. First, the hope of attaining a high standard of historical accuracy in the most critical acceptance of the term; secondly, the desire to retain as much as possible of human interest in the broadest and best sense of the words. To attain the first of these ends it is necessary to be free from prejudice, to have unflinching zeal in collecting testimony, to have scientific and critical acumen in weighing evidence; to attain the second end it is essential that kindred faculties should be applied not only to the facts of history, but to the literary presentation of these facts, that the good and true story may not be spoiled in the telling. The desire to be free from all prejudice in the judgment of historical facts is, then, the key-note of all our philosophy of historical criticism, and the desire to retain interest—human interest—is the key-note of our philosophy of historical composition. To attain either end, what perhaps is most required is catholicity of sympathies. . . . In a word, there must be freedom from prejudice in every field—except, indeed, that prejudice in favour of the broad principles of right, regarding which all civilized nations of every age have been in virtual agreement."

Given the general conception, the work has been executed with conspicuous ability. At the same time, it is to be observed that the conception does not embrace inquiry into the archives of history, to bring forth fresh views that have not already found their expression in print; and, indeed, we can by no means agree with the editor's grudging estimate of the value of specialist research in these latter times. At points, too, one cannot but question the validity of transcripts from volumes that had well merited fame in their day, and that not always a remote day. But in view of the general excellence of the enormous mass of matter comprised in these volumes, one is rather inclined to lay stress on the positive merits of the performance. The work will at least bring the general reader down to a much later date than he has been accustomed to, and the style of the book will probably attract his interest to a wider, and perhaps a deeper, study. Indeed, for all but specialists the narrative will prove highly instructive. The thought and labour expended upon the work, to say nothing of the enormous cost of production, undoubtedly deserve a liberal recognition.

#### THE CAMBRIDGE ENGLISH LITERATURE.

*The Cambridge History of English Literature.* Edited by A. W. Ward, Litt.D., F.B.A., Master of Peterhouse, and A. R. Waller, M.A., Peterhouse. Vol. I., *From the Beginnings to the Cycles of Romance.* (9s. net (buckram). Cambridge University Press.)

The first volume of another great literary enterprise of the Cambridge University Press gives large promise of another great success. The scale is ample: the present instalment brings us down to the fourteenth century; it will take another to see us clear of the Middle Ages; and there will be a dozen more volumes to follow. The writers have been selected from specialists at home and abroad, and the lines have been laid down for them by the accomplished editors. The aim is to give a connected account of the successive movements of English literature, both main and subsidiary, secondary writers as well as principal authors receiving appropriate treatment, and the action and reaction between English and foreign literatures being adequately signalized. As in the case of the "History," sufficient bibliographies are to be furnished, with critical hints for the student. The editors have had the good sense and the courage to clear the decks for fresh and independent investigation, so that the story may unfold itself "unfettered by any preconceived notions of artificial eras or controlling dates." Hence it may happen "that some of the subjects which may seem

to have been omitted may prove to have been deliberately reserved for later treatment." "Thus, the editors have thought it simpler to defer an inquiry into the first glimmerings of the English drama and an account of the miracle plays until the close of the second volume, and to deal, on broad lines, with the progress of the English language as the vehicle of English literature, with changes in English prosody, and with the work of Universities and scholarship, towards the end of successive periods, rather than piecemeal at successive stages of each." Allied subjects that are more or less interwoven with literature pure and proper will be handled in due proportion:

Such are the literature of science and philosophy, and that of politics and economics; parliamentary eloquence, the work of schools and Universities and libraries, scholarship, the pamphlet literature of religious and political controversy, the newspaper and the magazine, the labours of the press and the services of booksellers, homely books dealing with precept and manners and social life, domestic letters and street songs, accounts of travel and records of sport—the whole range of letters, in its widest acceptation, from the "Cambridge Platonists" to the "fraternity of vagabonds." And, since the literatures of the British Colonies and of the United States are in the main the literature of the Mother-country produced under other skies, it is intended to give in their proper place some account of these literatures also.

The treatment, then, is to be on the largest scale—a scale hitherto unattempted; and it is to be executed by some of the best equipped and most capable of modern literary critics.

The first volume makes an excellent start. Though a considerable proportion of the contributors are but little known to fame, and in some cases betray lack of familiarity with original documents, they nevertheless, on the whole, justify their selection; and it is but seldom that the well known experts have neglected to bring their knowledge up to the standard of the latest scholarship. A sober level style prevails, suitable to the general reader and usually satisfying to the more exacting stylist; yet there are occasional instances where excellent matter is somewhat loosely presented. Knowledge and style do not always keep company, and experts are an *irritabile genus*, we know; but we should encourage the editors to exercise their just authority at all hazards. Down to the end of the fourteenth century English literature is embodied in runes—we may say runes—Latin, Anglo-Norman, and Welsh, as well as in English. Miss Anna C. Puaes, Ph.D. Upsala, tells us something about runes. The Latin writings are capably discussed in three chapters, and the Welsh writings are skimmed, but there is not a little Anglo-Norman literature, fairly claimable as English, that has been omitted—or shall we say postponed? There is occasional overlapping, perhaps not always readily avoidable; but there seems to have been some unfortunate confusion of a major character in the treatment of the Metrical Romances in chapters xiii. and xiv. In chapter xiii. Prof. Ker handles the subject in his usual masterly fashion, with profound knowledge, insight, and precision; and in chapter xiv. Mr. J. W. H. Atkins takes another turn at the subject, amplifying Prof. Ker's exposition at points, putting forward some divergent opinions, and, of course, extending the scope of the treatment. Why Prof. Ker should be supplemented by Mr. Atkins is not in the least intelligible. However, the general impression remains that the work has been very capably accomplished, and that it presents a comprehensive, fresh, and most instructive survey of the literature in the earlier periods. The final chapters deal with the prosody of Old and Middle English (Prof. Saintsbury), changes in the language to the days of Chaucer (an extremely able sketch by Mr. Henry Bradley), and the Anglo-French language (a reprint of a paper by the late Prof. Maitland). The select bibliography and the index are very full and most serviceable.

## GENERAL NOTICES.

### CLASSICS.

*A Book of Greek Verse.* By Walter Headlam, Litt.D., Fellow of King's College, Cambridge. (6s. net. Cambridge University Press.)

Dr. Headlam translates a considerable number of representative specimens of Greek poetry from the earliest surviving lyric of the seventh century B.C. down to its latest accents in the sixth century A.D., and intersperses translations into Greek of more or less allied passages from English and other modern languages. Half-a-dozen choral lyrics selected from Aeschylus and Sophocles, and "The Magic Wheel" and "Harvest Home" of Theocritus, are extended and conspicuously successful tests of his skill and taste in rendering the Greek into

(Continued on page 76.)

# DENT'S MODERN LANGUAGE SERIES.

Edited by WALTER RIPPMMANN, M.A.

## FRENCH SECTION.

**Dent's New First French Book.** By S. ALGE and WALTER RIPPMMANN. *Nineteenth Edition.* Extra fcap. 8vo, **2s.**

"We know of no better book to start French on."—*Journal of Education.* The Phonetic Part of the "First French Book" is also issued separately at **6d.**

**Supplementary Exercises to Dent's First French Book.** By H. C. NORMAN, B.A. Price **6d.**

**Hints on Teaching French.** With a Running Commentary to "Dent's New First French Book" and "Second French Book." By WALTER RIPPMMANN. *Fourth Edition, Enlarged and Revised.* Extra fcap. 8vo, **1s. 6d.** net.

**Dent's Wall Pictures of the Four Seasons.** From Drawings specially prepared by J. A. SYMINGTON. Printed in Colours. Size 55 by 35 inches. Unmounted, **2s. 6d.** net each; Mounted on Linen and Eye-letted, **3s. 6d.** net each; Mounted on Linen, with Rollers, **6s.** net each.

**Dent's New Second French Book.** By S. ALGE and WALTER RIPPMMANN. *Seventh Edition (completing 38,000 copies).* Extra fcap. 8vo, **2s.**

**Première Grammaire Française.** By H. E. BERTHON. *Fourth Edition, Revised.* Extra fcap. 8vo, **2s.**

Will be found to contain all that pupils are likely to require during the first three or four years of teaching. It is entirely written in French, and is already recognized as the standard "reform" French Grammar.

## GERMAN BOOKS.

**Dent's New First German Book.** By WALTER RIPPMMANN, S. ALGE, and S. HAMBURGER. *Eighth (English) Edition.* Extra fcap. 8vo, **2s. 6d.**

**Dent's First German Book.** (Based on the Hölzel Pictures of the Four Seasons.) By S. ALGE, S. HAMBURGER, and WALTER RIPPMMANN. Extra fcap. 8vo, **2s. 6d.**

"An excellent book . . . will be found well worth introducing into schools."—*Athenæum.*

**Dent's German Reader.** By S. ALGE and WALTER RIPPMMANN. *Fourth Edition.* Extra fcap. 8vo, **3s.**

The same principles underlie the "German Reader" as the "First German Book"; it can, however, quite well be taken with pupils who have not worked through the easier volume.

**Der goldene Vogel, and other Tales.** A Second Year German Reader. Edited by WALTER RIPPMMANN, M.A. Extra fcap. 8vo, **1s. 4d.**

**German Daily Life.** By DR. KRON. *Fourth Edition, Revised.* Extra fcap. 8vo, **2s. 6d.** net.

"Distinctly useful . . . well up to date . . . it will also be useful to the many young people who spend a few months in Germany after leaving school."—*Educational Times.*

**Rippmann's Picture Vocabulary.** French or German. **1s. 4d.** per vol. The First and Second Series of both French and German are now ready.

## NEW SHORT FRENCH READERS. *Ready Shortly.*

Second Year French Readers. Each 48 pages. **4d.** per vol.

*Yvon et Finette. Poucinet.*

Third Year. Each 48 pages. **4d.** per vol.

*Un Episode sous la Terreur. Le Monde où l'on se Bat.*

Fourth Year. Each 64 pages.

**6d.** per vol. *Un Merle Blanc. Télémaque.*

## DENT'S MATHEMATICAL AND SCIENTIFIC SERIES.

Edited by W. J. GREENSTREET, M.A., F.R.A.S., Head Master of the Marling School, Stroud, and Editor of "The Mathematical Gazette."

### LATEST ADDITIONS:

**A FIRST STATICS.** By C. S. JACKSON, M.A., and R. M. MILNE, M.A. With upwards of 200 Diagrams and numerous Examples. Crown 8vo, with or without Answers, **4s. 6d.**

**CARTESIAN PLANE GEOMETRY.** Part I. Analytical Conics. By C. A. SCOTT. **5s.**

*School World* (In "The Most Notable School Books of 1907"):—"The two books above possess so much originality and interest that they should be on the shelves of every teacher on this subject."

**SCHOOL HYGIENE.** By HERBERT JONES, D.P.H. (Camb.), Fellow and Hon. Secretary to the Incorporated Society of Medical Officers of Health; Fellow of the Royal Sanitary Institute, &c. Small crown 8vo, **2s.**

English verse. The shorter pieces, and especially the epigrams, are attempted with varying success, but nearly always with remarkable spirit and resource. The translations into Greek hexameters and tragic verse are nothing less than masterly; and the rendering of Victor Hugo's "Guitare," like the original, might well be claimed by Theocritus himself. The variety of the examples lends a special interest to the collection. A considerable preface deals piquantly with points of theory of translation, on which opinions will differ; but Dr. Headlam is always at least very suggestive. Some fifty pages of notes are appended, full of scholarly interest. The volume will take rank with the very best of its class. It will delight the experts, and it will be most instructive as well as interesting to young students. It will certainly, as Dr. Headlam modestly hopes, "please those who care for poetry, whether they know Greek or not, and at the same time help to give a truer notion of what Greek poetry was like."

*A Syntax of Attic Greek.* By F. E. Thompson, M.A., formerly Scholar Lincoln College, Oxford, and late Assistant Master at Marlborough College. (12s. 6d. Longmans.)

This is a second edition, taking account of the great mass of writings on the subject of Greek philology and syntax that have appeared since the publication of the first edition in 1883. The work "is entirely based on the writer's private study of the Greek authors, modified by deference due to the views of great scholars." It has been rewritten and considerably enlarged. The treatment is thoroughly systematic and lucid, and the illustrations are abundant and pointed. The workmanship is scholarly and sound. Some important discussions are placed in appendixes, and there are ample indexes, Greek and English, as well as a table of references. A thoroughly good book.

*Bell's Concise Latin Course.* Part II. By E. C. Marchant, M.A., Fellow of Lincoln College, Oxford, and S. E. Winbolt, M.A., Assistant Master at Christ's Hospital. (2s. 6d. Bell.)

A brief summary of accidence works in the harder points which were omitted in Part I., and a fuller summary of syntax presents in logical and lucid order the matters of main importance. Then follow 58 Latin exercises, with occasional preparatory explanations, recapitulating the materials of Part I., and 58 English exercises involving the matter of the preceding Latin series in fresh forms. There is a vocabulary for each Latin exercise, so far as needed; and general vocabularies, Latin-English and English-Latin. Long quantities are marked. The two Parts provide work for the first two years' study of Latin. Thoughtfulness, experience, and care have been unsparingly bestowed upon the work, and the interest of the pupil is attracted by the matter and the treatment. An admirable course for beginners.

Mr. Murray publishes *The Year's Work in Classical Studies*, 1907, edited by W. H. D. Rouse, M.A., Litt.D., Head Master of the Perse Grammar School, Cambridge (2s. 6d. net). The field is covered, in nineteen sections, by competent specialists. This is the second annual issue, and we hope the series will be permanent: it furnishes a handy summary of current work, which classical students would now greatly miss.

#### MATHEMATICS.

*Junior Practical Mathematics.* By W. J. Stainer, B.A. Lond. (Complete, 3s.; with Answers, 3s. 6d. Bell.)

The compilation furnishes a large and varied collection of exercises in elementary arithmetic, algebra, and geometry, and is designed for use in classes where the subjects are orally taught. It forms as a whole the practical portion of a junior course in mathematics. Since concurrent study in the various branches is assumed, the author has not arranged the contents with any idea of dictating a special order of work, the best sequence must be decided by the teacher in any individual case. The student may obtain, with or without the answers, either the complete work or its separate parts. The answers also have been brought out by themselves in book form.

*Practical Trigonometry.* By H. C. Playne, M.A., and R. C. Fawdry, M.A. (2s. 6d. Edward Arnold.)

A usefully planned and well executed little volume, dealing with the practical side of elementary trigonometry and giving effect to the modern ideas of reform in mathematical teaching. The book furnishes an excellent first course in the subject. It is refreshing to find the authors not only expressly admitting, but also acting on, the principle that it is well from the beginning to teach so that the foundations of knowledge need not be disturbed later. The volume supplements the treatment of the trigonometry of plane triangles by a brief introduction to the methods of dealing with solid angles and figures. Amongst the examples, there are questions involving equations, familiarity with which will prove valuable to the pupil when he proceeds to the study of more advanced mathematical subjects.

*McDougal's Suggestive Arithmetics.*

A double series—Pupil's and Teacher's Books—each series containing seven volumes in large clear type. Exercises mostly constitute the contents of the pupils' books, but some explanatory text is added. The teacher's volumes reproduce on any left-hand page the exercises on the similarly numbered page of the corresponding scholars' book, whilst on the right-hand side are to be found the answers to the

problems set and a number of supplementary exercises and notes. A large proportion of the problems are of a practical character, and provision is made for practice in measurement. The series will probably prove a valuable one.

*Longmans' "Complete" Arithmetics. Scheme B.* (Without answers, 9d.; with answers, 1s. Longmans.)

Book VIII. makes the series complete, and has been prepared for senior pupils and for the classes of evening schools. It will be valuable principally as supplying a large quantity of material for practice in both oral and written work.

#### FOREIGN COMMERCIAL CORRESPONDENCE.

*First Steps in Commercial French.* By Albert Thouaille, Principal of the Gouin School at Manchester, and E. E. Whitfield, M.A. Oxon., sometime Lecturer at the School of Commerce, University College, Liverpool. (2s. Blackie.)

The sub-title explains the contents as "everyday scenes of business life described in colloquial language, with exercises, letters, synopsis of grammar, and vocabulary." The object is to give the student a mastery of the most essential terms used in commerce, and to enable him to speak the language and to compose business letters in it. The first part deals with matters of business in some seventy lessons, arranged in a certain progressive order, and working in vocabulary and grammar as they proceed. A reading passage sets out the subject of the lesson; next a group of "phrases incidentes" naturally enlarge the scope of the situation; and "exercices" and "grammaire" follow. After a few lessons, a series of questions on the group are introduced, and by-and-by we have "exercices de revision" and "exercices d'application." The second part consists of 13 well-selected "lettres commerciales," with exercises upon each. Then a careful outline of the main points of grammar, and a French-English vocabulary. The work represents a vast amount of labour in selection and in presentation, and, if the methods expounded by the authors be followed, the student cannot but be extremely well grounded in the subject.

*French Commercial Correspondence and Technicalities, &c.* By W. N. Cornett, Foreign Correspondent, Modern Language Master, City of Liverpool Higher Evening Commercial Classes at Central and North Y.M.C.A. Institutes. (2s. net. Hirschfeld.)

The work follows the plan of the author's previous books on Spanish and Portuguese correspondence. The aim is to provide an easy and rapid means of acquiring a good style of correspondence in French, "and with this view short letters only are given, and these well varied and annotated, so that they may be conveniently and profitably used as translation exercises." All the usual business transactions are represented; the letters, forms of accounts, and various commercial documents are framed on models of actual business practice; there are moneys, weights, &c., and an extensive vocabulary of trade products. The book has been compiled with much knowledge and care, and it will be extremely useful as an introduction to the subject.

*German and English Commercial Correspondence for Commercial Colleges.* Compiled by B. Weber, Professor of Economics, Mannheim, and C. Kaiser, Professor at the School of Commerce in Liverpool University. Part I., English. (2s. Nutt.)

This work is part of a German series. The letters and exemplary documents in the various branches of business, are given in English for translation into German, with the aid of an ample "phraseology" provided towards the end of the volume. A good deal of useful information on the subject of each section is prefixed to the formal instruction in technicalities; and numerous exercises of a practical character are proposed. The authors think the book should be worked through in about 80 lessons, "the time usually allowed in German schools of commerce for one year of instruction in English." It is a slim volume, but a good deal may be learned from it.

*Elementary German Commercial Correspondence.* By Lewis Marsh, B.A. Cantab., Special Instructor in French and German to the London County Council. (Pitman.)

Part I. consists of 25 lessons on business subjects, each lesson containing a German and an English exercise, preceded by the necessary vocabulary. Part II. is devoted to correspondence—12 lessons on the same principle, together with several facsimile letters in German handwriting. Parts III. to V. deal with advertisements and commercial reports, and furnish examination papers. Abbreviations, money, and weights, &c., are placed in appendixes; and several documents are given by way of illustrations. The work has been very laboriously and thoughtfully compiled, and will do substantial service.

#### ENGLISH READERS—VARIOUS.

*Annals of the Cymry*, from 1000 B.C. to 1282 A.D., by T. Stephens, B.A. (8d. Jack), is a simple and attractive narrative of the facts, very clearly printed, and most liberally and effectively illustrated.

*Black's Literary Readers*, written and edited by John Finnemore, have as their "special feature" this: "that in all books above the Second an attempt is made to show how Britain came by her world-wide Empire." Yet "three-fourths of the prose consists of lessons of general interest," so that the books are not "over-weighted with the

(Continued on page 78.)

# DENT'S NEW EDUCATIONAL BOOKS

## The Temple English Literature Series for Schools

In view of the Board of Education's Regulations for the teaching of English Literature and Language in Secondary Schools, Messrs. Dent & Co. are publishing a large proportion of the books mentioned in the scheme, and they will add a certain number of the volumes each year according to the demands and needs of teachers.

VOLUMES NOW READY.

### ENGLISH POETRY.

Selected, with an Introduction and Notes, by ARTHUR BURRELL, M.A., Principal of Borough Road Training College, Isleworth. 1s. per volume.

I. Lyrical. II. English Heroic Verse. III. Selections from Shakespeare.

### BALLADS ANCIENT AND MODERN.

Selected, with Introduction and Notes, by OLIPHANT SMEATON, M.A. 1s.

### MAOULAY'S LAYS OF ANCIENT ROME.

With Introduction and Notes by OLIPHANT SMEATON, M.A. 1s.

### LONGFELLOW'S HIAWATHA.

With Introduction and Notes by HENRY WILLIAMS, M.A. 1s.

### LONGFELLOW'S EVANGELINE.

Edited, with Introduction and Notes, by JOHN W. COUSIN, F.F.A. Cloth boards, 8d.

### LONGFELLOW'S SHORTER POEMS.

Selected, with Introduction and Notes, by G. C. DENT, B.A. Limp cloth, 4d.

### STORIES FROM SPENSER'S FAERIE QUEENE.

By Miss N. G. ROYDE-SMITH. 1s.

### STORIES FROM LE MORTE D'ARTHUR AND MABINOIGION.

By Miss BEATRICE CLAY. 1s.

### THE ADVENTURES OF ODYSSEUS.

By J. G. MAYOR, F. S. MARVIN, and F. M. STAWELL. 1s.

### TALES FROM BROWNING.

By the Rev. G. LACEY MAY, M.A. 1s.

### STORIES FROM OARLYLE.

By D. M. FORD. 1s.

### VOYAGES OF FAMOUS BRITISH SEAMEN.

Selected from Dampier, Hakluyt, and Cook, by R. BRIMLEY JOHNSON. 1s.

Suitable for the Lower Forms of Secondary Schools.

## Stories from Shakespeare's Plays for Children.

RETOLD BY ALICE HOFFMAN.

School Edition, 6d. net each.

As You Like It. Midsummer Night's Dream.  
The Tempest. Henry V.  
Richard II. The Merchant of Venice.

PRESS NOTICES.

"Recommended without hesitation."—*Spectator*.  
"For boys and girls we can imagine—within the scope of practical possibility—no better means of introduction to dramatic literature than the admirable little books of this new series of 'Stories from Shakespeare.'"—*School Government Chronicle*.

## Classical Series.

On the Lines of "THE MODERN LANGUAGE SERIES."

### DENT'S FIRST LATIN BOOK.

By HAROLD W. ATKINSON, M.A., Sometime Head Master of the Boys' High School, Pretoria, and J. W. E. PEARCE, M.A., Head Master, Merton Court School, Sidecup. With 12 Illustrations by M. E. DURHAM. Small crown 8vo, cloth, 3s.

The *Schoolmaster* says:—"A unique book . . . it represents a wonderful stride made in teaching Latin."

### DENT'S LATIN PRIMER.

By E. S. FORSTER, M.A. 1s.

"The graduation of the matter is very carefully worked out . . . the little book is excellently done."—*Educational Times*.

NOTE.—Each of the above books contains a Phonetic Transcript of the Roman Pronunciation of passages in the Reader.

### FORUM LATINUM. A First Latin Book.

By Dr. E. VERNON ARNOLD, Professor of Latin at the University College of North Wales. Small crown 8vo, 3s. 6d.

### ÆNEÆ FACTA ET FATA. A Stepping Stone to Virgil.

With Notes and Exercises on the text by Dr. E. VERNON ARNOLD. With numerous Illustrations. Small crown 8vo, cloth, 2s.

Principals are invited to apply for DENT'S COMPLETE EDUCATIONAL CATALOGUE and for Specimen Copies of the above books.

J. M. DENT & CO., 2 Aldine House, Bedford Street, London, W.C.

# SOLID GEOMETRY THROUGH THE STEREOSCOPE.

A new departure in the teaching of this subject prepared by

**EDWARD M. LANGLEY, M.A.,**

of Bedford Modern School.

By this important work it is possible to teach many of the more difficult theorems by GRAPHIC REPRESENTATION IN SPACE of the figures illustrating them—theorems which, owing to the usual flat text-book figures, are such stumbling-blocks to the ordinary pupil.

When the student sees the figure in SOLID RELIEF he CANNOT FAIL to understand it, and the demonstration becomes clear.

Says the late Professor H. I. SMITH, of Oxford:—"The épures of descriptive Geometry do not offer much assistance to the imagination in conceiving complicated geometrical figures. Such assistance, however, is abundantly afforded by Stereoscopic representation."

This assistance may now be yours. Send for free Prospectus to—

**UNDERWOOD & UNDERWOOD, Publishers, 104 High Holborn, London, W.C.**

# EDUCATIONAL WORKS by A. K. ISBISTER, M.A., LL.B.

(LATE DEAN OF THE COLLEGE OF PRECEPTORS.)

Tenth Edition. 12mo, price 3s. 6d.

**THE ILLUSTRATED PUBLIC SCHOOL SPEAKER AND READER**, based on Grammatical Analysis, comprising a choice Selection of pieces for Reading and Recitation, annotated for Expression, Emphasis, and Pauses, and illustrated by Diagrams and Figures exhibiting to the eye the appropriate gestures and positions; to which is added a selection of Greek, Latin, French, and German Extracts, suitable for "Speech Days" at Public Schools.

New Edition. 12mo, price 1s. 6d.

**LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR BOYS**, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, of Goldsmith's "Deserted Village," set out into Principal and Subordinate Sentences, illustrating the theory of Emphasis and Pauses.

New Edition. 12mo, price 1s. 6d.

**LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR GIRLS**, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, and the Analysis of Sentences, with the figure [of a Girl] showing the proper attitude in Reading.

Eleventh Edition. 12mo, price 1s. 6d.

**FIRST STEPS IN READING AND LEARNING:** a Reading-Book for Beginners, designed to utilize the time of those learning to read, by presenting, in a series of Easy Reading and Writing Lessons, a First Course of Scripture and English History, Geography, English Grammar, Spelling, and Arithmetic, interspersed with Moral Lessons and Simple Poetry for Repetition.

LONDON: LONGMANS & CO., PATERNOSTER ROW, E.C.

special feature." However, as yet we have only Books I. and II. (10d. and 1s.), each with 8 full-page illustrations in colour, and 35 or 40 in black and white in the text. The lessons are simple, varied, and interesting, and the type and get-up are excellent.

*The Abbot*, with Introduction and Notes by H. Corstorphine, Senior English Master in Arbroath High School, is the new volume of the "Sir Walter Scott Continuous Readers" (1s. 6d. Black). The text is judiciously abridged, and the editorial matter is helpful and adequate.

*Chambers's Narrative Readers* (2d. each) consist each of a complete story, divided into chapters or parts of various lengths according to the stage of the pupil. They appear to be "supplementary" readers, though not expressly named so. (1) *Beauty and the Beast* is "for the class corresponding to Standard I." (2) *The Wild Swans* (Andersen) and (3) *The Two Brothers* (Grimm) are "for the class corresponding to Standard II." (4) *The King of the Golden River* (adapted from Ruskin) is "for the classes corresponding to Standards III. and IV." (5) *The Young Australian*, (6) *The Story of Seeyah, the Red Boy*, and (7) *The Young Canadian*, all three by J. Finnemore, are "for the class corresponding to Standard IV." The stories make attractive reading, the type is good, and there are some illustrations.

To the useful and agreeable series of *Chambers's Continuous Readers* has been added a delightful collection of *Selected Poems from Longfellow* (4d.), with concise life of the poet, and some notes and explanations.

*The A.L. Cuttings from the Press*, edited by Alfonzo Gardiner (1½d. E. J. Arnold & Son, Leeds), is an excellent collection of 71 extracts from daily and weekly papers and magazines of current literature, intended for use as reading and dictation tests in the upper classes. The more difficult words are singled out for special notice, and brief notes follow the extracts. The selection is varied and instructive. A very interesting experiment, judiciously executed.

#### STORY READERS.

We are glad to see a second edition of *In Nature's Storyland*, by Edith Hiron—"a book of Nature stories to tell with Nature lessons" (2s. 6d. Philip). The volume has been revised and enlarged, and the 24 stories are characteristically illustrated by E. K. Reader, while the Hon. M. Cordelia Leigh furnishes a preface. The stories are admirably told, and coordinated with the appropriate Nature lesson.

*Stories of Animals*, by M. T. Yates, LL.D. (Religious Tract Society), are simply narrated and amply illustrated. There are two dozen of them, widely varied, and all interesting to young readers.

Miss Anna Sewell's famous book *Black Beauty*, "the Up and Downs of a Horse's Life, told by himself," has been slightly abridged as a supplementary reader, and included in "The Empire Educational Series of Continuous Readers" published by Messrs Jarrold & Sons (1s. 6d.). A composition exercise has been added to each chapter. The story itself is delightful, and will be keenly relished by readers of the upper standards. It is, we believe, recommended by the Royal Society for the Prevention of Cruelty to Animals as the best animal story ever written.

*Science through Stories*, by Constance M. Foot, is included in Messrs. Charles & Dible's "Charlotte Series of Publications" (1s. 6d. net.). The scientific element is just enough to hang the story on, and to spice the amusement with instruction. There are ten stories, ingeniously devised and attractively told. The volume is simply and nicely got up.

#### HISTORY.

*The History of the Popes during the last Four Centuries*. By Leopold Von Ranke. In Three Volumes. The York Library. (2s. net each. Bell.)

Messrs. George Bell & Sons have placed historical students and readers under a deep debt of gratitude by the issue of Ranke's classical work in their charming and low-priced York Library. It is unnecessary to say anything about the work itself. The present translation is that of Mrs. Foster (in Boin's Standard Library), "revised and brought into accordance with the latest German edition by the inclusion of the new sections and the incorporation of various additions and alterations made since the book was first published. This work of translation and revision has been carried out by G. R. Dennis." The volumes are very handy, though none of them has fewer than five hundred pages; and the get-up is substantial as well as agreeable.

*Notes on the History and Political Institutions of the Old World.*

By Edward Preissig, Ph.D. (10s. 6d. Putnam.)

Dr. Preissig disclaims originality and sets out a list of his guides, acknowledging special indebtedness to familiar works by President Woodrow Wilson and Prof. Myers. In some 700 pages of large type he deals with Ancient, Medieval, and Modern History, mainly in Europe. The treatment lacks grip and precision, and the style is poor even for "Notes." A "strange characteristic" of Chinese "is the possibility of using one and the same word in one instance as a verb, in another as a noun, &c."—"strange" to a writer that presumably knows something of English. The paragraphs on the Roman Law appear to be a compilation without understanding: the treatment is far from satisfactory. "Diocletian," we read (page 321), "associated

with himself three co-rulers, and invested them with the title of 'Augustus.' Each of these 'Caesars' was to take up his residence in a separate portion of the Empire. . . ." Can Dr. Preissig intend his readers to understand that "Augustus" and "Caesar" were interchangeable titles? When he says presently that Diocletian "established his court at Nicomedia," he may possibly blame the printer for not setting up "Nicomedia." And so when he speaks of "Troezen, the ancient Poseidonia, a copy of the Peloponnesus" (page 98), a "copy" should possibly be a "city." There are ten useful maps, some of them similarly marred by misprints. The work needs to be drastically revised.

#### RELIGIOUS AND MORAL.

"The Century Bible."—*Ezekiel*. By W. F. Lofthouse, M.A., Tutor in Hebrew Language and Literature, Handsworth College, Birmingham. (2s. 6d. net. Jack.)

The Book of Ezekiel is extremely interesting and important: "it is not too much to say that Ezekiel holds the Old Testament together," and "he, of all Old Testament writers, binds the old dispensation most closely to the new." But it is also an extremely difficult book. Mr. Lofthouse has done his work admirably, with ample knowledge and sound judgment. In the introduction he deals with Ezekiel's work and character, the conditions of the Exile and Ezekiel's attitude, the prophet's place in the history of Hebrew prophecy, his "Utopia" or sketch of the future constitution of the Jewish Church (in his last nine chapters), his conception of God ("really the most important part of our consideration of Ezekiel"), and questions of date, canonicity, and text. This preliminary essay, with the summary notes to sections and large special points of the text, furnishes most valuable help to the lay reader and student, and will undoubtedly foster a fresh interest in the book. There is a serviceable map, seven plans to illustrate Ezekiel's temple (from the fortieth chapter onwards) the usual chronological tables, and an index.

*Jesus in Modern Criticism*. By Dr. Paul W. Schmiedel, Professor of Theology in Zürich. Translated by Maurice A. Canney, M.A. (6d. net. Black.)

This is a lecture setting out in popular manner the more important results of the author's studies on the life of Jesus. It forms a very useful supplement, or rather collateral exposition, to his articles in the "Encyclopaedia Biblica." The historical spirit is markedly cautious, and the tone is sympathetic. The lecture deserves careful study.

*The Churches and Modern Thought*. By Philip Vivian. Second and Revised Edition. (3s. 6d. Watts.)

Mr. Vivian has introduced a little fresh matter into this edition, transferred the longer footnotes to an appendix, and verified his statements generally; but substantially the work is the same as it was at first. The sub-title explains that it is "an inquiry into the grounds of unbelief and an appeal for candour." The inquiry is comprehensive, systematic, and strenuous; though vigorously destructive, it is also, to some extent constructive; it is earnest and thoughtful, temperate, and based on much knowledge; in a word, it is very capable and honestly serious, and has little or nothing in common with the methods of vulgar iconoclasm. Mr. Vivian does not convince us. He often overthrows feeble defenders of orthodoxy, but the overthrow of Christianity is quite another affair. He points rightly to the vast increase of knowledge of nature; he appreciates in a less degree the significance of the enormous gaps that still remain in our knowledge. Nor is knowledge everything. But the work is well worth patient perusal, especially by official defenders of the faith. Honest questionings should be carefully appreciated and frankly met.

#### HYGIENE.

*Physical Education of the Young*. By Samuel Smiles. Edited, with additions, by Sir Hugh Beevor, Bart., M.D., F.R.C.P. (2s. 6d. Walter Scott Publishing Company.)

It is fully three-quarters of a century since the first publication of this charming work, and "the reason for re-editing it is that it gives a very good sketch of what one believes to be the best practices in physical education." The sub-title is: "The Nature and Management of Children, founded on the study of their nature and constitution"; and the reference is to very young children rather than to children in their teens. The work thus appeals mainly to mothers, women, and girls charged with the care of children before and about the usual school age. The editor's name guarantees the scientific quality of the book up to date.

*The Laws of Health: a Handbook of School Hygiene*. By Carstairs C. Douglas, M.D., D.Sc. (Public Health), F.R.S.E., Lecturer on the Laws of Health to King's Students in Training, Glasgow University, Professor of Medical Jurisprudence and Hygiene, Anderson's College Medical School, &c. (3s. net. Blackie.)

Dr. Douglas intentionally abbreviates the anatomical and physiological exposition, assuming that this will be sought in some special manual, and concentrates his forces upon the hygienic applications. The treatment is systematic, lucid, and very full on all important points, and the style is simple and agreeable. There are 72 pertinent illustrations. A solid and sensible work.

**MATHEMATICS.**

**11042.** (Professor CATALAN.)—Démontrer que

$$X_n \frac{dX_{n-1}}{dx} - X_{n-1} \frac{dX_n}{dx} = -\frac{n}{1-x^2} (X_n^2 - 2xX_nX_{n-1} + X_{n-1}^2).$$

Solutions (I.) by Hon. G. R. DICK and S. NARAYANA AIYAR;  
(II.) by G. N. WATSON, B.A.

(I.) This result is easily deduced from the well known recurrence formulae  $(x^2-1) \frac{dP_n}{dx} = n x P_n - n P_{n-1}$ ,  $\frac{dP_{n-1}}{dx} = x \frac{dP_n}{dx} - n P_n$ ,

whence  $(x^2-1) \frac{dP_{n-1}}{dx} = n P_n - n x P_{n-1}$ ;

therefore

$$(x^2-1) \left( P_n \frac{dP_{n-1}}{dx} - P_{n-1} \frac{dP_n}{dx} \right) = n (P_n^2 - 2n P_{n-1} P_n + P_{n-1}^2).$$

The Q functions obey the same law; thus the property is true not only for the Legendrian polynomials, but also for  $P_n$  and  $Q_n$ , where  $n$  is arbitrary.

(II.) If  $u = x + (x^2-1)^{1/2} \cos \phi$ ,  $v = x - (x^2-1)^{1/2} \cos \phi$ , Laplace's integrals may be written

$$X_n = \frac{1}{\pi} \int_0^\pi u^n d\phi = \frac{1}{\pi} \int_0^\pi v^{-n-1} d\psi;$$

and therefore

$$X_n \frac{dX_{n-1}}{dx} - X_{n-1} \frac{dX_n}{dx} = \frac{1}{\pi^2} \int_0^\pi \int_0^\pi \left( -n u^{n-1} v^{-n-1} \frac{dv}{dx} - n u^{n-1} v^{-n} \frac{du}{dx} \right) d\phi d\psi$$

$$= -\frac{n}{\pi^2} \int_0^\pi \int_0^\pi u^{n-1} v^{-n-1} \left( u \frac{dv}{dx} + v \frac{du}{dx} \right) d\phi d\psi \dots (1).$$

Also  $-\frac{u+v}{(x^2-1)^2} = -\frac{2x}{(x^2-1)^2} - \frac{\cos \phi}{(x^2-1)^2} - \frac{\cos \psi}{(x^2-1)^2}$

$$= \frac{d}{dx} \left( \frac{x^2}{x^2-1} + \frac{x \cos \phi}{(x^2-1)^{3/2}} + \frac{x \cos \psi}{(x^2-1)^{3/2}} + \cos \phi \cos \psi \right)$$

$$= \frac{d}{dx} \left( \frac{uv}{x^2-1} \right);$$

i.e.,  $-\frac{u+v}{(x^2-1)^2} = \frac{1}{x^2-1} \left( u \frac{dv}{dx} + v \frac{du}{dx} \right) - \frac{2xuv}{(x^2-1)^2} \dots (2).$

Substituting in (1) from (2),

$$X_n \frac{dX_{n-1}}{dx} - X_{n-1} \frac{dX_n}{dx} = -\frac{n}{(1-x^2)} \frac{1}{\pi^2} \int_0^\pi \int_0^\pi u^{n-1} v^{-n-1} (u-2xuv+v) d\phi d\psi$$

$$= -\frac{n}{1-x^2} (X_n^2 - 2xX_nX_{n-1} + X_{n-1}^2).$$

**16802.** (Professor NANSON.)—If a body be homogeneously strained so that there is no change in the volume of any portion, show there exists a family of cubic surfaces each of which is transformed into itself, and extend the theorem to a space of any dimensions.

Solution by MAHENDRA NATH, D.E., M.A., B.Sc.

If the surface be transformed by the substitutions  $x = ax'$ ,  $y = by'$ ,  $z = cz'$ , subject to the condition  $dx dy dz = dx' dy' dz'$  (the value of any portion remaining unchanged), we must have

$$abc dx' dy' dz' = dx dy dz \text{ or } abc = 1.$$

Any surface of the system  $xyz = k$  is then transformed into

$$abcx'y'z' = k \text{ or } x'y'z' = k,$$

which is the surface itself.

More generally, the equation  $xyz \dots = k$  is transformed into itself by the substitutions  $x = ax'$ ,  $y = by'$ ,  $z = cz'$ ,  $u = du'$ , ..., subject to the condition  $dx dy dz du \dots = dx' dy' dz' du' \dots$ .

*A Method of Factorizing Composite Numbers by the aid of adjoining Numbers whose Factors are known.*

By D. BIDDLE, M.R.C.S.

All primes above 3 are of form  $6n \pm 1$ , and all composite numbers that present any difficulty in being factorized are of the same form. Let  $N$  be such a number, regarded as the product of two primes. Thus  $N = 6n \pm 1 = (6p \pm 1)(6q \pm 1)$ . Then  $N+1$  and  $N-1$  are both even, and one of them is divisible by 4, to a certainty. One of them also is divisible by 3. In the majority of cases other factors speedily follow, by trial of the smaller primes, until the remaining trunk of  $N+1$  or  $N-1$  is reduced within the limits of the excellent factor tables of

Dr. J. W. L. Glaisher and others. Let us then consider  $N+1$  and  $N-1$  to be fully factorized, whilst the factors of  $N$  are unknown.

(1) In most cases it is possible to arrange the two sets of factors in known pairs,  $G.L$  and  $K.M$ , where  $G < K$  and  $L > M$ . Thus  $G.L$  represents one of the initial numbers adjoining  $N$  and  $K.M$  the other, and, of course, it is known which; otherwise, whether it be  $N+1$  or  $N-1$  is a matter of indifference.  $G$  is the smallest in value of the four bundles of factors and  $L$  is the largest, each of the four letters generally, though not necessarily, representing a number more or less composite. They must be chosen such that  $G+K < \sqrt{N}$ , and of form  $6n \pm 1$  when together; only one of them can possibly be of that form when apart. In the class of cases now under consideration,  $G+K$  figures as the smaller factor of  $N$ , and quite a few trials will suffice to show which selection from the given groups of factors is the correct one; and that without needless division of  $N$ . If  $G$  and  $K$  be rightly chosen, we shall have  $(G+K)M + G(L-M) = 2N$ , and, in addition,  $G(L-M) = m(G+K)$ . Thus  $2N = (G+K)(M+m)$ , where  $G+K$ , a prime, is one of the two factors of  $N$ , and  $M+m$  is twice the other (which, indeed, may be composed of supernumerary factors of  $N$ , to be found by further, but similar, investigation).

It is a help to know that  $G.M \pm 1$  and  $K.L \mp 1$  are divisible by  $G+K$ . It is also convenient on occasion to take  $G=1$ , whilst  $L=N+1$  or  $N-1$  en masse. For instance, let  $N=1829$ . Then  $N+1=2.3.5.61$ , and  $N-1=2^2.457$ . By taking  $G.L=1.1828=N-1$  and  $K.M=30.61=N+1$ , we obtain  $2N=(30+1)(61+57)$ , where

$$57=(1828-61)/31. \quad N=31.59.$$

(2) In some cases, however, the choice of  $G$  and  $K$  is so limited that  $G+K$  cannot be made of form  $6n \pm 1$  or, even if so, does not respond properly to the stated tests. Under these circumstances, taking  $G$  and  $K$  as before, let  $G(L-M) = P.Q$ , such that  $G+K+P$  be a prime, and  $(G+K)(M-Q) = m(G+K+P)$ . Then we have

$$2N = (G+K+P)(Q+m),$$

where  $G+K+P$  and  $\frac{1}{2}(Q+m)$  are the factors of  $N$ .

As an instance of the first kind of case, take  $N=50693$ , where  $N+1=2^2.19.23.29$  and  $N-1=2.3.7.17.71$ . We have  $G.L=71.714$  and  $K.M=92.551$ , for  $G+K=163$ , a prime, and  $G(L-M)=71.163$ , a multiple of  $G+K$ ; therefore  $2N=163(551+71)$  and  $N=163.311$ . Of course it is a mere accident in this instance that  $m=G$ ; but, in this class of case,  $m$  is almost always a multiple of  $G$ , even when  $G$  is not a prime. As an instance of the second kind of case, let  $N=1843$ , where  $N+1=2^2.461$  and  $N-1=2.3.307$ . We can take  $G+K$  = either  $2+3$  or  $2^2+3$ , each being a prime  $< \sqrt{N}$ , but evidently neither is a factor of  $N$ . Let us, however, take  $G.L=2.922$ ,  $K.M=3.614$ , giving us

$$(G+K)M = 5.614 \text{ and } G(L-M) = 2.308 = 14.44 = P.Q.$$

Then, finding that  $(G+K)(M-Q) = 150(G+K+P)$ , we have

$$2N = (2+3+14)(44+150) \text{ and } N=19.97.$$

Selection of  $G+K$  among possible values is as necessary here as in the former class, for  $2^2+3$  does not work.

N.B.—Where  $N+1$ ,  $N-1$  fail utterly to fulfil our requirements, before we decide that  $N$  is falsely regarded as composite,  $N+a$ ,  $N-a$  may be found to serve, where  $a$  is of any value affording suitable factors to work with.

**11626.** (Professor NEUBERG.)—Si le foyer F d'une parabole P est fixe et que la tangente au sommet roule sur une courbe donnée Δ, l'enveloppe de P est l'antipodaire de F par rapport à Δ.

Solution by the PROPOSER.

Soient  $d, d'$  les directrices de la parabole P dans deux de ses positions, et M le point d'intersection des deux courbes. En abaissant les perpendiculaires ML sur  $d$  et  $ML'$  sur  $d'$ , on a  $MF = ML = ML'$ ; M est donc le centre d'une circonférence passant par F et tangente à  $d$  et  $d'$ : il est situé sur la bissectrice de l'angle LIL'. La directrice  $d$  de P enveloppe une courbe Δ' homothétique de Δ par rapport à F. Lorsque

Fig. 1.

Fig. 2.

$d'$  en roulant sur Δ' se rapproche indéfiniment de  $d$ , le point I a pour limite (Figure 2) le point de contact N de  $d$  avec Δ', IM a pour limite la normale en N à Δ', et la perpendiculaire QM élevée au milieu de FN coupe cette normale au point M, centre d'un cercle passant par F et touchant  $d$ . Donc M est le point de contact de P avec son enveloppe.

Or Q est un point de  $\Delta$  et la parallèle  $t$  à  $d$  par Q est la tangente au sommet de P; QM est en même temps la tangente en M à P et à son enveloppe; par suite M décrit l'antipodaire de F par rapport à  $\Delta$ .

**16309.** (Professor COCHEZ.)—Lieu du sommet A des triangles ABC pour lesquels BC est fixe et tels que  $(a^2 + b^2 + c^2)/\text{surf. ABC} = K$ .

Solutions (I.) by HENRY RIDDELL, M.E.; (II.) by W. F. BEARD, M.A.; (III.) by S. NARAYANA AIYAR; (IV.) by C. M. ROSS and MAHENDRA NATH, D.E., M.A., B.Sc.

(I.) We have  $a^2 + b^2 + c^2 = K \cdot \frac{1}{2} a \cdot AP$ , where AP is the perpendicular on BC from A. Hence, if D be the middle point of BC, we have  $\frac{3}{2} a^2 + 2AD^2 = K \cdot \frac{1}{2} a \cdot AP$ . On BC describe the equilateral triangle BLC, and take  $L_1$  on opposite side of BC symmetrical with L. Then  $LD^2 = \frac{3}{4} a^2$ , and we have at once  $AL^2 + AL_1^2 = K \cdot \frac{1}{2} a \cdot AP$ , also we see that  $AL_1^2 - AL^2 = 2LL_1 \cdot AP$ .

Hence  $(AL_1^2 + AL^2)/(AL_1^2 - AL^2) = (K \cdot \frac{1}{2} a)/(4 \cdot \frac{3}{4} a) = K/4 \cdot \sqrt{3}$ , and  $AL^2/AL_1^2 = \text{constant} = (K - 4\sqrt{3})/(K + 4\sqrt{3})$ .

The locus is then a series of co-axial circles varying with K, and having L and  $L_1$  for limiting points, and BC for axis. The limiting value of K for real locus is  $K \geq 4\sqrt{3}$ .

(II.) Let ABC be any position of the triangle. Bisect BC at O, draw AD perpendicular to BC, then  $a^2 + b^2 + c^2 = 2OA^2 + \frac{3}{2} a^2$ , and  $\Delta = \frac{1}{2} a \cdot AD$ ; therefore  $2OA^2 + \frac{3}{2} a^2 = \frac{1}{2} a K \cdot AD$ ; therefore

$OA^2 = \frac{1}{4} a K (AD - 3a/K)$ . Draw OF perpendicular to BC, and equal to  $3a/K$ . Draw FE parallel to BC, and produce OF to  $O'$ , so that  $FO' = OF$ ,  $OA^2 - O'A^2 = 2OO' \cdot AE$ ; but  $OA^2 = \frac{1}{4} a K \cdot AE$ ; therefore  $O'A^2 = (\frac{1}{4} a K - 2OO') AE$ ; therefore OA : O'A is constant; therefore locus of O is a circle.

[Rest in Reprint.]

**16277.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find a series of numbers expressible in two ways in the form  $N = (x^6 + y^6)/(x^2 + y^2)$ , and show that this cannot be done in three ways. Show how to resolve them algebraically into two factors (say L, M); and express these factors algebraically in their three 2-ic forms. Give two examples, one the lowest possible, and one of at least fourteen figures resolved into its prime factors.

Solution by the PROPOSER.

Let  $N = (x^6 + y^6)/(x^2 + y^2) = (x^6 + z^6)/(x^2 + z^2)$ , with same  $x$ , if possible. Then  $N = x^4 - x^2 y^2 + y^4 = x^4 - x^2 z^2 + z^4$ , which requires

$$x^2 = y^2 + z^2 \text{ (since } y \neq z \text{)} \dots \dots \dots (1)$$

The general solutions of (1) are  $x = t^2 + u^2$ ,  $y = t^2 - u^2$ ,  $z = 2tu$ , where  $t, u$  are any integers one odd, one even. Every such pair of  $t, u$  give values of N expressible in two ways as above, and only in two ways, because only two pairs  $(x, y), (x, z)$  can be thus formed.

Also, from the twin forms  $N = (y^6 + z^6)/(y^2 + z^2)$ ; therefore  $N = (y^2 - yz + z^2)(y^2 + yz + z^2) = (x^2 - yz)(x^2 + yz) = L, M$  (suppose), so that the dimorph N is always factorizable into two factors.

Ex. 1.—N a minimum; this is given by  $5^2 = 3^2 + 4^2$ ,  $N = (5^6 + 3^6)/(5^2 + 3^2) = (5^6 + 4^6)/(5^2 + 4^2) = 18.37$ .

Ex. 2.— $N > 10^{13}$ . Take  $t = 54$ ,  $u = 1$ ; whence  $x = 2917$ ,  $y = 2915$ ,  $z = 108$ ,

$$N = (2917^6 + 2915^6)/(2917^2 + 2915^2) = (2917^6 + 108^6)/(2917^2 + 108^2) = (2917^6 - 2915 \cdot 108)(2917^2 + 2915 \cdot 108) = (13.61.10333)(8823709)$$

Here M is just < 9 million, so that this number (N) is about the largest completely resolvable by the existing factor tables.

It will be found that L, M are expressible (algebraically) in the same

three 2-ic forms as the original N, viz.,

$$\begin{aligned} L &= [\frac{1}{2}(x+y-z)]^2 + [\frac{1}{2}(x-y+z)]^2 = a^2 + b^2 \\ &= (y - \frac{1}{2}z)^2 + 3(\frac{1}{2}z)^2 = A^2 + 3B^2 \\ &= [\frac{1}{2}(3x-y-z)]^2 - 3[\frac{1}{2}(x-y-z)]^2 = A'^2 - 3B'^2. \end{aligned}$$

Those of M may be found by changing  $z$  into  $-z$ .

**11814.** (T. MUIR, M.A., F.R.S.E.)—Given

$$u \equiv (a, b, c, d \sqrt{x, y})^3 + c = 0.$$

Show that  $(d^2y/dx^2)(du/dx)^3 = 2e \begin{vmatrix} a & b & c \\ b & c & d \\ y^2 & -xy & x^2 \end{vmatrix}$ , and generalize.

Solution by MAHENDRA NATH, D.E., M.A., B.Sc.

The Question as it stands seems to be wrong; it should be

$$(d^2y/dx^2)(du/dy)^3 = -54e \begin{vmatrix} a & b & c \\ b & c & d \\ y^2 & -xy & x^2 \end{vmatrix}$$

(see Ex. 8, p. 150, Williamson's *Diff. Calc.*, 8th edition).

If  $p, q, r, s, t$  stand for  $du/dx, du/dy, d^2u/dx^2, d^2u/(dx dy), d^2u/dy^2$ , we have

$$d^2y/dx^2 (du/dy)^3 = -(q^2r - 2pqs + p^2t) \dots \dots \dots (1)$$

(see p. 125, Edwards' *Diff. Calc.*).

$$\begin{aligned} \text{Now } p &= 3(ax^2 + 2bxy + cy^2), & q &= 3(bx^2 + 2cxy + dy^2), \\ r &= 6(ax + by), & s &= 6(bx + cy), & t &= 6(cx + dy). \end{aligned}$$

Also  $rx + sy = 2p, sx + ty = 2q$ ;

therefore  $(ps - qr)x = (qs - pt)y$ ;  
therefore  $(ps - qr)/y = (qs - pt)/x = [p(qs - pt) + q(ps - qr)]/(px + qy)$   
 $= -(q^2r - 2pqs + p^2t)/(px + qy)$   
 $= (q^2r - 2pqs + p^2t)/3e$ ;

therefore  $q^2r - 2pqs + p^2t = 3e(ps - qr)/y = 3e/y \begin{vmatrix} p & r \\ q & s \end{vmatrix}$ ,

$$\begin{aligned} 3e/y \begin{vmatrix} p & r \\ q & s \end{vmatrix} &= 3e/2y \begin{vmatrix} rx + sy & r \\ sx + ty & s \end{vmatrix} = 3e/2y \begin{vmatrix} sy & r \\ ty & s \end{vmatrix} \\ &= -\frac{3}{2}e(rt - s^2) = -\frac{3}{2}e \cdot 36 \begin{vmatrix} a & b & c \\ b & c & d \\ y^2 & -xy & x^2 \end{vmatrix} \\ &= -54e \begin{vmatrix} a & b & c \\ b & c & d \\ y^2 & -xy & x^2 \end{vmatrix}. \end{aligned}$$

More generally, if  $u = (a, b, c, d, \dots \sqrt{x, y})^n + c = 0$ , we can prove by an exactly similar method that

$$d^2y/dx^2 (du/dy)^3 = -[n(n-1)]e(rt - s^2) - [n(n-1)]e \times (\text{the Hessian of the function } u).$$

**16818.** (L. ISSERLIS, B.A.)—Show that

$$(1-x^n)(1+x) - 2nx^n(1-x) - n^2x^n(1-x)^2,$$

where  $n$  is a positive integer, is divisible by  $(1-x)^3$ .

Solutions (I.) by C. M. ROSS, A. R. CHARBONNIER, and others; (II.) by Lt.-Col. ALLAN CUNNINGHAM, R.E., and K. S. PATRACHARI.

(I.) The expression may be written

$$f(x) = 1 + x - x^n(1+n)^2 - x^{n+1}(1-2n-2n^2) - n^2x^{n+2} \dots \dots \dots (1),$$

then  $f'(x) = 1 - n(1+n)^2x^{n-1} - (n+1)(1-2n-2n^2)x^n - n^2(n+2)x^{n+1} \dots \dots \dots (2),$

and  $f''(x) = -n(n-1)(1+n)^2x^{n-2} - n(n+1)(1-2n-2n^2)x^{n-1} - n^2(n+1)(n+2)x^n \dots \dots \dots (3).$

Put  $x = 1$  in (3), then  $f''(1) = 0$ , which shows that  $f''(x)$  is divisible by  $(1-x)$ . Hence  $f(x)$  is divisible by  $(1-x)^3$ . Hall and Knight's *Higher Algebra*, § 560.

(II.) Let N denote the given quantity. Then

$$\begin{aligned} N/(1-x) &= (1-x)(1+x+x^2+\dots+x^{n-1}) - 2nx^n - n^2x^n(1-x) \\ &= (1+2x+2x^2+\dots+2x^{n-1}+x^n) - 2nx^n - n^2x^n(1-x) \\ &= \{(1-x^n) + 2(x-x^n) + 2(x^2-x^n) + \dots + 2(x^{n-1}-x^n)\} \\ &\quad - n^2x^n(1-x), \\ N/(1-x)^2 &= \left\{ \begin{aligned} &1 + x + x^2 + x^3 + \dots + x^{n-2} + x^{n-1} \\ &+ 2x + 2x^2 + 2x^3 + \dots + 2x^{n-2} + 2x^{n-1} \\ &+ 2x^2 + 2x^3 + \dots + 2x^{n-2} + 2x^{n-1} \\ &\vdots \\ &+ 2x^{n-2} + 2x^{n-1} \end{aligned} \right\} - n^2x^n \\ &= \{1 + 3x + 5x^2 + 7x^3 + \dots + (2n-3)x^{n-2} + (2n-1)x^{n-1}\} \\ &\quad - \{x^n + 3x^n + 5x^n + 7x^n + \dots + (2n-3)x^n + (2n-1)x^n\} \\ &= (1-x^n) + 3(x-x^n) + 5(x^2-x^n) + 7(x^3-x^n) + \dots \\ &\quad + (2n-1)(x^{n-1}-x^n). \end{aligned}$$

Every term is obviously divisible by  $(1-x)$ , so that  $N$  is divisible by  $(1-x)^3$ , and the quotient is easily seen to be

$$N/(1-x)^3 = 1 + 4x + 9x^2 + 16x^3 + \dots + n^2x^{n-1}.$$

**16080.** (Professor NANSON.)— $R$  is a point on a line which passes through a fixed point  $O$  and cuts two given intersecting lines in  $P, Q$ . Having given any homogeneous relation between  $OP, OQ, OR$ , find the equation of the locus of  $R$ : for example, let  $OR$  be a mean, arithmetic, geometric, or harmonic, between  $OP$  and  $OQ$ .

*Solution by the PROPOSER.*

Taking the fixed lines as axes, and  $a, b; x, y$  as the co-ordinates of  $O, R$ , we have by parallels

$$OR/OQ = 1-x/a, \quad OR/OP = 1-y/b.$$

Hence, if the given relation is  $F(OR/OQ, OR/OP) = 0$ , the required equation is  $F(1-x/a, 1-y/b) = 0$ . In the three examples we have obviously  $a \cdot x + b/y = 2, 1, \text{ or } 0$ .

**QUESTIONS FOR SOLUTION.**

**16346.** (T. MUIR, LL.D. See *The Educational Times*, January, 1908.)—A correspondent points out that evidently for

$$(ab - cd)(bc - da)(cd - ab),$$

we should read " $(bc - ad)(ca - bd)(ab - cd)$ ."—EDITOR.

**16364.** (H. STANLEY REDGROVE, F.C.S.)—Four rods are hinged together, one end of each rod being free. The rods are of length  $l$  and are identical. The rods repel one another, and the force of repulsion between any particle of any one rod and any particle of any other rod equals  $k/d^2$ , where  $k$  is constant, and  $d$  is the distance between the particles. The position of equilibrium will be such that, if the hinged ends of the rods are situated at the centre of gravity of a regular tetrahedron, the other ends will be at its four corners respectively. Find the work done (neglecting gravity, &c.) in the two following cases:—(i.) Two of the rods are moved, each through an angle  $\theta$ , towards one another in the plane containing them. (ii.) Three of the rods are moved until coincident and in one straight line with the fourth rod.

**16365.** (Professor NANSON.)—Show from the relative situation of the real roots of the cubics  $(abcd)(x1)^3, (bcde)(x1)^3$ , that the roots of the quartic  $(abcde)(x1)^4$  are all imaginary, if  $b^2 - ac, d^2 - ce$  are negative and  $c^2 - bd$  is positive.

**16380.** (V. DANIEL, B.Sc.)—Two triangles (of given areal modulus  $\lambda^2 \equiv 1/\lambda'^2$ ) have

$$\cot A + \cot A' = \cot B + \cot B' = \cot C + \cot C' = r \sqrt{3}.$$

If the relations of circumscription and inscription ( $A$  on  $a', A'$  on  $a, \dots$ ) are mutually interchangeable by rotation of either triangle through an angle  $\theta$  about the same point, show that

$$(x^2 - \lambda^2)(x^2 - \lambda'^2) = 4 \cos^4 \frac{1}{2} \theta \quad \text{or} \quad 4 \sin^4 \frac{1}{2} \theta.$$

**16381.** (E. J. ERDEN, B.A.)— $ABC$  is any plane triangle. (a) Through  $A, B, C$  lines are drawn trisecting the angles  $CAB, ABC, BCA$  respectively. Let  $(A, B)$  denote that trisector of the angle  $CAB$  which is nearest to the side opposite the angle  $B, \dots$ ; show geometrically (or otherwise) that the triangle determined by the points

$$(B, A), (C, A); (C, B), (A, B); (A, C), (B, C) \dots\dots(1, 2, 3)$$

is equilateral.

(b) Let the exterior angles be trisected. Let  $AB, AC$  be produced, and let the trisectors of the exterior angle at  $B$  nearest to  $BC$ , and to  $AB$  produced be denoted by  $(B', A)$  and  $(B', C)$  respectively; then the triangle determined by the points

$$(A, C), (B', C); (A, B), (C', B); (B', A), (C', A)$$

is equilateral. So also the triangles determined by producing  $BA, BC; CA, CB$  respectively, and applying the same construction, are equilateral.

(c) The triangle determined by the points

$$(B', A), (C', A); (A', B), (C', B); (A', C), (B', C)$$

by producing  $AB, AC; BA, BC; CA, CB$  respectively is equilateral.

(d) The property (a) holds good when one vertex is at infinity, and the triangle degenerates into a finite straight line and two parallels drawn in the same direction through its extremities.

The lines trisecting the vertical angle at infinity are represented by two lines drawn parallel to the infinite sides from the points of trisection of the finite side.

**OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).**

**10580.** (D. BINDLE.)—The centroids of an equilateral triangle and of a square in the same plane coincide, and the relative sizes of the two figures are such that the in-circle of one does not exceed the circum-circle of the other. Find the mean coincident areas (1) for particular relative sizes, (2) for all relative sizes within the given limits.

**11050.** (The late Professor CLIFFORD, F.R.S.)—If  $s$  and  $z$  are connected by the equation  $As^2 + Bs + C = 0$ , where  $A, B, C$  are quadratic functions of  $z$ , (1) describe the Riemann's surface which will represent  $s$  as a complex function of  $z$ , and (2) prove that, without tearing, it may be transferred into the surface of a body with one hole in it; also, (3) find a rational function of  $s$  and  $z$  whose integral is finite for all values of the variables, and (4) show that this integral has two periods.

**11164.** (Professor STEGGALL, M.A.)—Find (1) the temperature at every point of an infinite solid of which a spherical portion of radius  $a$  was initially heated to temperature unity, the rest being at temper-

ature zero; also (2) the equation giving the time at which the temperature at any point reaches its maximum; and show what this becomes when the quantity of heat in the given spherical portion remains constant, while its radius becomes infinitely small.

11250. (Professor CROFTON, F.R.S.)—Prove that

$$(x^{-1}D)^r e^x = e^x (1 + \frac{1}{2}D)^{r-1} x^{-r}.$$

Hence, show that the  $r$ -th differential coefficient of  $\exp(x^2)$  is

$$\exp(x^2) 2^{-r} x^{-2r} \left( 1 - \frac{r(r-1)}{2} x^{-4} + \frac{(r+1)r(r-1)(r-2)}{2.4} x^{-8} - \frac{(r+2)(r+1)r(r-1)(r-2)(r-3)}{2.4.6} x^{-12} + \dots \right).$$

11402. (Professor SCHOUTE.)—Given a cubic in space, find the degrees of the surfaces enveloped by the planes that intersect the cubic in the vertices of (1) an isosceles triangle, (2) an equilateral triangle.

11448. (Professor ORCHARD, M.A., B.Sc.)—Find the locus of the vertex of an isosceles spherical triangle, of which each base angle equals  $A$ .

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, January 9th, 1908.—Prof. W. Burnside, President, in the Chair.

Mr. T. J. Garstang was elected a member.

Prof. A. E. H. Love spoke on "The Distinctive Character of Lord Kelvin's Mathematical Investigations," and moved a resolution of condolence with Lady Kelvin. This was seconded by Sir W. D. Niven, and carried unanimously.

The following paper was communicated:—

"A Formula of Interpolation," Mr. C. S. Jackson.

Informal communications were made as follows:—

"Hilbert's Invariant Integral in the Calculus of Variations," Mr. T. J. P.A. Bromwich.

"An Operator related to  $q$ -Series," Rev. F. H. Jackson.

JUST PUBLISHED.

THE NINE POINT CIRCLE.

With Notes on (1) Simson's Line, (2) The Radical Axis, (3) The Quadrilateral.

Contributed to the "Educational Times," "Mathematical Gazette," "Nouvelles Annales," "Mathesis," and "American Monthly."

By WILLIAM GALLATLY, M.A.

ELIJAH JOHNSON, 30 TRINITY STREET, CAMBRIDGE.

PRICE ONE SHILLING.

Thirty-first Thousand. Crown 8vo, 4s. 6d.

ENGLISH LESSONS FOR ENGLISH PEOPLE. By the Rev. EDWIN A. ABBOTT, D.D., and Sir J. R. SEELEY.

By the Rev. A. E. ABBOTT, D.D.

THE STORY OF THE ILIAD.

THE STORY OF THE ODYSSEY.

LONDON: SEELEY & CO., LTD., 38 GREAT RUSSELL STREET.

Now Ready. A New and Revised Edition of DE FIVAS' NEW GRAMMAR OF FRENCH GRAMMARS.

ENLARGED BY THE ADDITION OF CAREFULLY CHOSEN GRADUATED FRENCH TEXTS FOR PREPARATORY READING AND TRANSLATION.

Foolscap 8vo, 474 pages, price 2s. 6d., cloth. (KEY, 3s. 6d.)

"This is perhaps the best known French Grammar in the country. Having used it ourselves, we can speak in the highest terms of its all-round excellence."—Teachers' Aid.

BOOKS FOR TECHNICAL STUDENTS.

PRACTICAL CHEMISTRY FOR ARMY AND MATRICULATION CANDIDATES, AND FOR USE IN SCHOOLS. By GEOFFREY MARTIN, B.Sc., Ph.D. With 74 Illustrations. Crown 8vo, cloth. Net 2/-

THE ELEMENTS OF ELECTRICAL ENGINEERING. A First Year's Course for Students. By TYSON SWELL, A.M.I.E.E., Lecturer and Demonstrator in Electrical Engineering at the Polytechnic, Regent Street, London. 4th Edition, Revised, with Additions. 460 pp., with 278 Illustrations. Large crown 8vo, cloth. Net 5/-

ELEMENTARY ELECTRICAL ENGINEERING. In Theory and Practice. A Class-book for Junior and Senior Students, and Working Electricians. By J. H. ALEXANDER, M.B., A.I.E.E. With 181 Illustrations. Crown 8vo, cloth. Net 3 6

PRACTICAL COAL-MINING. An Elementary Class-Book for the use of Students preparing for Examinations, or Qualifying for Colliery Managers' Certificates. By T. H. COCKIN, Lecturer on Coal-Mining at Sheffield University College. With Map of the British Coal-fields and over 200 Illustrations. 440 pp., crown 8vo, cloth. Net 4/6

ORIENTAL MANUALS AND TEXT-BOOKS. — Messrs. CROSBY LOCKWOOD & SON will forward on application a Catalogue of Text-Books and Manuals for Students in Oriental Languages, many of which are used as Text-Books for the Examinations for the Indian Civil Service and the Indian Staff Corps; also as Class-Books in Colleges and Schools in India.

London: CROSBY LOCKWOOD & SON, 7 Stationers' Hall Court, E.C., & 121a Victoria Street, S.W.

GEOMETRY: PLANE AND SOLID.

By JOHN S. RAWLE, F.S.A.,

LATE EXAMINER TO THE SCIENCE AND ART DEPARTMENT.

More than 600 Diagrams.

Over 280,000 copies sold.

INDISPENSABLE TO ALL TO WHOM A KNOWLEDGE OF GEOMETRY IS A NECESSITY.

Paper bound, 1s. Cloth bound, 2s.

Adapted to the requirements of all Science and Art Classes, Public Schools, &c.; also a reliable Text-book for the Examinations of the Science and Art Department, the Army and Navy, &c., &c.

For use in conjunction with the above:—

CLASS-SHEETS FOR PRACTICAL GEOMETRY ..... 1s.  
PRACTICAL GEOMETRY TEST-PAPERS ..... 4d.

Also:—

FREEHAND DRAWING TEST-PAPERS ..... 1s.  
ARTIST'S SIGHT-MEASURE ..... 2s. 6d.

LONDON:

SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LIMITED.

EXAMINATION PAPER

AS USED BY THE

COLLEGE OF PRECEPTORS.

In strict accordance with the College requirements, and each Sheet bears their Watermark.

Packed in Beams of 480 Sheets ... per Beam, 2s.

" " 960 " " " " 4s.

Bookkeeping Paper, ruled for Ledger, Cash Book, and Journal, 1s. per 100 Sheets.

Music Paper, 1s. per 100 Sheets.

Remittance should accompany Order.

F. W. SHELBORNE & CO., Wholesale and Retail Stationers, 63 HIGH HOLBORN, LONDON, W.C.

## WHITTAKER'S EDUCATIONAL BOOKS.

**FIRST FRENCH BOOK (Direct Method).** With 22 Illustrations. 1s. net.

**SECOND FRENCH BOOK (Direct Method).** With 37 Illustrations. 1s. 6d. net.

By D. MACKAY, M.A., and F. J. CURTIS, Ph.D.

"Provides the most complete set of apparatus for the practice of the 'New Method' that we have yet seen in a single text-book."—*Guardian*.

**GERMAN FOR BEGINNERS:** A Reader and Grammar on the *Direct Method* of Teaching German. By L. HARCOURT. With numerous Illustrations. In Two Parts. Part I., 1s. 6d. net. Part II., 2s. net.

"We can commend this beginner's book most heartily as a wise, simple, practical, and interesting one, worthy of introduction into schools where German is taught for use and enjoyment rather than show or cram."—*Educational News*.

**SCHOOL GEOGRAPHY.** By CHARLES BIRD, B.A., F.G.S., Head Master of the Mathematical School, Rochester. With Sketch Maps and Diagrams. 2s. 6d.

*This book is based upon the Scheme of Geographical Teaching drawn up by the Head Masters' Association.*

"Mr. Bird possesses the first requisite for success—a plain and straightforward style."—*Journal of Education*.

**HEAT, LIGHT, AND SOUND.** An Introductory Course of Practical Exercises. By J. REGINALD ASHWORTH, D.Sc., F.Phys.S. 2s. net.

**TEXT-BOOK OF BOTANY. Part I. The Anatomy of Flowering Plants.** For Students preparing for the Oxford and Cambridge Locals, London University, and other Examinations. By M. YATES. With 413 Illustrations. 2s. 6d.

**ZOPF UND SCHWERT.** Lustspiel von Karl Gutzkow. Edited, with Notes, by F. LANGE, Ph.D. 2s.

**EKKEHARD.** Von Victor von Scheffel. With Introduction and Notes by H. HAGER, Ph.D. 2s.

**DIE JOURNALISTEN.** Von Gustav Freytag. Edited, with Notes, by F. LANGE, Ph.D. 2s.

*Educational Catalogue post free.*

WHITTAKER & CO., 2 White Hart Street, Paternoster Sq., London, E.C.

## SARLL'S EXAM. BOOK-KEEPING.

SARLL'S Text-book Sales nearly 250,000.

### SARLL'S MODERN BOOK-KEEPING.

Founded on Sarll's DOUBLE ENTRY. Consists of four GRADUATED COURSES—Introductory, Theory, Practice, Trial Balances—followed by forty EXAM. PAPERS with full or outline KEYS. An Elementary and Intermediate Text-Book for ALL EXAMS. The results of a LIFETIME. 410 pp., 3s. 6d. [Now ready.]

### SARLL'S BOOK-KEEPING FOR NEW CODE.

Stage I., Introductory; II., Practical; III., Theory or Journalising. Each 48 pages. Price 4d. Outline Keys. MS. Books, 2d. each.

### SARLL'S PRACTICAL BOOK-KEEPING.

Fourteenth (greatly improved) Edition. *Teachers' Aid* says: "There is no cheaper and safer guide." Consists of GRADUATED EXERCISES with full, and Exam. Papers with outline, Keys. 128 pages, 1s. MS. Books, superior, 1s. Cheap, 4d.

### SARLL'S DOUBLE-ENTRY BOOK-KEEPING.

Fifteenth Edition. 256 pages. 2s. Consists of GRADUATED EXERCISES with full, and Exam. Papers with outline, Keys. *Practical Teacher* says: "We heartily recommend it as the best and cheapest manual we have seen." A School Edition, without Keys. 128 pages, 1s. Superior MS. Books, 1s. Cheap, 4d.

### SARLL'S TWENTIETH CENTURY EXAM. BOOK-KEEPING.

Containing Papers by the leading Examining Boards, with outline Keys. In Two Parts, at 6d. each. Part I., Junior Papers, College of Preceptors, University Local, Scotch Leaving Certificates, &c. Part II., Senior Papers, Society of Arts, London Chamber of Commerce, Lancashire and Cheshire Union, West Riding, &c.

*Sarll's Supplementary Keys.*

#### 1. TO SARLL'S PRACTICAL.

Exercises fully worked, 2s.

#### 2. TO SARLL'S DOUBLE-ENTRY.

Exercises fully worked, 3s.

\*.\* Specimen Copies at one-third off, or Teachers can have Parcels for inspection, post free, from A. SARLL, A.K.C., 62 Oakley Road, London, N.

Lessons by Correspondence and School Exams. conducted.

LONDON: GEORGE GILL & SONS, 13 WARWICK LANE, E.C.

## EVERY SECONDARY SCHOOL

submitting a Scheme of Geography for approval requires Maps, Globes, and Atlases. These are supplied by G. W. BACON & CO., LTD., in great variety.

Among their Maps are

### BACON'S EXCELSIOR MAPS.

"Large, clear and up-to-date." Size, about 4 ft. by 5 ft. 20 in the Series, with 20 Test Maps, same size and price to correspond. Price 15s. each.

The best notions of Physical Geography can be obtained by the use of

### BACON'S RELIEF WALL MAPS.

They show in photographic relief "the disposition of highlands and lowlands and the chief river valleys," as recommended in Circular 561. They can be had with or without the principal town spots marked in red, and are as effective as Models, at one sixth the price. 36 ins. by 48 ins. Price 7s. 6d.

A perfect teaching Map can be obtained in

### BACON'S RELIEF and POLITICAL MAPS

Mounted side by side. Size, 62 ins. by 42 ins. Price 13s. each. Europe and North America are ready, others are in preparation.

### BACON'S ELEMENTARY MAP OF THE WORLD

is indispensable in the Preliminary Course. Size, 60 ins. by 40 ins. Price 12s.

### BACON'S ATLASES

are adapted to all classes of Secondary Schools.

### BACON'S RELIEF ATLAS

has 16 of the finest Relief Maps ever published, with 16 corresponding Political Maps, "not overburdened with detail of any kind." Price 6d., 3d., and 1s. net.

### BACON'S MEMORY MAP ATLAS AND TEXT-BOOK,

price 3s. 6d., is in use in a large number of Secondary Schools, and

### BACON'S UPPER CLASS ATLASES,

sections of the Memory Map Atlases price 4d., have had an extraordinary sale.

Catalogues, &c., free.

G. W. BACON & CO., LTD., 127 STRAND.

WILL BE READY IN MARCH.

Demy 8vo, cloth, price 2s. 6d., free by post.

To Members of the College the price is 1s., or 1s. 6d. free by post.

## THE CALENDAR OF THE COLLEGE OF PRECEPTORS

FOR THE YEAR 1908:

CONTAINING

All information respecting the objects and operations of the College, Lists of Officers, Examiners, and Members, the Regulations of the various Examinations, &c., with an Appendix containing the following Examination Papers:—

1. Papers set at Examination of Teachers for Diplomas, Midsummer, 1907.
2. Do. do. do. Christmas, 1907.
3. Papers set at Examination of Pupils for Certificates, Midsummer, 1907.
4. Do. do. do. Christmas, 1907.
5. Papers set at Professional Preliminary Examination, March, 1907.
6. Do. do. do. September, 1907.
7. Papers set at Lower Forms Examination ... .. Midsummer, 1907.
8. Do. do. ... .. Christmas, 1907.

\*.\* Nos. 3, 4, 5, and 6 may be had separately, price, free by post, 7d. each set. Nos. 7 and 8, price, free by post, 4d. each set.

The Diploma Papers are to be had only in the "Calendar."

FRANCIS HODGSON, 89 FARRINGTON STREET, LONDON, E.C.

# OXFORD UNIVERSITY PRESS.

## OXFORD MODERN FRENCH SERIES.

EDITED BY LEON DELBOS,

Formerly Senior Instructor in French to Royal Naval Cadets.

*Educational Times*.—"An excellent and welcome series. The variety, the interest, and the excellence of the matter are obvious from the mere enumeration."  
*Le Français*.—"Les volumes déjà publiés ont été édités avec un grand soin, et les ouvrages choisis ont le plus grand honneur aux connaissances littéraires de M. Leon Delbos."

### LATEST VOLUMES.

21. **Souvenirs de la Vie Militaire.**  
By Comte PIERRE DE CASTELLANE. Edited by W. G. HARTOG. 2s.
22. **Le Colonel Chabert.**  
By BALZAC. Edited by H. W. PRESTON. 2s.
23. **Louis XI et Charles le Téméraire.**  
By MICHELET. Edited by E. BENAULT. 2s. 6d.
24. **La Jeunesse de Bonaparte.**  
By DE BOURRIENNE. Edited by A. CANIVET. 2s.
25. **Mélanges Littéraires.**  
By T. S. ANDRIEUX. Edited by E. C. JONES. 2s.
26. **La Jeunesse de Chateaubriand.**  
Edited by GERALD GOODRIDGE. 3s.
27. **Le Roman d'un Jeune Homme Pauvre.**  
By OCTAVE FÉCILLET. Edited by J. LAFFITTE. 2s. 6d.
28. **Servitude et Grandeur Militaire.**  
By ALFRED DE VIGNY. Edited by C. L. FREEMAN. 2s. 6d.
29. **Journal d'un Voyage aux Mers Polaires.**  
By Lieut. RENÉ BELLOT. Edited by H. J. CHAYTOR. With a Map. 184 pp., 2s. 6d.
30. **Les Fiancés du Spitzberg.**  
By XAVIER MARMIER. Edited by A. A. HENTSCH. 3s.
31. **Marignan: Conquête et Perte du Milanais.**  
By J. C. L. SIMONDE DE SISMONDI. Edited by A. WILSON-GREENE. 2s.

## OXFORD HIGHER FRENCH SERIES.

EDITED BY LEON DELBOS. Extra fcap. 8vo.

*Journal of Education*.—"The series marks a new departure. The volumes have been chosen for their literary merit, and the annotation is mainly on literary lines."  
*Educational Times*.—"In every respect the series attains to excellence."

### LATEST VOLUMES.

- Contes et Nouvelles.**  
By PROSPER MÉRIMÉE. Edited by J. E. MICHELL. 2s. net.
- lambes et Poèmes.**  
By AUGUSTE BARBIER. Edited by CH.-M. GARNIER. 2s. net.
- Eugénie Grandet.**  
HONORÉ DE BALZAC. Edited by H. E. BERTHON. 2s. 6d. net.

SELECT LIST OF EDUCATIONAL WORKS (32 PAGES) AND COMPLETE CATALOGUE (144 PAGES) POST FREE.

London: HENRY FROWDE, Oxford University Press, Amen Corner, E.C.

London: Printed by C. F. HODGSON & SON, 2 Newton Street, Kingsway, W.C.; and Published by FRANCIS HODGSON, 89 Farringdon Street, E.C.  
[Entered at the New York Post Office as Second Class matter.]

## New Books for School Prizes & Libraries.

### Oxford Treasury of English Literature.

By G. E. HADOW, Tutor in English Literature, Lady Margaret Hall, Oxford; and W. H. HADOW, Fellow of Worcester College, Oxford. 3s. 6d. each.

**Vol. I—OLD ENGLISH TO JACOBÆAN.** [Second Edition.]  
*Tribune*.—"The editors of this volume have performed a difficult task with admirable discrimination."

**Vol. II—GROWTH OF THE DRAMA.**  
*Journal of Education*.—"There is originality not only in the conception, but in the choice of materials. The introductions prefixed to the extracts are models of literary criticism."

**Vol. III—In preparation.**

### The Writing of English.

By PHILIP J. HARTOG, Academic Registrar of the University of London; sometime Bishop Berkeley Fellow of the Owens College, and Lecturer in the Victoria University, Manchester. With the assistance of Mrs. AMY H. LANGDON. Crown 8vo, 2s. 6d.

*Athenæum*.—"If parents and schoolmasters will pay heed to the good counsel and practical suggestions in this handy and valuable little work, no future writer on literary studies in our schools will, we think, be able to begin his first chapter—as Mr. Hartog begins his—with the discouraging statement, 'The average English boy cannot write English.'"

### The Oxford Book of French Verse.

**Thirteenth Century to Nineteenth Century.**  
Chosen and edited by ST. JOHN LUCAS. Second Impression. Fcap. 8vo, 6s. net; on Oxford India paper, 7s. 6d. net.

*Athenæum*.—"The best selection that has been printed in England. The Introduction, in fewer than thirty small pages, gives a rapid and brilliant survey of French poetry from the thirteenth century to the nineteenth."

### A Historical Geography of the British Colonies.

**Vol. VI.—AUSTRALASIA.**

By J. D. ROGERS, Barrister-at-Law. Formerly Stowell Fellow of University College, Oxford. Crown 8vo, cloth, with 22 Maps, 7s. 6d. Also separately, Part I (Historical), 4s. 6d.; Part II (Geographical), 3s. 6d.

*British Australasian*.—"As a complete and compendious history of the Australasian Colonies from their beginnings up to the present day, the volume is an authoritative and unique handbook."

### The Rise of the Greek Epic.

Being a Course of Lectures delivered at Harvard University. By GILBERT MURRAY, Fellow of New College, Oxford; formerly Professor of Greek in the University of Glasgow. Demy 8vo, 6s. net.

*Tribune*.—"Philology, archaeology, anthropology, comparative mythology, and higher criticism of every kind are combined with the scholarship, the acute detective faculty, the splendid darning, and the humour of an exceptionally brilliant man."

### The Attic Theatre.

A Description of the Stage and Theatre of the Athenians, and of the Dramatic Performances at Athens. By A. E. HAIGH, late Fellow of Corpus Christi College, Oxford. THIRD EDITION, Revised, and in part Rewritten, by A. W. PICKARD-CAMBRIDGE, Fellow of Balliol College. 8vo, with Illustrations, 10s. 6d. net.

*Cambridge Review*.—"The third edition contains a considerable quantity of new matter without omitting anything essential."

### A History of Music in England.

By ERNEST WALKER, M.A., D.Mus., Balliol College, Oxford. 8vo, cloth, 7s. 6d. net.

*Standard*.—"Worthy in every way to rank as the standard work on a most important subject."

### Sidney's Apologie for Poetrie.

Edited, with Introduction, Notes, and Index, by J. CHURTON COLLINS, Professor of English Literature in the University of Birmingham. Crown 8vo, with a Facsimile Title-Page, price 2s. 6d.

*Birmingham Gazette*.—"Prof. Collins's introduction is an interesting and scholarly piece of work."

# MACMILLAN & CO.'S TEXT-BOOKS

SUITABLE FOR THE COLLEGE OF PRECEPTORS' EXAMINATIONS, MIDSUMMER AND DECEMBER, 1908.

**THE INTERNATIONAL GEOGRAPHY.** By SEVENTY AUTHORS. Edited by H. R. MILL, D.Sc. With 489 Illustrations. New Edition, 8vo, complete, 12s. net.

The following Sections are issued separately with Exercises and Examination Papers in the Text:—I. BRITISH ISLES, 1s.; II. EUROPE, 2s. 6d.; III. ASIA, 2s.; IV. AUSTRALIA, 1s. 6d.; V. NORTH AMERICA, CENTRAL AMERICA, and the WEST INDIES, 2s.; VI. SOUTH AMERICA, 1s. 6d.; VII. AFRICA, 2s. \* \* \* Please write for detailed Prospectus.

# CAMBRIDGE UNIVERSITY PRESS

**Slavonic Europe: a Political History of Poland and Russia from 1447 to 1796.** By R. NISBET BAIN, Assistant Librarian, British Museum, Author of "Scandinavia," "The First Romanovs," "Gustavus III. and his Contemporaries," &c.

Cambridge Historical Series.  
Crown 8vo, 5s. 6d. net.

This book is, the author believes, the only existing compendium, in English, of the political history of Poland and Russia, from the middle of the fifteenth to the end of the eighteenth century, when the Polish Republic disappeared from the map of Europe and the Russian Empire took its place as the head and right arm of the Slavonic World. In nineteen necessarily brief chapters, the author presents a clear and connected outline of the whole panorama of events, omitting nothing essential, giving due prominence to the human element which, after all, must ever be the determining factor of history, and throwing into clear relief, by the light of the most recent criticism, many murky and nebulous districts of this immense and hitherto but partially explored region.

**The Modern Language Review.** A Quarterly Journal devoted to the Study of Medieval and Modern Literature and Philology. Edited by Prof. JOHN G. ROBERTSON, with the assistance of an Advisory Board.

**Contents of Vol. III., No. 2, January, 1908.**—  
The Influence of Dante in Spanish Literature. By W. H. HUTTON.  
The Date of Chapman's "Bussy D'Ambois." By T. M. PARROTT.  
Notes on some English University Plays. By G. C. MOORE SMITH.  
Dante and the "Gospel of Barnabas." By LONSDALE RAGO.  
The Missing Title of Thomas Lodge's Reply to Gosson's "School of Abuse." By J. DOVER WILSON.  
**MISCELLANEOUS NOTES:**—A Note on Bishop Hall's Satires, "Vindemiae." V. i., 65-72. By E. BENSLY.—An Unrecorded Reading in "Piers Plowman." By C. TALBOT ONIONS.—Middle English "Coveise." By C. TALBOT ONIONS.—Shakespeareana. By W. H. WILLIAMS.—Reviews.—Minor Notices.  
"The Modern Language Review" appears four times a year—in October, January, April, and July. The annual subscription is 8s. net (post free 8s. 6d.), payable in advance.  
Vol. I. (1905-6) and Vol. II. (1906-7) may be had, bound in buckram, at 10s. net each.

Vol. III., No. 2  
2s. 6d. net.

Subscription Price.

**Modern Electrical Theory.** By NORMAN ROBERT CAMPBELL, M.A., Fellow of Trinity College, Cambridge.

Demy 8vo, pp. xii + 332.  
7s. 6d. net.

The author has attempted to expound the subject in its logical order, to analyse the arguments by which the various phenomena are correlated, to draw special attention to the assumptions that have been made, and to show which of these assumptions are fundamental in the modern theory of electricity, and which may be expected to be abandoned in the further progress of investigation. In the selection of the material to be treated, subjects have been selected not for their intrinsic importance or for the interest of the accessory studies with which they are connected, but for the light which they throw upon the central problem, the relation of electricity and matter.

**Electricity and Magnetism.** An Elementary Text-book, Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S., Director of the National Physical Laboratory.

Crown 8vo, 6s.

"Every schoolmaster and teacher who has under consideration the selection of a text-book for his better students should most certainly look into this book. The information is everywhere absolutely sound and reliable."—*Guardian*.

**Mechanics and Hydrostatics.** An Elementary Text-book, Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S.

Crown 8vo, 6s.  
Or in 3 Parts—  
Part I. Dynamics, 3s.  
Part II. Statics, 2s.  
Part III. Hydrostatics, 2s.

The portion of this book designated "Experiments" was for the most part in use for some time as a Practical Course for Medical Students at the Cavendish Laboratory at Cambridge. The rest of the book contains the explanation of the theory of those experiments, and an account of the deductions from them. It is with the hope of extending some such system as this in colleges and schools that the author has undertaken the publication of the present book and others of the Series.

## College of Preceptors Examinations,

*The Pitt Press Shakespeare for Schools.*

With Introduction, Notes, and Glossary by A. W. VERITY, M.A.

**Shakespeare.—The Merchant of Venice.** Seventh Edition. 1s. 6d.

"A perfect schoolboy's edition."—*School Guardian*.

**Shakespeare.—Julius Caesar.** Ninth Edition. 1s. 6d.

"Another of Mr. Verity's admirable school editions of Shakespeare's plays."—*Guardian*.

## Midsummer and Christmas, 1908.

*The Cambridge School History of England.*

**History of England for Use in Schools.**

By ARTHUR D. INNES, M.A., formerly Scholar of Oriol College, Oxford. In One Volume with 13 Maps and 8 Plans. Also in Three Parts: Part I., to 1509 A.D.; Part II., 1509-1714; Part III., 1689-1901.

Crown 8vo.  
Complete, 4s. 6d.  
Parts, 2s. each.

"A work of conspicuous merit and unquestionable value. . . . Though intended for the advanced forms of schools, it is well adapted for the private use of all manner of students, and, while never losing sight of the necessity of passing examinations, Mr. Innes has endeavoured to interest and guide the student rather than to cram him. His aim is comprehensive; for he seeks not merely to give an accurate chronicle, but to present history in its various aspects, constitutional, social, international, and biographical."—*Scotsman*.

### The Cambridge Series for Schools and Training Colleges.

"We heartily commend these books to the notice of teachers of elementary classics in whatever kind of school. It will be a long time before any more suitable edition will appear."—*School Guardian*.

The following editions have Complete Vocabularies:—

# CLASS LISTS

## OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—CHRISTMAS, 1907.

The list of successful candidates at the Colonial Centres will be published in the March number of "The Educational Times."

[Throughout the following Lists, bracketing of names implies equality.]

### PRIZES.

#### General Proficiency.

**FIRST CLASS [OR SENIOR].**  
Wellington College, Salop.

1. Hughes, A. G. (*Isbister Prize.*)
  2. Dodson, F. N. (*Pinches Prize.*)
  3. Allinson, A. P.
  4. Frazer, R. F.
- Hutton Grammar School, nr. Preston.
- Wellington College, Salop.  
Oakes Institute, Walton, Liverpool.

**SECOND CLASS [OR JUNIOR].**

1. Gieve, Miss G. M.
  2. Curtis, S. J.
  3. Hughes, R. G.
  4. Meadows, J.
- Crouch End High School, Hornsey.  
Kendrick Boys' School, Reading.  
Wilsford House School, Devizes.  
St. Olave's Grammar School, S.E.

**THIRD CLASS.**

1. Nokes, Miss C. M.
  2. Hitching, W. W.
  3. Goodchild, A. T.
  4. Winters, Miss D.
- Crouch End High School, Hornsey.  
Manchester Warehousemen and Clerks' Orphan Schools, Cheadle Hulme.  
St. John's College, Finsbury Park, N.  
St. Michael's School, Malton.

#### English Subjects.

1. Vickers, Miss K.
  2. Stott, Miss M.
- Westmorland Road School, Newcastle-on-Tyne.  
Girls' Grammar School, Levenshulme, Manchester.

#### Mathematics.

Oakes Institute, Walton, Liverpool.  
Oakes Institute, Walton, Liverpool.

#### Modern Foreign Languages.

Wellington College, Salop.  
The High School for Boys, Croydon.

#### Classics.

#### Natural Sciences.

Wellington College, Salop.  
Wellington College, Salop.

#### Taylor Jones Prize for Scripture History.

1. Bennell, Miss M.
  1. Brown, A.
  1. Hews, R.
- Crouch End High School, Hornsey.  
The High School for Boys, Croydon.  
Kendrick Boys' School, Reading.

#### Pitman Medals for Shorthand.

1. Keyse, C. C. (*Pitman Silver Medal.*)
  2. Sargent, Miss B. F. (*Pitman Bronze Medal.*)
- Bradley High School for Boys, Newton Abbot.  
Royal Masonic Institution for Girls, Clapham Junction.

The following is a List of the Candidates who obtained the FIRST and SECOND PLACES in each Subject on FIRST CLASS PAPERS. (Only those who obtained Distinction are included.)

#### Scripture History.

1. Bennell, Miss M.
  1. Brown, A.
  1. Guthrie, Miss E.
  1. Hews, R.
- Crouch End High School, Hornsey.  
The High School for Boys, Croydon.  
Ellerker College, Richmond Hill.  
Kendrick Boys' School, Reading.

#### English Language.

1. Bennell, Miss M.
  2. Davis, J. O.
- Crouch End High School, Hornsey.  
Monkton House, Cardiff.

#### English History.

1. Hughes, A. G.
  1. Pryor, H. L. L.
- Wellington College, Salop.  
Wilsford House School, Devizes.

#### Geography.

1. Vickers, Miss K.
  2. Roseby, R.
  2. Stott, Miss M.
- Westmorland Road School, Newcastle-on-Tyne.  
Eversley School, Stamford.  
Girls' Grammar School, Levenshulme, Manchester.

#### Arithmetic.

1. Dodson, F. N.
  2. Frazer, R. F.
- Hutton Grammar School, nr. Preston.  
Oakes Institute, Walton, Liverpool.

#### Algebra.

1. Graham, G. S.
  2. Blackman, W.
- Oakes Institute, Walton, Liverpool.  
Oakes Institute, Walton, Liverpool.

#### Geometry.

1. Jones, G.
  1. Frazer, R. F.
  2. Morris, A.
- Municipal Technical Institute, Portsmouth.  
Oakes Institute, Walton, Liverpool.  
The High School for Boys, Croydon.

#### Mechanics.

1. Frazer, R. F.
  2. Bates, J.
- Oakes Institute, Walton, Liverpool.  
The High School for Boys, Croydon.

#### Book-keeping.

1. Bennell, Miss M.
  1. Chester, D.
- Crouch End High School, Hornsey.  
Grammar School, Shoreham.

#### Mensuration.

1. Hughes, A. G.
  1. Bennell, Miss M.
  2. Luce, R. W.
- Wellington College, Salop.  
Crouch End High School, Hornsey.  
Jersey Modern School, St. Heliers.

#### French.

1. Arnaud, Miss C.
  2. Townson, C. H.
- Private tuition.  
Hutton Grammar School, nr. Preston.

#### German.

1. Seifert, J. H.
  2. Meyer, W. A.
- St. John's College, Finsbury Park.  
Wellington College, Salop.

#### Dutch.

1. Vogel, Miss F.
- Convent of the Holy Cross, Cala.

#### Latin.

1. Cooper, A. H.
  1. Nowill, J. C. F.
- Warner's College, Richmond.  
Wellington College, Salop.

#### Light and Heat.

1. Hughes, A. G.
  2. Allinson, A. P.
  2. Morris, H.
- Wellington College, Salop.  
Wellington College, Salop.  
Wellington College, Salop.

#### Magnetism and Electricity.

1. Dodson, F. N.
- Hutton Grammar School, nr. Preston.

#### Chemistry.

1. Coope, G. M.
  2. Hughes, A. G.
  2. Lyell, H. R.
- Hutton Grammar School, nr. Preston.  
Wellington College, Salop.  
Private tuition.

#### Natural History.

1. Belmar, Miss M.
  1. Godfrey, Miss N. G.
- St. Joseph's Convent, Castris, St. Lucia.  
The Red Maids' School, Bristol.

#### Drawing.

1. Gieve, Miss G. M.
  2. Allinson, A. P.
  2. Dodson, F. N.
- Crouch End High School, Hornsey.  
Wellington College, Salop.  
Hutton Grammar School, nr. Preston.

#### Political Economy.

1. Davis, B. L.
- Penistone Grammar School.

#### Shorthand.

1. Keyse, C. C.
  2. Sargent, Miss B. F.
- Bradley High School for Boys, Newton Abbot.  
Royal Masonic Institution for Girls, Clapham Junction.

#### Domestic Economy.

1. Stott, Miss M.
- Girls' Grammar School, Levenshulme, Manchester.

CLASS LIST — BOYS.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively:—

- |                         |                 |                                |                             |                           |
|-------------------------|-----------------|--------------------------------|-----------------------------|---------------------------|
| a. = Arithmetic.        | e. = English.   | h. = History.                  | ms. = Mensuration.          | sc. = Elementary Science. |
| al. = Algebra.          | f. = French.    | he. = Hebrew.                  | mu. = Music.                | sh. = Shorthand.          |
| b. = Botany.            | g. = Geography. | i. = Italian.                  | nl. = Natural History.      | sp. = Spanish.            |
| bk. = Bookkeeping.      | ge. = German.   | l. = Latin.                    | p. = Political Economy.     | tr. = Trigonometry.       |

**JOINT AGENCY FOR WOMEN TEACHERS.**

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools' Association.)

Address — 74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Hours for interviews (preferably by appointment) :—

11 a.m. to 1 p.m., and 3 to 5 p.m.  
Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

**THE JOINT SCHOLASTIC AGENCY.**

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies :—

HEAD MASTERS' CONFERENCE.

INCORPORATED ASSOCIATION OF HEAD MASTERS.

COLLEGE OF PRECEPTORS. TEACHERS' GUILD.

INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

ASSOCIATION OF TECHNICAL INSTITUTIONS.

ASSOCIATION OF PREPARATORY SCHOOLS.

WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments.

The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION.

Interviews (preferably by appointment) 12 p.m.—1.30 p.m., and 3 p.m.—5.30 p.m. Saturdays, 12 p.m.—1 p.m.

**LONDON INTER-COLLEGIATE SCHOLARSHIPS BOARD.**

ENTRANCE SCHOLARSHIPS AND EXHIBITIONS, 1908.

Messrs.

**TRUMAN & KNIGHTLEY,**

Educational Agents,

6 HOLLES ST., CAVENDISH SQUARE, LONDON, W.

Telegrams—"TUTORESS, LONDON."  
Telephone—No. 1167 Mayfair.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

**A.—EMPLOYMENT DEPARTMENT.**

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Prospectus, References, and full particulars will be forwarded on application.

1908.  
COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, W.C.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE APPLICATION OF PSYCHOLOGY TO THE  
WORK OF THE SCHOOL.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The First Course of Lectures (Thirty-sixth Annual Series) commenced on Thursday, February 13th, at 7 p.m.

The Course is meant to meet the needs of teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connection with the examinations for the Associateship, the Licentiate, and the Fellowship. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the classroom.

SYLLABUS.

I. (Feb. 13.) *Nature and scope of Psychology*: border-land between physiology and psychology; characteristics of consciousness; the psychological attitude of mind; the teacher's use of psychology; Professor Münsterberg's view; the intermediary between psychology and education; genetic psychology; experimental methods: child study.

II. (Feb. 20.) *Consciousness*: its fundamental character; its polarity; its insulation; "the general consciousness"; the ego or self; the subjective and objective; the unity of individual consciousness; meaning of the subconscious; advantageous position of educator as external influence.

III. (Feb. 27.) *Manipulation of Consciousness*: the various modes of being conscious; the so-called faculties: concentration and diffusion of consciousness; interest and attention; interaction between them; interest as means and as end; relation between the interesting and the easy; kinds of attention; physiological mechanism of attention.

IV. (March 5.) *Sense-perception*: nature of pure sensation; the senses, general and special; the essential mark of perception; the respective contributions of sensation and perception to knowledge; nature and scope of observation; its relation to inference; the gaping point; danger underlying the phrase "the training of the senses."

V. (March 12.) *Mental content*: the unit of mental content; the idea; laws of the interaction and combination of ideas; apperception; presented content and presentative activity; gradual modification of presentative activity; transitive and intransitive elements of thought; the static and dynamic view of the concept; the logical and psychological aspect of the concept.

VI. (March 19.) *Habit*: habit based on the laws of association; these laws not limited to ideas; association a general principle of organic development; place and value of habits in education; accommodation and co-ordination; the elimination of consciousness; convergent and divergent association; the continuum; reintegration.

VII. (March 26.) *Retention and recall*: physiological basis of memory; plasticity; memory not limited to intellectual process; personal identity; question of the possibility of improving the quality of memory; educational applications of mnemonics; learning by rote; obliviscence; element of purpose in memory.

VIII. (April 23.) *Imagination*: place of imagery in thinking; limitations imposed by images; importance of clearly imaged ends in ordinary life; practical applications in the schoolroom; the aesthetic imagination; cause of general suspicion of the "busy faculty"; scientific uses of the imagination; exact meaning of "picturing out"; relation of the imagination to the ideal.

IX. (April 30.) *Judgment and reasoning*: relation between logic and psychology; concept, judgment, reasoning correspond generally to term, proposition, syllogism; essential meaning of thinking is an adaptation of means to ends on the ideal plane; the purposive aspect of apperception; distinction between mere reintegration and thinking; the laws of thought as thought; the fundamental condition of all mental process: what underlies fallacies.

X. (May 7.) *Human nature*: general tendency to over-estimate the cognitive aspect; relation of knowledge to character; temperament the physical basis of character; classification of temperaments and of character types; advantages and dangers of such classifications; personality; permanency of temperaments and means by which they may be modified; types of troublesome pupils; treatment of the different temperaments in school.

XI. (May 14.) *The emotions*: value of the emotions in human life; like sensations they are subject to the law of relativity; emotions are to be utilized, not eliminated; cause of popular depreciation of the emotions; emotions are to be regulated by ideas; classification of the emotions; their expression; Lance-James theory of relation between emotion and its expression; element of truth in the theory and its great practical importance to teachers.

XII. (May 21.) *The will*: relation of will to feeling on the one hand and knowledge on the other; the appeal of the motive; fallacy of "the strongest motive"; resolution of the dualism implied in the process of making up one's mind; metaphysical exercises obscuring the problem of the freedom of the will; the evolution of the will in its relation to desire; the possibility of the training of the will; fundamental importance of the time element in this training.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

THE NORMAL PREPARATION TEST MAPS.

1d. each net. (Copyright.)

By REGINALD GILL, F.R.G.S., London Chamber of Commerce.

This New Series of Test Maps has been produced in order to provide a ready means of discovering the Geographical Knowledge of the Pupil. The form in which each Map is issued gives all Pupils, for the first time in Test Maps, an equal opportunity. In fact, the name list attached to every Map records the work attempted by the Pupil. The Material upon which the Pupil is required to show his knowledge accompanies each Map in such a manner as to obtain the fullest results.

UNIFORM WORK BY EACH SCHOLAR.

Instructions to Junior and Senior Students are provided, together with hints for suitably doing the work. Specimen lettering is included.

COLOURED TEST MAPS.

The Map is already coloured for the Student, so obviating this inconvenient process in School work.

OUTLINE MAPS SUPERSEDED.

Though not requiring the Pupil to complete the actual outline, the Normal Test Maps supply sufficient data in Art Colours to enable him to do the work. By this means the objection against all other Outline Maps that the Pupil has no practice in drawing the contour is removed.

THE SERIES INCLUDE:

**EUROPE:** British Isles and North Sea, England and Wales, Scotland, Ireland, France, German Empire, Italy, Balkan Peninsula, Russia.  
**ASIA:** India, **AFRICA.** **N. AMERICA.** **UNITED STATES.** **AUSTRALIA.**

Specimen Map free to Teachers.

A Key to the whole of these Test Maps is issued, entitled *The Sphere Atlas*, 1s. 6d.

Complete Catalogue post free.

## THE CAMBRIDGE HISTORY OF ENGLISH LITERATURE

Edited by A. W. WARD, Litt.D., Master of Peterhouse, and A. R. WALLER, M.A.

Volume I. of this work, FROM THE BEGINNINGS TO THE CYCLES OF ROMANCE, is now ready, price 9s. net, bound in buckram, or 15s. net. in half-morocco.

Volume II. THE END OF THE MIDDLE AGES, which will appear about Easter, will deal with *Piers Plowman*, Richard Rolle, Wyclif and the minor poetry and prose of their age not already dealt with in Volume I.; Gower, Chaucer and the Chaucerian school; the beginnings of English prose; and those of Scots literature (Huchoun, Barbour, James I., Henryson, Dunbar, Douglas, &c.); the work of the Westminster press; ballads; and the early days of public school, college and university life.

"It is not so much in the account given of the great lights of English literature as in the careful study of the whole subject, a study in which no details are omitted, that the value of the 'Cambridge History' is to be found. 'Beowulf' is known to everyone, but the minor poems that appear to be nearly contemporaneous with it are less familiar. And they give us glimpses of the everyday life on which the epics do not touch. The same characteristic will be found throughout the volume. The subject is treated with a completeness which gives to the work a unique value for purposes of study; this value is greatly enhanced by the bibliographies which, as in the 'Modern History,' supplement the text." *Westminster Gazette*.

### PRESS NOTICES OF VOLUME I.

"The enterprise conducted by Dr. Ward and Mr. Waller promises to achieve as notable a success as the 'Cambridge Modern History'. . . . The book can be read with genuine pleasure even by those who have but a slight knowledge of the subject. To the scholar it is simply indispensable."—*Tribune*.

"There is a satisfactory appearance of authority and weight about the first volume. . . . If future instalments are as worthy of the enterprise as this one, there will be no rivals for the work."—*Outlook*.

The work will be completed in fourteen royal 8vo volumes of about 500 pages each. Each chapter, so far as is possible, is the work of a writer specially familiar with the subject, while the Editors, Dr. A. W. Ward and Mr. A. R. Waller, are jointly responsible for the whole. The Volumes will be sold separately, and there is a special subscription price for the complete work in either binding, namely, £5. 5s. net for the buckram (payable in fourteen instalments of 7s. 6d. on publication of the separate Volumes), and £8. 15s. net for the half-morocco (payable in fourteen instalments of 12s. 6d.). *A Detailed Prospectus, showing the Contents of Volume I., and the scope of the other Volumes, will be sent on application.*

### **History of England from the Wars of the Roses to the Death of Elizabeth.**

For use in Schools.  
By ARTHUR D. INNES, M.A., formerly Scholar of Oriel College, Oxford.

Crown 8vo,  
with 3 Maps and  
Plan, 2s.

The complete work (The Cambridge School History of England) from which these chapters are taken, is published in three parts:—

Part I. To 1509 A.D. 2s. | Part II. 1509-1714. 2s.  
Part III. 1689-1901. 2s.

Or in ONE VOLUME, 4s. 6d.

"We have nothing but praise for this excellent text-book. The author has had in mind the needs of students at the Public Schools, roughly speaking between the ages of fourteen and eighteen, and their teachers. . . . Though written for Public School boys and teachers, the book will undoubtedly be most useful to the Preparatory Schools, and also to the general student."—*Preparatory Schools Review*.

"Mr. Innes, realising probably in how comparatively few schools European history is taught as the foundation of English history, gives in every case a distinct summary of the position of affairs on the Continent before attempting to describe our relations with them. Thus the international aspect of our history has received its due share of attention almost for the first time, and this alone should be sufficient to make the book welcome in our schools."—*The Practical Teacher*.

Press Opinions  
of the  
Complete Work.

### **The Two Books of the Kings, in the Revised Version.**

With Introduction and Notes by WILLIAM EMERY BARNES, D.D., Fellow and Chaplain of Peterhouse, Hulsean Professor of Divinity.

Fcap. 8vo,  
3s. 6d. net,  
or in 2 Vols.,  
2s. net each.

These volumes are issued in the *Cambridge Bible for Schools and Colleges*, under the general editorship of the Very Rev. A. F. Kirkpatrick, D.D., Dean of Ely.

The *Times* describes this series as one "which has done more to spread accurate Biblical knowledge among English-speaking people than any book except the Revised Version"; and the *Guardian* says that "it is difficult to commend this excellent series too highly."

### **The Theory of Light.**

A Treatise on Physical Optics. By RICHARD C. MACLAURIN, M.A., LL.D. In Three Parts.

Part I.

Part I.,  
Demy 8vo,  
9s. net.

The aim of the treatise, of which this volume forms the first part, is to give an account of the theory of physical optics that is systematic, and as complete as possible in the limits within which the author has thought it expedient to confine himself. He hopes that the foundation has been laid broadly enough to support the whole superstructure, and that the mode of treatment will make clear the relation between light and electricity, when those two sciences come into contact.

### **The Mathematical Theory of Electricity and Magnetism.**

By J. H. JEANS, M.A., F.R.S., Professor of Applied Mathematics in Princeton University.

Royal 8vo,  
15s. net.

The present book is intended to give the mathematical theory of the range of electro-magnetism which every student of physics may be expected to have covered, with more or less of thoroughness, before proceeding to the study of special branches of the subject. The range is very approximately that of Maxwell's original treatise; but while Maxwell's treatise was written for the fully-equipped mathematician, the present book is written more especially for the student, and for the physicist of limited mathematical attainments.

### **Modern Electrical Theory.**

By NORMAN ROBERT CAMPBELL, M.A., Fellow of Trinity College, Cambridge.

Demy 8vo,  
7s. 6d. net.  
(Cambridge  
Physical Series.)

"The object of this book is to deal with those phases of modern electrical theory which are most closely connected with its central problem, the relations of electricity and matter. Perhaps the most valuable chapters are those dealing with the electron theory, in which great care has been taken to distinguish between assumptions that are fundamental to the modern theory, and those that it may be necessary to abandon after further progress. We can warmly recommend the book to the study of both physicists and physical chemists."—*Oxford Magazine*.

The Educational Times.

*Education versus Decadence.*

MR. BALFOUR does not tell us by what train of thought the occasion of the Henry Sidgwick Memorial Lecture at Newnham led him to discourse on "Decadence."

Whether the cold shades of Opposition are depressing, or the adventurous policy of political adversaries inspires alarm, or "unsettled convictions" breed uneasy anticipations, or prosperity is wisely mindful of Nemesis, or—it is bootless to inquire. It is well, however, that a leading statesman, in a time of rising exports and imports, should be looking ahead and envisaging the possibility of a decline of the Empire. Analogies are always instructive, but they require very careful handling in order to draw from them their true import for different times and different circumstances. Even the Roman Empire, which has been so often pressed into comparison, does not readily furnish a plain and convincing lesson. Perhaps a direct inquiry, with the comparative method in subordination, might yield more fruitful results. In that case, one would expect that greater prominence would be given to Education as a preservative factor.

Indirectly, indeed, Mr. Balfour recognized the influence of education by laying great stress upon "the modern alliance between pure science and industry," and by placing emphasis "at least as much on the word 'science' as on the word 'industry.'" "If in the last hundred years," he says, "the whole material setting of civilized life has altered, we owe it . . . to the combined efforts of those who have advanced science and those who have applied it." This tribute to science might fairly be qualified; but, without questioning the material, or even the moral, results claimed for science, one must still conclude, as Mr. Balfour himself does, that all this "is but an aid to optimism, not a reply to pessimism." But education is wider than science pure and applied, and in its widest application it bears upon the question proposed for solution. "Under the Roman Empire," Mr. Balfour remarks, "education was well endowed, and its professors held in high esteem"; and yet the Empire declined and fell. Shall we infer that education would prove similarly ineffective for the maintenance of the British Empire? Or shall we inquire what was the part really played by educa-

tion in the Roman Empire, and what are the bearings of education upon the stability of the British Empire? We imagine that profound differences would emerge from such an inquiry.

The British teacher has very ample reason to magnify his office. He recognizes it as his duty not only to convey information, but also to train the mind and to mould the character of his pupils; and knowledge and character, we take it, are tolerably strong staves in the structure of a nation. In the regeneration of Japan, as in the regeneration of Prussia a century before, the foundations of the new life were laid in the reformed education of the youth. At the present moment the most progressive nations of the world look to education as the lever that is most essential, and absolutely essential, to raise them to higher planes of efficiency, not merely in the competitive struggles of industry and commerce, but in the moral qualities of manhood and citizenship. And the means to rise are necessarily the means to maintain a rise—the forces that are antagonistic to decadence. If education is deemed so important in countries under an absolute government, and in countries that are compact and all but self-contained it becomes vital in a country that is largely democratic, open to assault in all the quarters of the globe, and dependent for physical sustenance upon the open seas. Not progress only, but existence, is involved. The most directly operative and the most influential force against decadence in this country is knowledge guided by character; and the generation of this force, if not wholly accomplished in the schools, is yet the regular function of the teacher.

The importance of furthering the efficiency of our educational system, both by direct support and by removal of hindrances, thus stands out in striking relief. By slow and painful steps we have reached an expenditure of over eleven millions a year upon the elementary branches, and those that know the requirements best still ask for more. The higher branches are crippled sadly, and the Government grants go little beyond half a million; while technical education, if it needs considerable reform, yet also needs more support than a similar contribution. Sir Norman Lockyer, who has spoken up so valiantly and reasonably for something like adequate driving power, has just been telling the Association of Technical Institutions that "our educational organization

reminds one a little of Alice's wonderful tea party." The commercial side of education is also becoming more clamorous. A correspondent of the *Times*, after a long description of commercial intelligence and trade organization in Germany, sums up in these moving terms: "There is no doubt that this great and rapidly increasing peaceful army of trained commercial warriors, unequalled elsewhere in concentration of purpose and organized intelligence, is quietly effecting for Germany, and will in the future effect, more triumphs than can be achieved by the exercise of any weapons of war." Undoubtedly; and therefore we want the value of a "Dreadnought" to bring us to an equal, if not to a commanding, position. At the same time, it cannot be said that our business men have yet shown encouraging appreciation of the commercial training afforded in the newer Universities and other technical institutions. In other ways, too, we are handicapped not a little by traditional unintelligence or prejudice. Many parents and employers persist in clinging to child labour—though, indeed, in very many cases it is somewhat hard to blame parents, and sometimes, as things stand, even employers. Yet the situation is economically and nationally wasteful, and some remedy ought to be devised. Further, while agricultural education is fairly satisfactory in view of recent developments, the Secretary to the Board of Agriculture has reason to complain. "The number of students pursuing the longer courses offered by our colleges," he says, "is not so large as a few years ago promised to be the case; and it must be admitted that, in spite of inducements in the form of scholarships given by County Councils, and of the improvement in the quality of the instruction offered, the English farmer does not show anxiety to obtain systematic instruction in agriculture for his son."

The educational awakening is not yet complete. Meantime, in the fundamental sphere of elementary education, the energies that should combine for the good of the children and of the nation are painfully dissipated in ecclesiastical wrangles. The teacher, whose function is so vitally important for the national welfare, longs for peace, for security of tenure, for an adequate living, for independence of action. Let us hope. "A teacher," says Principal MacAlister, "cannot be a pessimist, he is seldom an optimist, but by the law of his existence he must needs be a meliorist." The recent teachers' meetings exhibit an interest and an energy that stand stiffly against decadence.

### NOTES.

THE provisions of the new Education Bill, which is not introduced as we write, will be public before our present issue is in the hands of our readers. Without being a prophet, or the son of a prophet, however, one may confidently anticipate the main lines of the proposals. There will be no public money apart from public control, and there will be no toleration of religious tests; except in so far as the inevitable denominational concessions may require. The suggestion of "contracting-out" has been condemned already by the National Union of Teachers. We have yet to see, however, what the method, if actually adopted, really

implies. On the face of it, the principle would seem to be practically the same as is happily operative in many other countries—indeed, in most other countries. The thing to be feared is that religious (or ecclesiastical) feeling has been so much exacerbated as to prevent, for the present, a reasonable solution. Political victors may insist on the political spoils: but the experience of other countries, as well as our own experience, teaches—what should not require teaching in these days—that force is not a remedy capable of securing a permanent settlement. As a correspondent truly says, and as the course of the controversy has shown, "a partial settlement of the question would be a Pyrrhic victory."

PROF. SADLER, writing to the *Times* on Mr. McKenna's Sunday speech, acknowledges that the President of the Board of Education justly emphasized the part played by departmental regulations under successive Governments in the building up of secondary education and of the training colleges in connexion with the State. "But," remarks Prof. Sadler, "he did not point out that such changes by regulation have won the permanent approval of the public in so far as they have sought to establish a fair balance between denominational and undenominational effort in English education." After quoting provisions of the new regulations "committing the State, which should be impartial, to a one-sided view of what is educationally good for the nation," Prof. Sadler writes:

The point which I would respectfully submit to the consideration of the Government is that English education is the better for combining denominational and undenominational elements in its structure. Each element makes its contribution to the welfare of our educational life. Each gives to it something that the nation needs. Is it not desirable, therefore, that the State should recognize the value of both kinds of effort? Should not the State help each to attain a high level of excellence in teaching and hygiene? And is not the true moral of the chapters in our educational history to which Mr. McKenna referred on Sunday, that the administrative action of the Board of Education is most acceptable to the country when it endeavours to foster, among the friends of denominational and of undenominational schools alike, a desire for unity of effort in the public interest—a unity which is not the less real and fruitful because it expresses itself in different forms of educational method and of spiritual appeal?

The worst of it is that, so long as a well grounded sense of unfairness exists, energies that should go to "unity of effort in the public interest" are only too likely to be wasted in internecine conflict.

It is rumoured—if it is worth while to give heed to rumour—that the forthcoming Irish University Bill provides for the reconstitution of the Royal University as a teaching as well as an examining institution, with an endowment of £30,000 per annum in addition to the £20,000 already given; for the affiliation of the Queen's Colleges of Cork and Galway and University College, Dublin (an institution managed by Jesuits); and for liberty to Queen's College, Belfast, either to join or to become a separate University. The voice of rumour is, indeed, very like the voice of Provost Traill at Manchester. The Provost stated that he had "received from Mr. Birrell the positive assurance that in the proposals which he hopes to be able to lay before Parliament, Trinity College, its constitution, and its endowments are absolutely excluded": that is to say, the essence of Mr. Bryce's scheme has evaporated. The Provost went on to say that, in his own personal opinion,

Trinity should be reformed "from within if possible," and that there should be created in Belfast a University founded on the existing Queen's College, as well as another University embracing the Roman Catholic College on St. Stephen's Green, together with the Cork and Galway Colleges, each of these two Universities to have "an atmosphere of its own, decided by the majority of its students." And he clinched this personal opinion by adding the assurance that "it is upon lines of this character that the Chief Secretary is proceeding." If this is so, then the Chief Secretary will need all his powers of conciliation to effect a permanent settlement of the question.

A WRITER in the current number of *A.M.A.*, discussing conflicting views on "Moral Instruction versus Moral Training," puts the following three questions:—

(1) Is not Dr. Hayward quite right in his contention that character can be influenced, as against those who assert the contrary? (2) Is not Mr. Paton's attitude equally right—that moral training is more important in school life than moral instruction? (3) Has not the whole question of moral instruction been plunged into unnecessary confusion owing to the failure of those who have discussed it to see that there is a vital difference distinguishing the problems of primary from those of secondary education?

All three questions he answers in the affirmative. It is now for Dr. Hayward, he goes on to say, to look at the question from the secondary-school master's point of view, and to answer this one question: "Is direct moral instruction more effective than indirect moral training at the secondary stage?" The terms and the sphere of discussion should have been made quite clear at first, and the discriminations now made will probably simplify the problem. It is not so evident, however, that the final challenge to Dr. Hayward is couched in conclusive form. Still, as the challenger says, "if he can give an answer upon this straight issue, we, as secondary-school masters, will at least have something definite to go upon."

THE Women's Department of King's College, London, which is located at Kensington, will open next autumn a post-graduate course of training to women students in household economics, "analogous to the courses of special or professional training already provided for men and women which connect themselves in growing measure with the curriculum of the Universities." The course will aim not merely at the equipment of future teachers of domestic science, but at the broader needs of such as propose to engage in various forms of social and philanthropic work. As a scheme for systematic training on scientific lines, the project deserves a cordial welcome, and we wish it all success. We cannot, indeed, help thinking (in an old-fashioned way, no doubt) that the first accomplishment of a girl-graduate is to be an expert domestic administratrix; and it is not easy to comprehend why she should have much, if anything, to learn on the subject in post-graduate days. Still, we fear, she often has gaps in her knowledge. But let us be practical, at all events: it should not be considered necessary to make the students expert chemists, physiologists, architects, plumbers, and so forth (though some exception might well be made in favour of expert plumbers, if such an educational product be really feasible). The tendency seems to be to overdrive new subjects. On the wider matters of social and

philanthropic work there is certainly much that needs learning—and criticism.

WE have not a little satisfaction in acknowledging and recording the following expert appreciation of the hygienic section of the lectures and discussions at the recent Winter Meeting of the College of Preceptors. We quote from the *Medical Press* (January 22):—

The late Mr. Spurgeon, when speaking of the religious efforts made to reach different strata of the community, was wont to speak of "the neglected upper classes," and, applying the simile to the efforts now being made to bring the care of children and the hygiene of schools to public notice, we cannot but feel that the children of the poor are being affected far more by diffusion of knowledge on these subjects than are the children of the upper classes. True, school hygiene is penetrating some of the large public schools; Dr. Clement Dukes, who was a school hygienist before school hygiene was "discovered," has done yeoman work at Rugby; Canon Lyttelton has sensible ideas to inculcate in his new sphere at Eton; and University College and King's College Schools, in their respective new surroundings, both bear traces of the hand of the reformer. But in the private preparatory and secondary schools the light of the new gospel has yet to dawn, and we welcome very heartily the excellent efforts made by the College of Preceptors to bring it to the masters and mistresses engaged in those spheres by incorporating lectures by well known teachers on such subjects as the care of school children's eyes, the hygiene of the ear and throat, and the training of the voice, into their meetings for teachers in the winter. The session of these vacation lectures has just closed, and we feel that the instruction therein given cannot but have a far-reaching effect. There is no reason why the upper classes should be "neglected," and we congratulate the College of Preceptors on its far-sighted wisdom in providing such courses. The principle is capable of almost indefinite extension.

## SUMMARY OF THE MONTH.

THE Education Bill is being introduced in the House of Commons just as we go to press.

THE Executive of the National Union of Teachers have unanimously passed the following resolution:—

That, in view of the probability of the forthcoming Education Bill containing clauses which would enable non-provided schools to be withdrawn from the control of the Local Education Authorities and from the benefit of rate aid, the Executive of the National Union of Teachers wish to protest in advance against any such proposals, and to affirm that, in the opinion and experience of teachers in such schools generally, such contracting-out would be fatal to the efficiency of the schools and injurious to the health, comfort, and education of the children. Further, in the opinion of the Executive such a proposal, if carried, can only lead to the indefinite postponement of the adoption of a national system of education.

THE ARCHBISHOP OF CANTERBURY presided (January 30) at the Annual Meeting of the Canterbury Diocesan Education Society, held at Faversham. He said that a vast multitude of the English people were convinced that we could not preserve religious force at its best, either for the teachers or the children, unless that religious force was connected with some great religious society or organization, and in this connexion he combated the notion that public interest in the denominational side of elementary teaching had been shown, by the falling off in the support given it, to have waned. In 1871 the amount subscribed for the maintenance of Church schools connected with the National Society was roughly £343,000; in 1881 £582,000, in 1891 £602,000, and in 1901 £648,000. Surely it was impossible that any settlement of the education controversy could be fair or could be permanent unless it accorded reasonable recognition of that conscientious principle which had been marked in so practical a way. There were many possible ways of recognition, and he (the Primate) had declared his readiness to meet more than half-way any reasonable approach to that recognition, but the exact manner in which that recognition was to be given must be left to the Government. He confessed to be exceedingly anxious on the subject at present, because recent administrative action by no means tended to what he had always thought was a Liberal principle—the recognition of conscientious convictions when they were thus publicly, and over wide areas, and prominently set forward. Perhaps the best object-lesson was to be found in what had hap-

pened in regard to their training colleges. When the Bill of 1899 was under discussion, it was regarded as impossible that any Minister of Education would ever use for partisan ends the supervisory powers then first given to him. The President had told them the Regulations were temporary, but the annual report of the Board had no reference to that. The difficulty about the trust deeds could not be got over without submitting them to the Board for alteration; it was almost like asking the counsel for the prosecution to act also as judge. There might not be any desire to cut about and tamper with the documents; but the risk was there. There was also danger that the pressure of the secular subjects might reduce the attention to religious teaching, and then what became of the object for which the colleges were founded?

The first meeting of the General Council of Church of England Training Colleges, which has been called into existence through the emergency created by Mr. McKenna's regulations respecting the admittance of students to these institutions, was held (February 3) at the offices of the National Society. The Archbishop of Canterbury, President of the Council, was in the chair, and there was a large attendance of representatives of training colleges in all parts of the country. The Council, while strongly indicating the impossibility of accepting Mr. McKenna's suggestion to alter the trust deeds so as to suit the regulations, also showed its wish to make all provision that can be made to meet the needs of Nonconformist students, so long as this can be achieved without defeating the essential purpose for which the Colleges exist. An Executive Committee was appointed, and the following resolutions were adopted:—

This Council approves the action taken by the representative Training College Conference on December 6.

The fact that the Church of England training colleges have been established on the fundamental principle that religious life and character are essential qualifications for the teacher of the young, and that the new Regulations of the Board of Education require the college authorities, in selecting candidates, to have no regard to religious faith or the willingness or otherwise of a candidate to receive religious instruction or to attend religious worship or observances, appears to this Council to render it impossible for such a training college to apply for a scheme which would be inconsistent with those fundamental conditions.

The Council, as representing Church of England training colleges, fully accepts the principle, already largely acted upon, of a conscience clause for Nonconformist students, provided that the arrangement, whether secured by a hostel system or otherwise, be not such as to interfere with the general discipline and with the religious life and character of the college as a whole.

The Executive Committee of the Northern Counties Education League have passed unanimously the following resolution on Regulation 43 of the Regulations for Secondary Schools:—

That the Northern Counties Education League deplores the action of various Education Authorities in asking the Board of Education to waive the Regulations which the Board has imposed as a condition for making increased grants for secondary schools. The League trusts that Local Authorities will insist on adhesion to the following principles—namely: (1) Representative control of the expenditure of public money; (2) the non-imposition of religious tests in schools which receive the increased grant; (3) the provision of an adequate number of free places for poor children in all schools receiving the grant.

In memoranda addressed to the President of the Board of Education by the Council of the Teachers' Guild of Great Britain and Ireland, the Council states, in connexion with the question of the tenure of head and assistant teachers in endowed schools, that in view of the recent decision of the Court of Appeal in the Richmond School case, it desires to express its strong objection to tenure clauses as they are at present drafted in schemes for endowed schools, and desires to urge the introduction by the Government in the coming Session of a Bill providing for the introduction of improvements of tenure into all future schemes, and for the revision of existing schemes in the same sense.

In a series of resolutions indicating necessary improvements in the matter of tenure, the Council urges that "a permanently appointed assistant master should only be dismissed by the governing body at the instance of the head master. A right of appeal, on the part of either the head master or the assistant, should in all cases lie from the governing body to the Board of Education, and no assistant mastership should, *ipso facto*, terminate in consequence of a change of principals."

In a memorandum respecting the recently issued regulations for secondary schools, the Council of the Guild expresses regret

that the clause dealing with the appointment and dismissal of head masters makes no provision for the appointment and dismissal of assistant teachers. With regard to the clauses governing the question of religious instruction in secondary schools, the Council expresses approval of them, holding that, while they free State-aided schools from undue dogmatic limitations, they will not interfere with the giving of special denominational instruction when there is a desire for it.

The Council expresses the opinion that the new Teachers' Registration Council should be composed of not fewer than twenty and not more than thirty members, that the representatives of the Crown should not exceed one-fifth of the total membership, that teachers on the register should be represented directly through their own votes, and that the Registration Council should be empowered to act as a court of appeal in cases of dismissal, whether of heads of assistants.

In the House of Commons on February 12, in reply to Mr. Masterman, Mr. McKenna said: A training college which fails to comply with the new regulation requiring students to be admitted without regard to religious belief or social antecedents will be liable to removal from the list of colleges recognized as eligible to receive Government grants. It may, however, after removal from the list, continue to be accepted by the Board as a place suitable for the training of teachers for public elementary schools if the Board are satisfied as to its educational efficiency, and students attending it may in that case be admitted to the Board's examination on the same conditions as students who are trained in recognized colleges, and will be eligible in that way to become certificated teachers, though no grants can be paid on their account. Arrangements will be made, when occasion arises, for the establishment of a list of certified training colleges (on the lines of the Board's list of efficient secondary schools) which would comprise all the training colleges, both grant-earning and non-grant-earning, recognized as efficient by the Board of Education.

In answer to Sir W. Anson, Mr. McKenna said: A considerable number of resolutions passed by Local Education Authorities under Article 43 of the Regulations for Secondary Schools have reached, and are still reaching, the Board of Education. The total number of Authorities from whom such resolutions have been received is thirty-six. Some of these resolutions have already been considered by the Board, and they have thought fit in the case of fourteen schools to waive one or more of the conditions imposed by the new regulations for 1907. They have not thought fit to waive any of the conditions referred to in the resolutions as regards three schools at Southampton, Bury, and Peterborough respectively. The greater number of the resolutions are still under consideration, and a full return showing for each school the articles which the Board were asked to waive, and their decision as regards each article, will be laid before Parliament when the process is complete. It is hoped that the return will be ready in the course of April.

The new volume of Statistics of Public Education in England and Wales in 1905, 1906, and 1907, issued by the Board of Education—practically a statistical appendix to the Annual Report of the Board of Education for 1906-7—is divided into three parts: (1) a list of Local Education Authorities, (2) educational statistics, and (3) financial statistics. On August 1, 1907, the number of Local Education Authorities in existence was 328. On August 1, 1906, out of a total of 7,236 Council schools, 6,980 were elementary schools, accommodating 3,520,093 children, the total number of pupils being 3,543,760. The non-provided schools numbered in all 13,671, with accommodation for 3,524,881 children. Of these schools 13,487 were elementary, with places for 3,492,432 children. These figures show a grand total of 20,907 schools and 7,068,641 school places. The non-provided schools are divided into five groups, the Church of England being credited with 11,377 schools and 2,743,876 places, the Roman Catholic Church coming second with 1,064 schools, containing accommodation for 411,360 children. Wesleyan schools number 345, with 129,350 places, and Jewish schools 12, with 11,358 places. The undenominational and other schools number 689, with accommodation for 196,480 pupils. During the period from January 1 to July 31, 1906, 112 voluntary schools were transferred to Local Education Authorities. While the Council elementary schools have increased in number voluntary schools have decreased. Of the special schools, those for the blind and deaf have decreased and those for defective

and epileptic children increased, the dates of comparison being in each case January 1, 1906, and August 1, 1906. From statistics of the expenditure of the Board of Education out of the Parliamentary vote, it appears that for the year 1906-7 the total cost, after deducting appropriations in aid, was £13,165,338, as compared with £12,604,048 in the preceding year. Of this sum the grants in respect of elementary education accounted for £11,248,794. The average salary of the 13,642 male head teachers in August, 1906, was £163; but there were over five hundred male head teachers with salaries of over £300 per annum. The average salary of the 17,617 female head teachers was £112, there being only 16 with salaries of over £300. The average salary of the 15,498 certificated male assistants was £116; but more than two thousand of these were in receipt of salaries exceeding £150. The average salary of the 36,787 certificated female assistants was £84, of whom only a hundred were being paid more than £150.

THE recent return issued by the Board of Education showing the cost of higher education in England and Wales during the year ending March 31, 1906, contains particulars of the application of funds by Local Authorities to the purpose of education other than elementary under the Education Act, 1902, the Welsh Intermediate Education Act, 1889, the Public Libraries and Museums Acts, and Local or Private Acts. The return comprises also information as to expenditure upon secondary education—including not only secondary schools, but also the instruction of pupil-teachers and intending pupil-teachers—the training of teachers, the provision of scholarships, evening schools, and the various forms of technical instruction, and higher education in science and in art generally. The income from all sources available for meeting the year's expenditure showed a total increase, as compared with the previous year, of rather more than £750,000, and the increased amount raised from rates was equivalent to about two-thirds of this total. The total income other than from loans of Local Education Authorities was £3,518,178 and expenditure £3,355,433, compared with £2,757,886 and £2,889,871 respectively in the previous year. The total expenditure during the year in the Administrative County of London for secondary schools, including pupil-teacher centres and preparatory classes under the Board of Education, was £211,004. For evening schools, institutions for higher and technical instruction, &c. (not including the training of teachers), the total was, for the Administrative County of London, £367,825.

THERE is a short but pointed indictment of the English farmer in the annual report published on the Board of Agriculture's distribution of grants for agricultural education. "It is true," says Mr. T. H. Middleton, Secretary of the Board, "that there has been of late years a gratifying change in the attitude of the farmer towards the teaching staff of agricultural institutions, but this attitude has not yet reached the point at which it affects the farmer's personal desire for education. Many farmers are now ready enough to admit, by their action on Education Committees, if not in so many words, that education is a good thing for their neighbours; but the Agricultural Committees will not take the place in our system which we wish them to occupy until farmers are convinced that education is a good thing for themselves." In last year's report it was estimated that between thirty and forty thousand persons annually received agricultural instruction of some kind, and that 1,116 attended courses at agricultural institutions. Last year the number attending these institutions was 1,121. "While these figures are satisfactory," comments the Secretary, "the number of students pursuing the longer courses offered by our colleges is not so large as a few years ago promised to be the case, and it must be admitted that, in spite of inducements in the form of scholarships given by County Councils, and of the improvement in the quality of the instruction offered, the English farmer does not show much anxiety to obtain systematic instruction in agriculture for his son." It is suggested that much larger sums should be expended by the Board in promoting research on agricultural problems. The amount of the residue grant which was applied in the counties to agricultural education in 1906-7 was £79,805, this being exclusive of about £4,000 received by Leeds University from the three Ridings of Yorkshire: £23,596 went in grants to colleges and schools, £12,066 for dairy instruction, £9,536 for horticulture, and £9,353 for scholarships. The total expenditure of institutions aided by the Board of Agriculture was £38,794.

The tenth Annual Meeting of the Moral Instruction League

took place (March 10) in the Medical Examination Hall, Victoria Embankment, Sir Edward H. Busk, M.A., LL.B. (a Vice-President of the League), presiding. The annual report recorded considerable progress. About one Local Education Authority out of every six had now some provision for systematic moral instruction in its schools. The Authorities of Buckinghamshire, Devonshire, Chester, and Swansea had adopted during the year the League's Graduated Syllabus of Moral and Civic Instruction for Elementary Schools. Several other Authorities, including several Scottish School Boards, had also taken action in the League's direction. The League had also exercised considerable influence internationally, important Leagues on similar lines having been constituted during the year in Germany and the United States of America. The League had published during the year a Graduated Syllabus of Moral and Civic Instruction for Secondary Schools. It had entered into a contract with a leading firm of educational publishers to complete within eighteen months a series of teachers' handbooks to illustrate all the standards outlined in its Elementary Syllabus. The membership of the League had considerably increased.

Sir Edward Busk said that the arguments used against the methodical teaching of ethics might be grouped under three heads. First: the number and diversity of the theories of ethics. There was undoubtedly difference enough, but this was of a philosophical rather than of a practical character. All writers on the subject admitted the authoritative character of a moral judgment; there was, therefore, an agreement upon the practical side of morals. A second objection was based upon the varying standards of the good and the bad in different countries and in successive epochs. Our everyday experience, however, was that no action by itself was either good or bad, but good when the higher of the two alternatives known to the agent was selected, and bad when he chose the lower of the two of which he was cognizant. As mankind advanced, higher and higher motives of action became known, so that what at a lower stage of development might have been the highest known spring of action became one low down on the advanced scale, and its selection instead of the other possibilities was reprehensible. If this were the true explanation of moral judgment, it afforded the highest justification of the necessity for systematic moral instruction. The third objection was the alleged difficulty of treating of the imperative nature of duty without assuming some sanction, either supernatural or natural. Upon this it might be remarked that if actions were chosen from fear of consequences, the resulting conduct is prudent rather than moral, and that no one will need the stimulus of a system of rewards and punishments who is penetrated with the spirit of morality, and turns naturally to the true and noble and shrinks from the baser thoughts and actions.

Prof. Mackenzie directed special attention to two main difficulties felt in connexion with the giving of systematic moral instruction in schools. The first difficulty was the conflicting moral ideals that prevail in the community. He thought that there were various ways of dealing with this difficulty, all of which had a certain value. Some urged that it would be well to distinguish between the good citizen and the good man, and to confine efforts in moral instruction mainly to the development of the former. Others urged that there should be recognition of the common elements in divergent ideals and that endeavours should be made to limit instruction to these; that in any case a serious attempt should be made to discover an underlying unity in the ideals that seem to conflict. He admitted, of course, the possibility of difference of opinion on certain points, but held that a certain latitude should be permitted here as was commonly done in regard to history, literature, and other subjects of the school course; and he was further of opinion that discreet references to these existing differences of opinion would stimulate reflection on the children's part and prevent mechanical and dogmatic methods of instruction. The second difficulty was that of finding suitable teachers for giving efficiently such important instruction. He pointed out, however, that this difficulty was not created by the introduction of moral instruction into the curricula of schools, but had only thus been brought to light, and that it was imperative that this difficulty should be met by greater care being devoted to the training of teachers, and that, further, the school itself should be more systematically organized to this end.

MR. BARROW CADBURY announces his desire to dedicate his old home, Uffculme, near Birmingham, to the memory of his father, the late Mr. Richard Cadbury, by devoting it to the promotion

of adult school work, to which Mr. Richard Cadbury gave a large part of his life. Mr. Barrow Cadbury states that his wife and he have been impressed by the need of some place within easy distance of Birmingham to which members of adult schools, children's school parties, and kindred bodies may resort. They propose to equip the house as an adult school hostel, which will afford accommodation for visitors to conferences and similar gatherings, and twenty-eight acres of the surrounding park will be set apart for school parties, mothers' meetings, &c. The large hall and chalet adjoining will be at the disposal of parties, and teas and other refreshments will be obtainable at popular prices. The idea of the benefactors is that parties, provided they are sufficiently large, should have the freedom of the grounds for their exclusive enjoyment, making their own arrangements according to their bent. It is not to be a public park, and admission will be regulated by ticket. This scheme is to be developed experimentally for four or five years.

A SERIES of examinations in hygiene has been promoted and organized by the Incorporated Institute of Hygiene of London (34 Devonshire Street, Harley Street, W.), which should stimulate the acquisition of knowledge in regard to those important subjects which affect the health and well-being of the people and which may be expected also to have most beneficial and far-reaching results on the physical fitness of the race. These examinations will be held at the leading centres throughout England, Scotland, and Ireland, and are of special interest to ladies, as they will include not only the necessary examinations showing general proficiency in hygiene, but the following additional Honours subjects:—The Hygiene of the Home, The Hygiene of Motherhood, The Feeding and Rearing of Children, Food and Cooking, Home Nursing and First Aid, School Hygiene, Physical Training. An examining board, composed of some of the leading physicians and scientists throughout the country, has been formed to further this branch of the educational work of the Institute of Hygiene, and every assistance and encouragement will be given to candidates—who may carry on their studies at school, college, or at home—while they will receive the Certificate of the Institute for proficiency in elementary knowledge and the Diploma of the Institute for proficiency in advanced knowledge, should they pass the examination successfully.

THE Annual Report of the Oxford University Extension Delegacy states that during the past session 1,276 lectures, distributed in 178 courses, had been delivered by 40 lecturers at 138 centres; 22,421 students were in regular attendance at the lectures, and 6,900 students at the classes held in connexion with the lectures; 824 candidates entered for examination, of whom 774 passed, 284 with distinction. These figures show little variation from those of recent years. Fifty-one students' associations were at work and 360 meetings were held. The summer meeting this year will be at Cambridge, and the delegates propose to arrange a meeting at Oxford in 1909.

THE total number of candidates entered for the Cambridge Local Examinations, held in December last, was 13,038, exclusive of 2,544 candidates examined at colonial centres. In the Senior Examination 891 boys and 1,313 girls passed, 116 boys and 9 girls being placed in the First Class. Sufficient merit was shown by 464 boys and 165 girls to entitle them to exemption from one or both parts of the Previous Examination. Of the junior candidates, 2,407 boys and 1,685 girls passed, the numbers placed in the First Class being 262 and 43 respectively. In the Preliminary Examination 1,584 boys and 1,171 girls satisfied the examiners.

THE Annual Report of the London University Extension Board on the work of last session (1906-7) states that the number of courses delivered was 172, the number of entries 13,803, the average attendance at classes 5,541, the average number of weekly papers 1,559, and the number of certificates awarded 1,100. Successful endeavours are being made to interest Londoners in the history and architecture of London, and also in sociology and local government. Over a thousand workmen attended the artisan course by Prof. Masterman in Westminster Abbey last summer. The Government have agreed that Westminster Hall shall be used for similar lectures this summer,

when much larger audiences are anticipated. A new development in extension work is the course of continuous study in the humanities, extending over five years, for the Chancellor's certificate.

THE Report of the Girls' Public Day School Trust states that the Council closed the Gateshead School in July and the York School in December last, and the number of schools is therefore now 31. Including £4,460 brought forward, the accounts show a gross profit of £11,085. After providing £3,013 for depreciation on premises and furniture (schools and office)—including additional amounts specially written off—the amount available is £8,072. The Council propose to pay on March 4 interest at the rate of 4 per cent. per annum, free of tax, which is estimated to require £5,998, and to carry forward £2,074. The grants from the Board of Education for the year ended July 31, 1906, amounted to £8,238. Those for the year ended July 31, 1907, amount to about £9,000, payable in instalments. Of this amount £3,802 has been received.

THE first meeting of the Bristol Branch of the English Association this year was held (February 7) at University College, Mr. J. H. Fowler in the chair. The report for last year was very satisfactory. The membership had increased to 65, and, in addition, a number of members of other societies had availed themselves of the opportunity of attending the meetings. A paper on "The Teaching of Composition in Higher Forms of Secondary Schools" was read by Mrs. Meyrick Heath, and discussion followed.

THE College of the City of New York on Washington Heights, which has been under erection since 1903, is (says the *Sphere*) almost ready for occupation. Indeed, some portions of the five great buildings, which have cost from first to last something like £1,000,000 sterling, have been in use more than two years. The institution is sixty years old and began in what was formerly known as the old Free Academy. It is built of gneiss, brightened by white terra-cotta for the decorative details. All the five portions of the group are connected by wide and airy underground passages through which students (of which the college can accommodate four thousand) may pass in stormy weather. The central hall—90 ft. high, 90 ft. wide, and 180 ft. long—is likely to be one of the show places of New York, for it will be used not only as a chapel and place of assembly for the institution, but also as a place for great municipal functions. The great stained glass windows, into which are set the seals of all the important colleges of the United States, reach almost to the roof. It will give some indication of the size of the place when it is stated that the chemistry building has twelve laboratories for general work alone, besides many smaller ones for special work. It is proposed later on to increase the usefulness of the college by establishing night classes.

THE remarkable progress accomplished by the Japanese during the last thirty-two years in the field of public education is brought out very clearly (says *Nature*) in the Thirty-second Annual Report of the Japanese Minister of Public Instruction, which has been published recently. This report deals with the year 1904-5, the date of the war with Russia. It is instructive to note that this time of stress was allowed to interfere in no way with educational activity. The Emperor, indeed, proclaimed it to be a national duty that the zeal and efforts of educational administrators and teachers should be redoubled. Despite the financial difficulties to which a great war gave rise, the expenditure on education was not diminished. While in 1873 only 28 out of every 100 children were under instruction in public schools, the ratio had risen in the year under review to the remarkable one of 97 boys and 91.5 girls out of every hundred; and the number of children in the schools had reached 7,551,445. Higher education, too, was in an equally flourishing condition. For example, the number of students in the University of Tokyo had reached 3,500, and in Kioto 1,300. Numerous special schools, technical schools for engineers and for agricultural specialists, medical schools, and schools for the study of modern languages, were all in a high state of efficiency. Moreover—a point of special interest in our country to-day—the hygiene of schools is scrupulously watched, and medical officers are charged specially with the duty of keeping the pupils under examination. Altogether the report provides abundant evidence of the success with which Japan is educating her people.

## UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

Oxford. THE term so far has shown an extraordinary lack of vitality. Everything has moved in an unusually humdrum fashion. There have been no wars or rumour of wars, and for the time being Greek and the threatened revival of the Ladies' question have been shelved. There has, indeed, been some writing and discussion of the "Three Years' Proposal"—a scheme intended doubtless to compete with the system in vogue at Cambridge and to simplify matters for the would-be Civil Service candidate, but it is very doubtful whether the proposal will take definite shape. After all, it is not the main business of the University to adopt Cambridge methods; nor yet, again, solely to cater for the Civil Service candidates. As it is, Oxford men have not failed to any conspicuous degree in the examination.

Even over the election to the Boards of Faculties there has been little excitement and practically no opposition. The "relief fund" for the University does not seem to have so far reached the amount which optimists prophesied when our new Chancellor first put his name to the appeal; at the same time the consciences of some of the Colleges (and their bursars) have been pricked, and various promises have reached the Vice-Chancellor of temporary or permanent assistance in various departments of the University. Whether these offers have been dictated by natural generosity or by prudential considerations of what might happen if a new Commission were appointed by Parliament, does not matter; it is, at any rate, a good thing that Colleges should regard extra-parochial considerations and show themselves alive to the "needs of the University."

After all the fuss which was made over the Oxford Pageant and all the rumours which were rife that the financial outcome was disastrous, it is satisfactory to note that, after long negotiations with sundry claimants, the promoters have been able to produce a considerable balance, and some Oxford charities will benefit though not to the extent which had been foretold: there is no doubt that the organizers were rather lavish in their expenditure. We have lately enjoyed a somewhat boisterous Torpid week, and Christ Church have achieved a record by going head and then followed up their success in the Eights. They have had the assistance of two freshmen—the younger Gladstone and Majolier, both of whom were in the Trials, while the latter seemed likely to find a seat in the Varsity Eight.

Talking of the Eight reminds us that the experts now tell us that we have a very good chance this year of defeating Cambridge in spite of the skill of Mr. Stuart as stroke: at present the crew are fast, though rather short: they have been handicapped by the absence—owing to the prevailing epidemic—of Kirby, the President. We have won the Association Football match and lost the Hockey: the Sports, despite rumour that several of our runners are "crooked," look on paper a good thing for us. The Golf match seems an open thing, and neither side is equal to some of its recent predecessors. The O.U.D.S. began their week's performances of the "Midsummer Night's Dream" on Thursday, and we are told to expect an elaborate presentation.

(From our own Correspondent.)

Cambridge. It is the season of benefactions. To begin with, the late Sir William Pearce has enriched Trinity to the extent of at least a quarter of a million, though the actual sum was at first stated to be somewhat larger. The late Baronet was one who thoroughly appreciated University life, and was a loyal member of the great College to which he belonged. It is not often possible to determine the reasons which have prompted testators to make vast charitable benefactions, but it is, at any rate, to be recorded that twenty-five years ago Sir William Pearce was reading an ancient volume—Westcote's "View of Devonshire"—when the following statement caught his eye: "Nicholas Wadham, Esq., married Dorothy, daughter of Sir William Petre, Kt., Principal Secretary of State to Queen Mary and of her Privy Council, and died sans issue [save that they left behind them an issue better than of sons and daughters—viz., Wadham College in Oxford, their most noble offspring, which will convey their name and memory fragrant to all future generations]." Who knows but that this was the suggestion which caused the welcome benefaction to Trinity?

The archaeological museum also has profited to the extent of £4,000 through the generosity of a Cambridge family, the Fosters, who have been well known here for generations. This

gift has been made in memory of one of the family, Mr. W. K. Foster, who died recently.

The scheme for starting an examination in architecture has met with buffets from within and without, chiefly the latter; but Cambridge people are beginning to think that they can manage their own affairs, at any rate in educational matters, and perhaps the scheme will pull through after all. One of the most experienced members of the syndicate is unfortunately *hors de combat* through ill-health, Mr. Cranage, the Secretary of the Local Lectures, having to go away to the South of France in search of health and strength.

The Porson Scholarship has fallen to Mr. J. R. M. Butler, the youthful son of the Master of Trinity. This early genius seems to win scholastic distinction much as other people pick apples. As this is the second University distinction Mr. Butler has won before he is eighteen, it is quite possible that he will add to the family reputation by making a clean sweep of the board.

The unemployed missionaries have not visited Cambridge. It is rather a pity, as here we are experts on the subject, and Mr. Gray could receive some useful hints from our poll men on the great problem of how to enjoy doing nothing. At Eton both parties seem to have been satisfied.

Dr. Lawrence, of Downing, has delivered two interesting lectures on "The Hague Conference." It seems waste of good material to let loose such a trained international lawyer in the byways of a rural parish. There are important subjects in which there are more teachers than taught; there are others where the only teachers are driven elsewhere by the vagaries of our fellowship system. Perhaps the next University Commission will take the evidence of those who do some of the donkey work of the place and see the rolls and whitebait devoured at the high table afar off.

The Provost of King's has intimated his intention of resigning the Directorship of the Fitzwilliam Museum, and much discussion has taken place as to the terms upon which his successor is to hold office. Things have been said and suggestions made. It has even been hinted that the new Director should keep a log-book of his attendances to show that he has earned his salary. Such an outrageous proposal was promptly vetoed. It was felt that the next step would be to make college lecturers and officials show that they were competent to earn their stipends. This would be contrary to all University traditions. When Cambridge is run on business principles we may expect the wealthy business men of the country to give grants in aid.

The report of the Examination Board shows that 34 per cent. of the candidates for Part I. of the General last year were plucked, whereas in Part II. of the Theological Special only about 6 per cent. failed. There seems to be something wrong.

One of the new scholarships founded by the late Mr. Charles Oldham is to be awarded for classical research, the scholar to be selected by a Board. The Shakespeare Scholarship is to be of the ordinary type to favour the crude digestion and absorbent faculties of literary pot-hunters.

The Theatre has been well patronized this term, and the management have done their best to provide a good bill of fare. The conduct of a certain part of the house is still very much open to criticism. The last act of a good play is often rendered unintelligible by the loud-spoken criticisms of second-term undergraduates, while the attention of the audience has been distracted all through the evening by a buzz of rapid and unprofitable conversation. A strong Committee of leading men was formed some terms ago to put down the nuisance, but things will go from bad to worse till the authorities post a few football or boxing "Blues" to jot down the names of those who interfere with other people's comfort.

The Varsity Rugby Football Team have been giving good exhibitions of the game, though Oxford vanquished them somewhat too easily last term.

The Boat is going well, but much will depend upon Stuart and his physical capacity to avoid staleness; the men are a strong, willing lot, and are improving. An unkind remark was overheard on the bank that they look better at rest than in motion.

The term is the longest on record—and the dreariest.

London—  
King's.

It is proposed to provide in London a course of instruction in household economics of University standard, post-graduate in the first place; and efforts directed towards the same end are being

made in Leeds and Cheltenham. The course will be given at the Women's Department of King's College and will begin next October. The plan has the sympathy of the Council of the Incorporated Association of Head Mistresses. A College Board, consisting mainly of the professors of the subjects germane to the course, with Prof. Smithells, F.R.S., acting as Honorary Adviser, will control the educational side of the work. The first stage will be tentative and experimental, but it is hoped that in due course it will be found possible to include courses of training for the management of large educational and other institutions, which are in many respects homes on a greater scale, for the duties of factory inspection and for philanthropic work in the homes of the workers in great cities. For the effective organization of the plan, the sum of £3,000 is needed. Already over £500 has been subscribed; and further donations may be sent to Miss Soltan, King's College (Women's Department), 13 Kensington Square, London, W.

A RESOLUTION was approved by Convocation of Manchester. Manchester University (January 29) embodying the opinion that it is desirable, in the interests of matriculated students who are unable, for financial and other reasons, to take the three years' course for the B.A. degree, that a five years' course of evening classes be established. Convocation also agreed that it was high time that a common understanding between the University of London and the Northern Universities was arrived at as to the mutual recognition of matriculation certificates on terms of equivalence.

THE report for 1906-7 states that additional promises Leeds. have been received towards the building and endowment fund, raising it to £87,000, and that it is of much importance that the remaining £13,000 required to complete the sum named by the Privy Council in granting the charter to the University should be obtained at the earliest possible date. The new detached block for the mining and metallurgical departments has been completed during the year, and is now being used for class and laboratory work. Owing to the pressure on its available space the Council have been compelled to proceed with other large building additions. The extensions are estimated to cost upwards of £50,000. The fees of scholars and students, amounting to £13,254, show a slight decrease on the previous year—a result chiefly due to alterations caused by the adoption of the educational scheme for evening classes instituted by the Leeds City Council, by which the fees for evening classes have been reduced to a nominal amount. The Treasury made a supplemental grant to the University during the year of £900, of which £400 was allocated to the purchase of special books for advanced study and £500 to meet the expenses of researches in the University; and the Council of the University voted the further sum of £490 towards the maintenance of students during the course of this work. The Vice-Chancellor's report for the session shows that the University was attended last session by 813 day students. Of the registered day students 693 entered in the Faculties of Arts (including Law), Science, and Technology, and 120 in the Faculty of Medicine. The men students in attendance numbered 672 and the women students 141. Courses of study in preparation for University degrees were followed by 360 students.

THE Fifteenth Annual Report states that the Reading. scheme whereby the College has during the last four years been completely re-established includes the erection of a hall capable of seating a thousand persons, an extensive range of studios and laboratories, lecture rooms and classrooms for literary teaching, the purchase and stocking of a farm for teaching and experimental purposes, and the provision upon it of new buildings. The total outlay had actually been £77,959. The sum of £13,343 remained to be raised. The revenue from tuition fees and capitation grants, a main test of growth and efficiency, had increased by £392. Four years ago the receipts under this head amounted to £5,415; the corresponding receipts now were £8,197. The College had gained the noteworthy distinction of being specially mentioned in the last report of the Treasury Advisory Committee in terms of commendation as follows:—"We have been impressed by the favourable nature of the Inspector's report on University College, Reading. The College was accorded provisional recognition in 1902, and we think that the satisfactory progress which it has made in the past five years amply justifies the continuance of the existing grant." The report was unanimously adopted.

### THE EDUCATIONAL LADDER.

CAMBRIDGE UNIVERSITY.—The following candidates have passed the examination in the Theory, History, and Practice of Education, and in Practical Efficiency, and are entitled to the Certificate:—Men: Class I.—C. A. J. Bonner, S. Mangham, A. G. Widgery. Class II.—W. G. Bowden, G. B. Brown, H. S. Clayton, J. Clayton, H. Dippie, P. Freeman, C. A. Gimblett, J. K. King, J. Ramsbottom, H. Thirkill, C. D. Waters. Class III.—B. F. Beaumont, S. Binnion, H. H. Wallis. All these, with the exception of Mr. King, were at the Cambridge University Day Training College. Women: Class I.—G. M. N. Beaumont, L. Everitt, J. S. Lawson, Cambridge; G. M. Leppan, Clapham High School; E. A. Lippert, Cambridge; D. Parkin, Nottingham. Class II.—E. Beale, Maria Grey College; M. A. Bowler and M. Bunce, Cambridge; E. M. Butler, Cheltenham Ladies'; K. T. B. Butler and M. Clandillon, Cambridge; E. M. Crawford, Maria Grey College; D. F. Dalston and B. E. Dobbs, Clapham High School; M. G. Findlay, E. C. Flanigan, Cavendish Square; M. S. Gatesman; E. M. Grant, Cambridge; C. B. Hutchison, Wantage; F. N. C. Kennedy, Cavendish Square; S. de Laplace, Bedford College; C. Macdermott, Cavendish Square; M. Mitchell, Great Crosby; M. W. Pedder; B. Phillips; K. M. Pope, Cambridge; N. U. Rawes, Oxford; K. F. Reeve, Bedford College; D. Schuster, Cheltenham Ladies'; S. E. Stenhouse, Cambridge; L. C. Taylor, Nottingham; D. Yeo, Cheltenham Ladies'. Class III.—I. M. Ackers and E. M. Allen, Cheltenham Ladies'; B. Barry, Cavendish Square; K. Garaway, Wantage; E. Gault, Cambridge; M. C. Haslam, St. Mary's, Paddington; E. E. Keen, Cheltenham Ladies'; E. M. Linton and A. C. Mason, St. Mary's, Paddington; E. C. Mercer, Maria Grey College; D. F. Pellmann, Oxford; A. M. Vining, Maria Grey College; R. Williamson, Cambridge; A. K. H. Young, Cheltenham Ladies'.

Smith's Prizes (names in alphabetical order): W. J. Harrison, B.A., Clare; J. E. Littlewood, B.A., Trinity; J. Mercer, B.A., Trinity. Isaac Newton Studentship: J. B. Hubrecht, B.A., Christ's. Craven Scholarship: F. E. Adcock, Scholar of King's. Davies Scholarship: Reginald Hackforth, Scholar of Trinity. Porson Scholarship: J. Ramsay Montagu Butler, Scholar of Trinity. Chancellor's Classical Medals: (1) D. S. Robertson, Scholar of Trinity and Pitt University Scholar; (2) E. G. Selwyn, Scholar of King's and Waddington University Scholar. Honourable Mention: A. Y. Campbell, Scholar of St. John's. Burney Prize: K. J. Saunders, M.A., Emmanuel.

LONDON UNIVERSITY.—The following is the pass list of the examination in Pedagogy, 1907, for external students:—Christina V. Butler, Hist. Hons. School, Oxford, Oxford Training Delegation; \*Arthur G. D. Capel, B.Sc.; Edward K. Hanson, M.A., Cambridge University College, Reading, and London Day Training College; †Winifred Hindshaw, B.A. Vict.; Frances M. Kirk, B.A. Vict.; Flora E. McKinnell, B.A. Birmingham; John Rounsefell, B.A., B.Sc.; Kathleen M. Shepherd, M.A. University College, Cardiff; Anne E. Warmington, B.A. (\*Excell'd in the practical examination. †Excell'd in the written examination.)

The following is the pass list of the examination in Pedagogy for internal students:—Ellen M. Adams, B.A., Anne M. Baker, B.Sc., and Florence E. Barnett, B.Sc., Bedford College; Annie E. Cameron, B.A., Maria Grey College; Ethel M. Hancock, B.Sc., and Florence M. Ingram, B.A., Bedford College; Lilian M. Jaggs, B.A., London Day Training College; Ethel M. Langdon, B.A., Bedford College; Dorothy Lynd, B.A. Ireland, St. Mary's College, Paddington; Jessie A. Martin, B.A., London Day Training College; Margaret W. Mathew, B.A., Bedford College; Florence E. E. Milne, B.Sc., St. Mary's College, Paddington; Madeline H. Mortimer, B.Sc., London Day Training College; Dora C. Newton, B.A., Datchelor Training College; Ellen K. Obel, B.Sc., London Day Training College; Agnes M. Perry, M.A. Ireland, and Janet H. Perry, B.A. Ireland, Bedford College; Marion E. A. Phipps, B.A., London Day Training College; Dorothy Rolfe, B.A., Bedford College; Kathleen A. Scorer, B.A., St. Mary's College, Paddington; Mabel S. Seldon, B.A. Wales, Bedford College; Eleanor Silsby, B.Sc., London Day Training College; Agnes C. P. Thomson, M.A. Glasgow, Maria Grey College; and Lily M. Warwick, B.Sc., London Day Training College.

The following Doctorates have been conferred: D.Sc. (Economics) on Miss Marion Phillips (London School of Economics); D.Sc. (Physiology) on Dr. Charles Bolton, M.D., B.S. (external student); and D.Litt. on Mr. Ernest A. Baker.

OXFORD: CHERWELL HALL.—Scholarships of £20 each for one year have been awarded to the following students, who intend to complete the course of Secondary Training in Cherwell Hall during the present year:—Miss Jessie L. Lowson, M.A., First Class Honours in Classics and Philosophy, St. Andrews; Miss Margaret Cleghorn, M.A., Second Class Honours in English and History, Edinburgh; Miss Ivy L. Gardner, B.A., First Class Honours in English Language and Literature, McGill University; Miss Margaret Muriel Gray, M.A., First Class Hons. in English Language and Literature, Glasgow; Miss Mabel Constance Daws, B.A., Second Class Hons. in Modern Languages, London.

OXFORD UNIVERSITY.—Prince Consort Prize: H. T. W. Tillyard, B.A., Gonville and Caius. Senior Mathematical Scholarship: A. V. Billen, B.A., late Scholar of University. Junior Mathematical Scholarship: Valentine W. O'C. Miley, Scholar of Brasenose. Exhibition: R. H. Crump, Scholar of Corpus Christi. *Proxime accessit*: A. M. Grundy, Scholar of Hertford.

ABERDEEN UNIVERSITY.—Fullerton, Moir, and Gray Scholarship in Mathematics: J. C. Surtees, M.A. Jenkyns Prize in Classical Philology: Harold G. Gruer.

### PRIVATE INITIATIVE IN EDUCATION

#### IN THE NORTH OF EUROPE.

MR. J. S. THORNTON recently gave an address on "Private Initiative in Education" to the Union of Teachers in Danish Realskoler, drawing his illustrations entirely from the four countries in the north of Europe—Sweden, Finland, Norway, Denmark. The meeting was held at Nyköbing, in Falster, and our report is taken from *Lolland-Falsters Stiftstidende*. Mr. Thornton said:—

I will begin with Sweden. The State School in Sweden has been a very rigid and conservative institution, much more so than in Denmark and Norway, where there are so many private schools. It has displayed no power of adapting itself to new circumstances and requirements; and as early as 1828 the State made a vigorous attempt to remedy the evil by erecting a school (*den nya Elementarskola*) whose freedom of initiative was guarded by the most elaborate precautions, in order that it might make researches and experiments of every possible kind for the good of the other schools in the country. But what is the result after eighty years? The years have gone by and the school has approximated more and more to an ordinary State school. It is a good school, a very good school; but as a school of wide-reaching and successful experiment and research it cannot for a moment compare with Rektor Palmgren's Private Recognized School,\* on which the State expends £500 a year, whilst the State School of Research must draw from the public funds perhaps twenty times as much.

When, in 1873 and 1874, it was proposed the State should establish higher schools for girls, corresponding to those for boys, the proposition was once and again rejected by Parliament. If it be asked what was the reason why Sweden refused so decidedly to educate her girls in the same way as her boys, I can imagine her answering from an experience of State secondary schools dating from the Thirty Years' War, and saying: "I value my secondary schools for boys, for I know their worth. But I also know their faults—faults which for three generations, at a heavy cost to the public purse, I have in vain endeavoured to eradicate. And, in legislating for girls, I shall try another plan and lay less weight on the outward and more on the inward. Without being careless as to buildings and equipment, I will be more careful still to secure freedom, life, variety, and movement."

To secure these ends the State determined to erect no schools of its own for girls, but to support those already existing, whether private schools or municipal. And the consequence is that the girls' schools have very much more freedom than the boys', cost the State far less, come nearer to the children's homes, and have no difficulty in at once satisfying the needs of the time and locality.

In Finland the private co-education schools, there called

\* Direktor Max Walter, of the Musterschule, Frankfurt-am-Main, has written an account of the Palmgrenska Samskola, which may be seen either at the British Museum or at the Board of Education Library.

*Samskolor*, have had a splendid success. There are three reasons which have led to this. First, the economical reason. In a small town of three to four thousand inhabitants it is impossible to have a good secondary school for boys and another for girls, but it is easy to have one for both together. The second reason is the educational one. In the school, as in the family, it is well that boys and girls grow up together. The third reason will interest those who are advocates of women's suffrage. It is hoped, through the *Samskolor*, to diminish the inequalities between men and women. There are more than four thousand girls in private recognized *Samskolor* in Finland, whilst there are less than two hundred in the corresponding schools of the State. As a consequence of this, when last year the four Estates were swept away to make room for a single Chamber, the suffrage was given to women and men alike on attaining their twenty-fourth year.

The relation between public and private effort as regards education in Finland will best be shown by the following statistics:—In 1880 there were 4,592 boys and girls in 47 higher State schools, costing the State 1,220,135 Finnish marks (i.e., francs), as against 3,282 boys and girls in 50 private schools, costing the State 132,800 marks. But in 1905 there were 9,495 boys and girls in 49 higher State schools, costing the State 3,190,543 marks, as against not less than 11,148 boys and girls in 111 higher private schools, costing the State 951,133 marks.

And now to Norway. I must pass by the late Skolebestyrelse, although, year after year, he passed more than a hundred pupils a year at the *Middelskole examen* (an examination nearly corresponding to London Matriculation); I must pass by the private training colleges, although they train just as many teachers as the State training colleges at less than one-tenth of the cost to the State. I will pass by these two matters in order to pay greater attention to the higher schools for boys and girls—the *Gymnasia* and *Middelskoler*. Of all these four northern countries there is not one that has derived greater benefit from private initiative, so far as higher schools are concerned, than Norway; and there is no country where the State has been so niggardly to private initiative as in Norway. The consequence is that the private schools in Norway (by private schools I always understand the *recognized* schools) have had a development quite different from that in Denmark.

The most eminent name in the history of education in Norway—I may even say in the North of Europe—during the last century was Hartvig Nissen, the well known head master of a private school in Christiania. "It was he," says Prof. Paludan in his "Higher Education in Denmark, Norway, and Sweden" (1885), "who, in a still higher degree than the Danish private schools, went ahead of the State schools by the adoption of new educational ideas and methods. This school became more and more a model school, to which the public schools had to conform. Norse and German were the basis of language instruction, and the living languages were studied before the dead—Latin not till twelve years of age, and Greek not before thirteen or fourteen. The union of classical side and modern side in one school, the longer preparatory course common to both sides, the putting off the ancient languages to a later age, as well as the relatively large number of pupils in each class, were economical necessities for the private school, which Nissen at a later date elevated into educational principles and then gave them an ever widening extension. Great importance was attached to object-lessons, *viva voce* instruction, and gymnastics. In 1847 a whole week was occupied exclusively in musket drill. Amongst other experiments, it may be mentioned that for two years from 1856 the two highest classes did all their work in school, so as to have no home-work, with the exception of a few essays. Under constant superintendence and with only occasional use of examination as a means of control, each pupil in those classes worked on independently, as fast as he could, without being kept back by the necessity of being taught with others, and so the transition was made to the freer methods of University studies." The 33 pupils of 1843 became 663 twenty years later; and in 1849 a corresponding school was opened for girls, which exists to this day.

From 1850 to 1854 he had to transfer his school for a while to other guidance (he parted with it finally in 1866); for in those years he was acting as the Government's *Konsulent* in school matters, and in that capacity paid in 1853 a long visit to Scotland in order to study the parish schools. The results of that visit were embodied in a report of several hundred pages which was published next year and formed the basis of the elementary school law of 1860. In 1854 he represented Norway at the

Educational Exhibition promoted in London by the Society of Arts, and on that occasion delivered a lecture, to be found in the Society's Journal for October, 1854, on "The School System of Norway." He was next a member of the Commission that transformed eleven out of the fourteen State schools into combined *Latin- and Real-skoler*. From 1865 to 1873 he was at the head of the Education Office and was at the same time appointed Chairman of the Commission for the reorganization of the higher schools. Their labours resulted in the new school law of 1869, which fixed the form of the higher schools down to 1896. In 1872 he was appointed Rektor of the old Cathedral School in Christiania, which dates from the twelfth century; and in that position he died in 1874.\*

After Nissen came Aars and Voss, whose school at one period numbered 850 pupils, and whose *Gymnasium* (i.e., the higher division of the secondary school) is still the most important in Norway.

One would think that State and Commune would be so grateful for help so striking in amount and quality that they would be eager to render it possible for such schools to spread all over the country. But, without some subvention from the State—such as we find in Denmark, in Sweden, and in Finland, but not in Norway—it is scarcely possible for a good private school to exist outside the greater towns. Such schools as Nissen's and Aars and Voss's are scarcely found in Norway outside Christiania, Bergen, and Trondhjem. The consequence is that, whilst the secondary recognized schools in the country districts of Denmark are, 70 per cent. of them, in private hands, the corresponding schools in Norway are all municipal in character. Norway, which will not give a single penny to private *Gymnasia* or to private middle schools, however good they may be, possessed, in 1900, 66 middle schools outside Christiania; and all, except those in Bergen and Trondhjem, were municipal. But in Denmark it does not matter whether a school has been erected by State, by Commune, or by private individual, so long as it is good and reaches the prescribed standard. And the consequence is that for the same population Denmark has twice as many recognized secondary schools in the country districts as Norway—i.e., Denmark in the country districts brings the secondary school ten times as near to pupils' homes as Norway. And, whilst some portion of this result is due to the fact that Denmark is only one-eighth of the size of Norway, the other and larger part of the result is due to the greater favour shown by Denmark to approved and selected private effort.

But, up to the present time, these middle schools in Norway have had one great advantage over the corresponding schools in Denmark. Teachers' salaries are much greater than in Denmark, inasmuch as the State pays one-third of the commencing salary and all subsequent additions. It is a great shame that salaries for teachers in the recognized secondary schools in Denmark are lower than those in the elementary schools. And nothing rejoices me more than to know there is a good prospect of this scandal being removed.

Now we come to Denmark last of all. But it will be so stupid of me to bring coals to Newcastle that I shall be as short as possible. What has private initiative not done in Denmark? In June, 1905, there were nearly 26,000 pupils in Danish *Realskoler*. Of these 1,300 were in State schools, nearly 7,000 in municipal schools, and nearly 18,000 in private recognized schools. Besides this, one half of the pupils in the *Gymnasia* are in private State recognized schools. There are also the private training colleges which train all the women teachers and more than half the men. But in England we are interested still more in what your People's High Schools have accomplished. The connexion between the People's High Schools and all your co-operative work is exceedingly close. You know that the ordinary Englishman thinks much—yes, all too much—of money; and when we see that your co-operative dairies, bacon factories, and similar undertakings—all of them carried on to such a large extent by pupils from the People's High Schools—account for the half of your exports, we begin to believe that an all-round humanistic development is, after all, as important for the working class as it is for the middle and the upper classes. Let me also remind you that 30 per cent. of the members in your upper and lower Houses of Parliament—and amongst them the Prime Minister himself—have been pupils in the schools which, above all others, are due to private initiative—I mean the People's High Schools.

\* This account of Nissen is drawn from pages 62, 63 of Vol. XVII. of "Special Reports on Educational Subjects."

## OPEN COURT.

*They have said . . .  
What say they?—Let them say!*

### THE TRAINING OF TEACHERS.

By the Rev. J. O. BEVAN, M.A., F.C.P.

As an element in the organization of secondary education, the training of teachers seems scarcely to receive the attention it merits. This is rendered the more noticeable when one compares the existing state of things with that prevailing in respect of elementary education. Doubtless, the original training colleges were founded by voluntary agencies; but of late years they have been largely aided by Government, and their number has been recently increased through the establishment by certain Local Education Authorities of day training colleges, which are mainly supported out of rates and taxes. All these have relation to one class of teachers only—namely, those intended for work in public elementary schools. (Some of these teachers afterwards take up work in grammar schools or in private schools, but the number is so small that it may be left out of account.) The enlargement of the curriculum and the improvement of work in primary schools have resulted in additional demands being made upon these training colleges, and in the desire of the more ambitious workers to matriculate at a University or to obtain the diplomas of the College of Preceptors. Further—what is worthy of special mention—an association has been formed to raise a fund available for sending eligible ex-pupil teachers to Oxford or Cambridge, that they may thereby have the advantage of a full residential course.

As educationists, we must rejoice at the improved education thus given to the children of the people, and at the more elaborate preparation demanded from their instructors. But, when we consider the numerous and important agencies at work in this direction, and the large sums expended by the State, by public bodies, and by voluntary agencies in the work of preparation, we are led to look at the contrasted position in secondary education. On one side, the State does everything, or almost everything; in the other case, but very little. From the present relations between so-called elementary and secondary education, and from what we may conceive as likely to happen in the immediate future if the present forces in the lower stratum continue to act, the gravity of the position becomes more apparent.

It may be alleged that the cases are, to a certain extent, different. This is true, but it may also be admitted that the field of secondary education itself is not uniform. There is great inequality, and the different elements require separate treatment. The great public schools will always be able to draw a sufficiency of men from the Universities. In many instances, these would be able to work their way through, because endowment has made up for State aid.

Rightly or wrongly, there is so much indifference shown by head masters to training, other than muscular, that the lack is not felt so much as an enlightened conscience would demand. We are not here dealing with the necessity of technical training for teachers on the part of the University, but it may be taken for granted that, if there be a call for it, that call will be obeyed. We should rejoice to anticipate that a time would soon come when, under the pressure of a registration scheme, training would become *sine qua non*. When that time arrives the Universities will be required to take it up in earnest, and difficulties as to the provision of Chairs of Education and practising schools will arise. Furthermore, the cost, in time and money, involved in a post-graduate course would press heavily on expectant secondary teachers.

It may be contended that public grants to elementary teachers are balanced by endowments appertaining to grammar schools and Universities; but these endowments can be utilized only in respect of general culture, leaving nothing available for specific training in the science and art of education. Further, the number of exhibitions and scholarships is limited; many are taken up by the workers in other fields of activity; and the obtaining help in this way is difficult and uncertain of accomplishment. With reference to a certain number of grammar schools, and a large proportion of private schools, intending teachers are mostly poor and dependent upon their own exertions. Although, with extraneous help, they might be able to afford to work for a London University degree, yet they could not afford to spend a further term of two years or so in an educational

centre in order to submit themselves to the discipline of a regular technical course of training.

Does not this condition of affairs furnish a real and growing danger to secondary education? One is not making invidious comparisons between the two kinds of education, nor is one contending that a sixpence less should be spent on the education of elementary teachers. The following facts, however, should be kept in mind. The importance to the State of a sound education for the middle class is incontestable. The middle class, in respect of the sacrifices for education made by its members, deserves well of the country. Members of this class not only educate their own children, but also contribute largely towards the education of the children of the artisan class. We take the distinction as it stands, and by no means wish to imply that children of the artisan class or of any class should not have full access to the advantages of secondary education, so far as may be.

If it be a matter of necessity that the children of the hand-labouring classes be well instructed, it is equally a matter of necessity that the children of our trades-folk, merchants, manufacturers, and professional men be likewise well instructed. In this particular of training of teachers, these elements of society have been left entirely to themselves up to the present; and it now becomes a question whether the State holds the scales evenly as between these classes. What can be done to redress the balance? Existing voluntary agencies can be sustained. Amongst these, the College of Preceptors bears an honourable record. As a writer in an educational paper reminds us, "training of teachers was in the forefront of the earliest scheme of the College, and Prof. Payne was the first and very well known occupant of its Chair of Education." Lectures in pedagogy have been consecutively given during a long series of years. Diplomas—which would be all the better in the lower stage for a little screwing up—have been granted to intending and acting teachers. Endeavours have been made to engage the students in practical training. The classes were open to women and men alike. Here, then, was provided all that was wanted; but the difficulties were great—too great, indeed, for the first effort to succeed—and some step is, therefore, necessary to render effectual the resources possessed by the College. Further, a teaching University for London, with affiliated colleges, is now constituted; but more requires to be done, and one would ask: Is it even now premature to approach the legislature—in connexion, it may be, with other secondary training colleges—for a grant which would advance the good work, and provide substantial help for those student teachers who would then find it possible to set aside two years for profitable study? Why should not members of the College aim at this end, in conjunction with the authorities of the London University, with whom some workable basis might possibly be found?

In the meantime we could not do better than bring into prominence that part of the Report of the Royal Commission of 1895 which dealt with training, and impress its conclusions upon the profession, the public, and Parliament. Voluntary effort has done something, especially for women teachers—the Universities are waking up—but all that has gone before is only a beginning, and, with the best intentions, these bodies can do little without substantial help. Under existing circumstances—especially in face of public calls now being made—it is of little use to look for aid to private individuals. We turn our eyes, then, to the country at large and to Parliament. Of late, Parliament has had the allocation of large sums of money; but, whilst some has gone to the provision of technical education, and more to the advancement of elementary, the secondary side has been comparatively neglected. We have a right to ask that the State shall foster what has been satisfactorily originated.

One may be allowed to appeal to private teachers for the support of this plea, inasmuch as the question affects them more than those engaged in endowed or high schools; since a large proportion of their number has not been in a position to obtain degrees or diplomas. It is surprising, therefore, that private teachers, as a body, have not realized existing weaknesses.

Some persons look for a solution of the problem in this respect to a proposal that teachers for all classes of schools should be trained together. There would be no objection to this being done under certain conditions, but these conditions would be rendered more favourable if those interested in secondary education did what the case now demands, namely, secure for teachers in that class of school the measure of recognition and help which is their right. Then in due course would come a united profession, the abolition of invidious distinctions, and a complete interchange of duty and of work.

### BELGIAN TECHNICAL SCHOOLS.

THE prosperity of Belgium, which is advancing rapidly from year to year, is undoubtedly due (says the *Journal of the Society of Arts*) to the technical teaching which is prominent in the diversity and number of its institutions. These schools, created and maintained by the Government, are under the general supervision of the Department of Commerce and Labour, which appoints a Board of General Supervisors, whose duty it is to see that the teaching is of a high standard, as well as to look into the sanitary and hygienic arrangements of the various schools. Belgium enjoys the distinction of being the first country to organize domestic training schools, the first being established in 1889. According to the American Consul at Liège, this system comprises in its practical curriculum maintenance and cleanliness of dwellings, furnishings, laundry work, cutting, fitting, making and repairing ordinary garments, cooking, and, in the rural districts, gardening, dairy work, and the care of poultry. The theoretical teaching consists of lectures on hygiene, domestic economy, care of children, and sick nursing. This particular training is intended for the children of the working classes, the object being to prepare the pupils for the economical management of a house, as a mistress or as a servant. In the more advanced schools, termed professional domestic schools, the theoretical and practical teaching are equal, and include designing, cutting, dressmaking, millinery, artificial flower making, lace making, embroidery, china painting, commercial book-keeping, typewriting, domestic economy, &c. The practical effect of this system not only enables a girl to gain a livelihood by the application of her knowledge in the various branches taught, but is particularly emphasized in house-keeping.

While the Government has legislated against the employment of women under ground, they assume important places in the large manufactories, and work side by side with the male employees, showing equal ability. Many of the large workshops give technical lectures and demonstrations expressly for the female employee who is unable to take advantage of the technical course offered to boys. In training boys for professional and industrial work, attention is given to the demands of the various localities. The various schools are as follows:—Mechanical and electrical engineering, iron and steel, wood cutting, carpentering, joining, plumbing, watchmaking, jewellery making, firearm manufacturing, bookbinding and gilding, painting, designing, engraving, spinning and weaving, dyeing, tanning, basket and lace making, upholstery, tailoring, telegraphy, music, &c. While the practical work of these institutions is the same as in the actual workshops, the theoretical training is intended to meet what the workshop does not supply. Apart from the Government technical training schools, private institutions have been established, and are partly maintained by private subscriptions. These, however, look for help to the Government. The well-known School of Arms in Liège turns into the local workshops annually young men already fitted to apply themselves practically to any branch of the firearm trade. This class of labour is always in demand, and at no time need the firearm workman be out of employment.

The School of Textiles is an institution where teaching has brought out the manufacture of cloth and all branches attached to that industry to a high state of perfection. Year after year the cloth manufacturers in other countries apply to this school for a competent man to serve them as foreman or superintendent. In Belgium itself the pupils at this institution are immediately taken up by the local manufacturers and their future is assured. The Government, to encourage application, gives yearly a money prize to pupils having distinguished themselves at the school, this being intended to meet the expenses of a journey abroad. The same conditions prevail at the School of Mining and all the other schools.

Technical education in Belgium has for its object to assist the employer and employed alike. The present condition of both is highly satisfactory, and the future points to a substantial advancement. The country is tranquil, the working classes are increasing their savings annually, a spirit of contentment is everywhere manifest, which condition of affairs guarantees uninterrupted labour. Lock-outs and strikes are rare, while the question of the unemployed is absent. All workmen are more or less skilled, and their labour wins a compensation satisfactory to them. The continued industrial and commercial advancement of Belgium stimulates the demand for labour, and the labour, owing to technical education in all its branches, readily meets these demands.

### L.C.C. INDUCEMENTS TO TEACHERS.

THE Education Department (Executive) of the London County Council have prepared a statement of the opportunities now open to boys and girls that propose to enter the teaching profession. The modifications which have been recently made in the Regulations of the Board of Education and of the London County Council, it is pointed out, have considerably increased the facilities for entering the profession, and, when once a man or woman has become a trained teacher, there is a safe prospect of permanent employment at an adequate salary increasing to a good maximum. Moreover, the cost of the preliminary training is now met to a large extent by the grants which are offered in the way of scholarships, both by the Government and by Local Authorities.

The London County Council has established a comprehensive system of scholarships which enables the capable children of parents who have slender means to pursue a course of education and training from the age of eleven to the age of twenty with very little cost to themselves. A boy or girl may become a junior scholar at the age of eleven, a bursar or pupil-teacher at the age of sixteen, a student-teacher at the age of seventeen, a training college student at the age of eighteen, and at every stage may receive not only free education and training, but also maintenance grants of a substantial amount. On leaving the training college at the age of twenty the student can at once begin to earn the full salary of a trained, certificated teacher, the rates of pay for assistant teachers in London being as follows:—Men, £100 a year, rising with two increments of £5 and twelve of £7. 10s. to £200; women, £90, rising by increments of £4 to £150. Every year, in order to staff the London schools with a due proportion of teachers, the London County Council requires about 1,450 new assistants at the above salaries. Moreover, there are a great many posts in London for head teachers. The salaries attached to these posts are: Men, ranging from £200 to £400 a year, according to the size of the school, with a few posts of £500 a year; women, ranging from £160 to £300 a year, with a few posts at £400 a year. About seventy to eighty of these posts fall vacant every year, and the posts are by regulation filled almost without exception from assistants who are already in the London service. At the present moment there is a good opening for young men to enter the profession, since the number of vacancies is in excess of the number of qualified candidates.

The training for an assistant master or mistress in a secondary school follows somewhat different lines from that required for an assistant in an elementary school; but here, again, the County Council offers substantial assistance to intending teachers by its system of junior, intermediate, and senior scholarships, as well as by the provision which it makes in the way of training colleges. The salaries which are offered to assistants in its secondary schools are as follows:—Men, £150, rising by £10 to £300 and in some cases £350; women, £120, rising by £10 to £220 and in some cases £250. The salaries offered to head masters and head mistresses of secondary schools are as follows:—Head masters, ranging from £400 to £800 according to the size of the school; head mistresses, ranging from £300 to £600 according to the size of the school. The scholarships offered by the London County School enable boys and girls to pursue their education to the University stage, and thus to qualify for these positions. Full particulars with regard to the various facilities offered by the Council are given in the "Scholarships Handbook," which may be obtained from Messrs. P. S. King & Son, 2 and 4 Great Smith Street, Westminster (1d., post free 3d.).

### CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

#### AN APPEAL FOR EDUCATIONAL PEACE.

To the Editor of "The Educational Times."

SIR,—May one fast passing from the "strife of tongues," who has numbered Nonconformists, ministers and lay people, among his friends, crave a brief hearing? Let there be an end to this fratricidal war about the schools. To either side a partial settlement of the question would be a Pyrrhic victory. If there has been

in the past aloofness on either side, let there be now whole-hearted co-operation in the great work of national education. "Neu patriae fortis in viscera vertite vires!"

*For the Children's sake.*—Nonconformists and Church people, we all want the children to be trained to lead happy and useful lives; we all believe that the surest moral training rests on religion; that real education is not the accumulation of knowledge, still less of multifarious smatterings; that education, to be worth having, is character-building through the personality, mainly, of the teacher. Is not this a worthy aim for all to combine for? England lapses back into paganism while the swords of Christians are clashing over the children's heads.

*For the Nation's sake.*—If it is true that England lags in what should be a friendly rivalry with other nations, what is the cause? Not any want of capacity, not any technical backwardness, so much as a something below the surface which too often manifests itself in selfish unthriftiness. Here, again, is a call to all to combine. We want our schools to turn out patriotic, unselfish citizens. We want our English homes to become more generally what they might be, what they ought to be—centres of light and love.

*For the Master's sake.*—Harshness and bitterness in controversy are a dishonour to Him. Never, so long as time shall last, can any two persons see the same thing exactly in the same light, or from the same point of view. But, beneath our differences there is a Bed-rock; and "that Rock is Christ." The unity which we all long for and pray for is far more likely to be gained by the frank recognition of these differences than by the vain attempt to dragoon the nation into submission to one State-made creed.

What England wants is a variety of type in her schools. Will not Nonconformists join hands with Churchmen in defending the great principle of parental responsibility for the religious training of our children? This is what the "Parents' League" is for. I am, Sir, &c. I. GREGORY SMITH.

Horsell, Woking, January, 1908.

#### AN ARITHMETIC OF THE OLDEN TIME.

To the Editor of "The Educational Times."

SIR,—I have taken the following extract from an old arithmetic ("Intuitive Calculations," by Daniel O'Gorman; ninth edition, 15,000; 1853) used in a country school of my acquaintance not fifty years ago. The author gravely sets to work to teach his pupils *how to multiply money by money!*

*Rule.*—Pounds multiplied by pounds produce pounds. Pounds multiplied by shillings, every 20 is a pound, the rest shillings. Pounds multiplied by pence, every 12 is a shilling, and the rest pence. Shillings multiplied by shillings, every 20 is a shilling, every 5 is threepence, and each 1 is two farthings and four-tenths of a farthing. Shillings multiplied by pence, every 5 is a farthing, and each 1 two-tenths of a farthing. Pence multiplied by pence, every 60 is a farthing, and every 6 one-tenth of a farthing.

*Example.*—Multiply £3 5s. 6d. by £2 12s. 9d.  
*Explanation.*—First, I say, £2 by £3 make £6. Secondly, £2 by 5s. is 10, and £3 by 12s. is 36, whose sum is 46, which by second direction will be £2 6s. Thirdly, £2 by 6d. is 12s, and £3 by 9d. is 27, whose sum is 39, which by direction the third will be 3s. 3d. Fourthly, 12s. by 5s. is 60, which by direction the fourth is 3d. Fifthly, 12d. by 6d. is 72, and 5d. by 9d. is 45, whose sum is 117, which by direction the fifth will be 5<sup>1</sup>/<sub>2</sub>d. and four-tenths. Sixthly, 6d. by 9d. is 54, which by direction the sixth is 1<sup>1</sup>/<sub>2</sub>d. Add the whole, and you will find £8 12s. 9<sup>1</sup>/<sub>2</sub>d. as required.

The thing is too amazing for words; but I should have liked to know the result of multiplying lamp-posts by sky-rockets, "which by direction the last would be" old age pensions, I fancy.—I am, Sir, &c., J. VINE MILNE.

#### A CORRECTION.

To the Editor of "The Educational Times."

SIR,—May I be allowed to correct three errors in the report of my remarks at the Half-Yearly Meeting as given on page 70 of the current number of *The Educational Times*? For "Scholastic Education Association" and for "Scholastic Registration Association Alliance" read "Scholastic Registration Association"; and for "mushroom institutions" read "children." The use of the word "mushroom" would rightly expose me to the charge of discourtesy.—I am, Sir, &c.,

February 1, 1908.

BARROW RULE.

# BLACKIE'S LIST

## HISTORY.

### A Brief Survey of European History.

By ARTHUR HASSALL, M.A. An excellent general sketch of European History from Charlemagne to the present time. Crown 8vo, cloth, 4s. 6d.

### Landmarks of European History.

By E. H. M'DOUGALL, M.A. Oxon., late Assistant in the Tewfikiah School and Training College, Cairo. With many Coloured and Sketch Maps, Index, &c. 3s. 6d.

### Heroes of the European Nations.

From Early Greece to Waterloo. By A. R. HOPE MONCRIEFF. 1s. 6d.

### Readings in English History.

From Original Sources. Edited by R. B. MORGAN, B.Litt., and E. J. BALLEY, B.A. Illustrated. Vol. I., B.C. 54 to A.D. 1154, 2s. Vol. II., 1154 to 1485, 2s. 6d. Vol. III., 1485 to 1688, 2s. 6d. (just ready).

### A Brief Survey of British History.

By G. TOWNSEND WARNER, M.A. With Tables, Summaries, Maps, Notes, &c. 1s. 6d.

"The best English History for younger pupils. Used in all leading Preparatory Schools, and the Royal Naval College, Osborne."

## ENGLISH.

### Combined Course of Literary Reading and Composition.

Illustrated from Famous Paintings. Edited by LEWIS MARSH, M.A. Carefully chosen readings from English Literature, with graded exercises, forming a complete course of instruction in English. 2s.

### Précis Writing.

By H. LATTER, M.A., of Cheltenham College. With numerous Exercises, a practical Introduction, and a Worked Example. Crown 8vo, cloth, 3s. 6d. KEY, 2s. 6d. net.

### Précis Writing—Second Series.

By H. LATTER, M.A., of Cheltenham College. This second series contains a fresh selection of Exercises on the whole easier than those in the first book. The two together form a collection that will meet all the requirements of army classes, &c. 3s. 6d. KEY, 2s. 6d. net.

### English Poetry for the Young.

Selected by S. E. WINBOLT, M.A. A chronological selection of English poetry, clearly printed and well bound in cloth. 1s.

## BLACKIE'S ENGLISH TEXTS.

Edited by W. H. D. ROUSE, Litt.D.,  
Head Master of the Perse School, Cambridge.

EXCELLENT MATERIAL FOR THE LITERARY STUDY OF ENGLISH.

In cloth covers, price 6d. each.

Is to USE

# FLORIGENE

(Regd.)

(Awarded BRONZE MEDAL of the ROYAL SANITARY INSTITUTE)  
On all Wood, Linoleum, and other Floors in

**SCHOOLS, LABORATORIES,**

Art Galleries, Libraries, Museums, etc..

**EARLY in the EASTER VACATION**

(THREE TIMES A YEAR ONLY BEING NECESSARY).

"FLORIGENE" also Purifies the Atmosphere, Preserves Floors, Saves Labour, etc.

"FLORIGENE" is a fluid which can be easily and quickly used by the unskilled, and each application is generally effective for 2 to 4 months, or longer, according to the wear.

It is not sticky, but the dust and dirt absorb the "FLORIGENE" from the impregnated floors and thus become "weighted," so that when the floors are brushed in the usual manner, the sweepings do not rise, but roll in front of the broom.

**No Scrubbing or Sprinkling of Floors.**

**BOOKS, FURNITURE, APPARATUS, etc.,**  
seldom require dusting or cleaning.

"FLORIGENE" is an aid to the Prevention of Throat Irritations and School Epidemics.

The Cost (if any) is small compared with the HYGIENIC AND OTHER IMPORTANT ADVANTAGES.

For particulars, Reports, and Testimonials, write

### CURRENT EVENTS.

At the Members' Meeting of the College of Preceptors, on March 18, Dr. T. Percy Nunn will read a paper on "Science in correlation with Geography and Mathematics."

M. G. PETILLEAU will present a *Causerie anecdotique*, entitled "Notre Oncle," to the Société Nationale des Professeurs de Français en Angleterre, at the College of Preceptors on March 28, at 4 p.m.

MME. CHAMBON will lecture on "La Bretagne: son sol, ses curiosités et quelques-unes de ses vieilles légendes," at Bedford College for Women (University of London), on March 12 at 5.15 p.m. Open.

UNDER the auspices of the Geographical Association the following lectures will be delivered at University College, London:—March 13, "How to Teach the Geography of a Country," by Prof. L. W. Lyde, M.A.; March 27, "Orographical Maps as the Basis of the Geography Lesson," by Dr. A. J. Herbertson, M.A. Non-members may obtain tickets (1s. each) from Mr. J. F. Unstead, 5 Wiverton Road, Sydenham, S.E.

THE fourth Biennial Vacation Course of the Oxford School of Geography will be held August 10 to 28. There will be at least two lectures and a period of practical work in field or map-room or an excursion each day. Special evening lectures and discussions will be arranged. A more detailed programme will be issued in June.

THE Child Study Society, London, announce the following lectures and discussions (Parkes Museum, Margaret Street, W., at 8 p.m.):—March 5, "The Education (Administrative Provisions) Act in relation to the Inspection and Treatment of the Teeth," by W. T. Elliott, D.D.S., L.D.S.; March 12, "Congenital Aphasia (Word Blindness and Word Deafness)," by C. J. Thomas, M.B., B.Sc., D.P.H.; March 19, "Anthropometry and Physical Development," by F. C. Shrubbsall, M.A., M.D., M.R.C.P.; March 26, "The Downfall of the Dogma of Formal Training," by T. H. Hayward, Ph.D.

THE Modern Languages Holiday Courses of the Teachers' Guild at Tours, Honfleur, Neuwied, and Santander will commence in the first week of August. Information from the General Secretary (Mr. H. B. Garrod), 74 Gower Street, W.C. Handbook (6d.) ready May 1.

LORD LISTER has declined an invitation to become a candidate (unopposed) for the Chancellorship of Glasgow University.

OXFORD UNIVERSITY has conferred the honorary degree of D.C.L. upon Prof. Westlake, Cambridge, the honorary

degree of M.A. upon Mr. Nicol F. Mackenzie, M.Inst.C.E., Instructor in Surveying, and upon Mr. C. J. Holmes, Slade Professor of Fine Art; and the honorary degree of Mus.M. upon Herr Paul David, Music Master at Uppingham.

THE University of Edinburgh proposes to confer honorary degrees as follows:

D.D.—Rev. Ellis Edwards, M.A., Principal of the Calvinistic Methodist College, Bala; Rev. Hugh Ross Mackintosh, M.A., D.Phil., Professor of Systematic Theology, New College, Edinburgh; Rev. William Robertson, M.A., Minister of Coltness Parish; Rev. Alexander Smellie, M.A., Original Secession Church, Carlisle.

LL.D.—The Maharaja of Jaipur: Mr. James Ormiston Affleck, M.D., Edinburgh; Prof. Ramkrishna Gopal Bhandarkar, Bombay Legislative Council; Prof. William Burnside, Royal Naval College, Greenwich; Mr. Richard Caton, M.D., Lord Mayor of Liverpool; Sir Norman Lockyer, Director of Solar Physics Observatory, South Kensington; Sir James Balfour Paul, Lyon King of Arms, Edinburgh; Mr. Reginald Lane Poole, M.A., Ph.D., Oxford; Mr. Andrew E. Scougal, H.M. Senior Chief Inspector of Schools in Scotland, Edinburgh; Right Hon. Thomas Shaw, Lord Advocate.

MCGILL UNIVERSITY, Montreal, has conferred the honorary degree of LL.D. upon Mr. Bryce, British Ambassador to the United States.

THE University of Durham has conferred the honorary degree of M.Sc. upon Mr. R. A. Harper Gray, Armstrong College, Newcastle.

LORD LOREBURN, D.C.L., Lord Chancellor, has been elected an honorary Fellow of Balliol College, Oxford.

AT Downing College, Cambridge, Sir Herbert Isambard Owen, F.R.C.P., Principal of Armstrong College, the Rev. T. J. Lawrence, LL.D., formerly Fellow and Tutor, and the Hon. W. P. Schreiner, C.M.G., K.C., formerly Fellow, and late Prime Minister of Cape Colony, have been elected Honorary Fellows.

A FUND is being raised for a Studentship in connexion with Oxford, to be held at the School of Rome, as a memorial of the late Prof. Pelham, who was the founder of the School and Chairman of the Managing Committee until his death. The Rector of Exeter College is treasurer of the fund.

**Endowments and Benefactions.** MRS. JOHN RYLANDS, Longford Hall, near Manchester, has left £50,000 to Victoria University, £25,000 to Owens College, £10,000 to Mansfield College, £8,000 to Hackney College, and £5,000 to the Baptist College, Regent's Park, London.

MRS. BELL PETTIGREW has given £6,000 to St. Andrews University towards providing a museum and extending the Botanical Garden, in commemoration of the long association of her husband, the late Dr. J. Bell Pettigrew, with the University as Professor of Medicine and Anatomy (since 1875).

DR. J. W. H. TRAILL, Professor of Botany, Aberdeen University, has given to the University £1,000, to found a bursary for science students.

THE Treasury has again made a special grant of £1,200 for this year to Manchester University for the promotion of research and other special purposes.

THE Treasury has agreed to give an annual grant of £200 to the Royal Scottish Geographical Society.

MISS MARY W. SHILLITO has given £800 to Oxford University to provide a stipend for Dr. Stephen Langdon as Reader in Assyriology and Comparative Semitic Philology for three years.

MISS CAROLINE E. WILLIAMS, of Vicarage Gate, London, W., a generous donor to the funds of Cardiff University College, has left £800 to Aberdare Hall, Cardiff, for a Scholarship, and £800 to Cardiff University College.

THE Mercers' Company have granted £535 towards the funds for the incorporation of King's College in the University of London.

THE Hants County Education Committee have raised their annual contribution to Hartley University College to £600 (almost double the previous sum), and will make a special grant of £200 for the year ending March 31, 1909. The College needs further substantial help.

LORD STRATHCONA has given £100 to a fund for establishing a Lectureship in Geography in Edinburgh University.

THE Board of Agriculture has granted £250 to the Cheshire Agricultural and Horticultural College, Holmes Chapel, for research work.

THE late Lady Stanhope has bequeathed a sum sufficient to establish a scholarship of £50 a year at Harrow, in memory of her husband, the Right Hon. Edward Stanhope, Secretary at War 1887-92, who was in the Harrow Cricket Eleven of 1859.

THE REV. JOHN ROSCOE, of the Church Missionary Society, has presented to the University of Cambridge a second instalment of native manufactures from Uganda, including an exceptionally interesting and valuable set of relics of deceased Baganda kings.

THE London Inter-Collegiate Scholarships and Prizes examination for 20 scholarships and exhibitions, tenable at University College, King's College, and the East London College, on May 12 and following days. Candidates must have passed the London Matriculation (or an equivalent) Examination and be under nineteen on October 1, 1908. The total value of the scholarships offered exceeds £1,700. Full particulars and forms of entry from the Secretary of the Board (Mr. Alfred E. G. Attoe), University College, W.C.

AT Oxford scholarships, &c., will be offered for competition as follows:—March 3, Mathematics (Magdalen, Brasenose, Christ Church, Worcester); March 10, Natural Science (Keble); March 17, Classics (New, Magdalen, Corpus Christi), Natural Science (Merton, New, Corpus Christi), History (Exeter); April 21, Classics (non-collegiate); May 12, Classics (Pembroke); June 2, Classics (Brasenose), Law (Brasenose); June 25, Classics, History, English, Modern Languages (Worcester); June 30, Natural Science (Balliol, Brasenose).

**Appointments and Vacancies.** MR. WARDE FOWLER has been appointed Gifford Lecturer in Edinburgh University (not Glasgow University, as we mistakenly reported last month).

MR. HENRY TAYLOR BOVEY, F.R.S., D.C.L., LL.D., Dean of the Faculty of Applied Science and Professor of Civil Engineering in McGill University, Montreal, and Hon. Fellow of Queens' College, Cambridge, has been appointed Rector of the Imperial College of Science and Technology.

MR. RONALD M. BURROWS, M.A. Oxon., Professor of Greek, University College, Cardiff (since 1897), has been appointed Professor of Greek in Manchester University.

VICE-ADMIRAL SIR JOHN DURNFORD, K.C.B., D.S.O., has been appointed President of the Royal Naval College, Greenwich, in succession to Admiral Sir Arthur D. Fanshawe, K.C.B.

MR. JAMES ADAMSON, Advocate, Edinburgh, has been appointed Dean of the Faculty of Law in Victoria College, Wellington, in succession to Prof. Salmond.

THE Secretary of State for India has appointed Mr. Robert Marks, M.A., of Wadham College, Oxford, to be Professor of Logic and Moral Philosophy in the Elphinstone College, Bombay; Mr. F. Storrs, B.A., of Cambridge, to be Professor of English Literature in the same College; and Mr. William Christopher Wordsworth, M.A., of Jesus College, Oxford, to be Professor of Philosophy in Bengal.

A LECTURER in Geography is required by the University of Sheffield. Apply to the Registrar by March 14.

MR. J. G. STEWART, M.A., B.Sc., Lecturer in Agriculture, Leeds University, has been appointed Lecturer in the Edinburgh and East of Scotland College of Agriculture.

MR. W. FARRER has been appointed Reader in Local History in Liverpool University. The post has been specially created for Mr. Farrer, who has edited and largely written the first two volumes of "The Victoria History of the County of Lancaster" (to be completed in seven volumes). Mr. J. A. Twemlow has been appointed Lecturer in Palæography.

MR. A. R. AINSWORTH, B.A., Assistant to the Professor of Greek in Edinburgh University, has accepted a post under the Board of Education.

MR. H. J. THOMSON, M.A., has been appointed Assistant to the Professor of Humanity in St. Andrews University.

THE Senior Science Mastership at Clifton College is vacant through the lamented death of Mr. W. A. Shenstone, F.R.S., who had held the post since 1880.

A HEAD MASTER (graduate) is required for the Wirksworth Grammar School (co-educational). Apply to the Clerk to the Governors by March 25.

A HEAD MASTER (graduate) is required for Wells Endowed Secondary School. Apply to the Secretary to the Governors of the Blue Schools, Wells, Somerset.

A HEAD MASTER is required for Heath Grammar School Halifax. Apply to Mr. N. B. Spenser, C.A., 1 Harrison Road, Halifax, by March 3.

MR. H. H. ROBJOHN, B.Sc., formerly Principal Assistant in the Higher Department of the Office of the Kent Educa-

tion Committee, has been appointed Head Master of the Technical Day School, Napier, N.Z.

MR. J. B. CLARK, M.A., Chief Assistant Master, Heriot's Hospital, Edinburgh, has been appointed Head Master, in succession to Dr. Lowe (retired).

MISS MARGARET ANDERSON, B.Sc. Lond., late assistant mistress, Blackheath High School for Girls, has been appointed Head Mistress of the Girls' Public High School, Bridgnorth.

A HEAD MISTRESS (graduate, or equivalent) is required for Wallasey High School for Girls. Apply to Mr. F. W. M. Wilson, 8 Cook Street, Liverpool, by March 15.

A HEAD MISTRESS is required for the Chelsea Secondary School for Girls (Hortensia Road). Apply (on official form) to the Clerk of the L.C.C. by March 16.

MR. OSCAR BROWNING has resigned his Lectureship in History and Economics at King's College, Cambridge, and is succeeded by Prof. Chapman, of Leeds University, Fellow of King's.

Literary Items. "COLERIDGE'S LITERARY CRITICISM," with an introduction by Prof. Mackail, is about to be added to the "Oxford Library of Prose and Poetry." The minor works of Tacitus, translated by Mr. W. Hamilton Fyfe, will also be issued immediately in the "Oxford Library of Translations."

MESSRS. GEORGE PHILIP & SON will shortly publish the second part of "A Rational Geography," by Ernest Young, B.Sc., constructed on the most modern lines and fully illustrated with maps and diagrams.

MR. FISHER UNWIN is publishing a new translation of "The Tragedies of Seneca," by F. J. Miller, in blank verse, the choruses in lyric metres. Prof. John M. Manly contributes an introduction estimating the influence of Seneca's tragedies upon the early English drama.

THE Bookseller Jubilee number contains, in addition to the usual information, a number of very interesting articles bearing mostly on the history of the trade, with many photographs of well known publishers and booksellers.

Child Life has somewhat altered its old form. The contents are as varied and practical as ever.

General. THE Bedford Head Meetings of the Assistant Masters have been revived at the London Day Training College in Southampton Row, the Association and the College co-operating. Such "free and frank discussion" is very valuable, and we share the hope of Prof. Adams "that the meetings will bring together many of the educational forces in London."

A GIFT of £200 a year for the next ten years from the Drapers' Company, with £300 a year now paid to the Lecturer in Botany, will enable Cambridge University to found a second Professorship of Agriculture and retain the services of Mr. R. H. Biffen, at present University Lecturer.

### SUGGESTIONS FROM AMERICA FOR ENGLISH EDUCATIONISTS.

At the Evening Meeting of the members of the College of Preceptors on Wednesday, February 19, Prof. ADAMS in the chair, Mr. F. CHARLES, B.A., read the following paper:—

A year ago I was in America for nearly three months, when I spent the whole of my time studying the educational conditions and methods of our American cousins, visiting schools, attending teachers' meetings, taking part in conferences, and interviewing employers. I visited Washington, Annapolis, and Westpoint, where I studied the educational preparation for the services—Army, Navy, and Civil Service; I visited Indianapolis and Elyria, where I inquired what the municipality was doing in the cause of education, so that I might compare with towns of like size in England; I visited Chicago, Cleveland, and New York, where I devoted myself to the experiments now being conducted in those towns—experiments which I believe are the best of their kind.

In such a visit it is impossible to get a general idea of America or American education. America is too vast; and, further, every State has its own laws, and every town its Education Committee. The Education Bureau at Washington has no administrative power; it is comparable, not to our Board of Education, but to the Inquiries Department; it collects and distributes information. When, therefore, I speak of "American" you must understand that what I say is limited to those parts I saw. It may, but it does not necessarily, apply to other towns or other parts of the continent.

In those parts were many excellences which we might well emulate, and some excesses we might well try to avoid. When I say "excesses" I do so in all kindness, and not in any spirit of carping criticism; and I think I am saying nothing here that I have not said to, and discussed with, one or other of my kindly hosts on the other side. I learnt something, I think, for committees, governing bodies, teachers, and schools. The public schools—i.e., the schools belonging to the public and maintained at the public expense—taught me more outside the classroom than in it. The public are keen on education, and take care that they get what they want. They believe in education and are willing to pay for it. They will liberally back their opinion of its worth. Indianapolis spends more on education than on anything else; it spends, indeed, three times as much as on any other department; one-third of its municipal income is devoted to its schools. Nottingham, a city not backward in educational enterprise, spends less than one-sixth of its income on its schools.

Education is increasingly free from other considerations. At Indianapolis—to cite it as an example once more—each member of the Committee is required by law to take an oath that, during his term of office, he will not be influenced by any consideration of politics or religion. The Committees are small and business-like—five or six is quite a usual number. They deal with the statesmanship of education and do not attempt any of the details of school management; they appoint two or three experts and hold them responsible for carrying out general instructions. The chief of these—the superintendent—appoints and dismisses the teachers, who have a right to appeal to the Board. The contrast with our own Education Committees is marked; many of them try to do the work of experts; some select text-books, draw up syllabuses, decide what to teach and how to teach it; make all appointments, even the school porter, and consequently get choked up with a mass of detail.

The size of some of the schools is immense; many of the high schools have over a thousand pupils. Now here I do not agree with those who maintain that no school of over four or five hundred can be efficient. Some of those huge schools seem to me to prove the contrary. It, of course, means that the head master cannot know the development of each pupil at first hand. But that disadvantage is quite overcome where the tutorial system and the general class system are working side by side. To the tutor, house master, or nursing father, the head may devote the charge of all pupils entering at one time. Thus Dr. Buchanan, at De Witt Clinton, who has just adopted this system, has eight assistants each in charge of a half-year. In this way the teachers are kept much more closely in touch with the life of the school; their interests cannot become centred in one class or one subject; and, further, it gives him excellent practice in school management.

The size of the school makes for economy and not necessarily for efficiency, and economy in buildings is not sufficiently con-

sidered. Committees in America are like committees in England—they like to see something for their money; they are willing to spend on buildings—on blackboards even—but not on men. There, as here, salaries must be increased, and largely increased, if suitable men are to be secured to do the work. Here the work is becoming more arduous; more work, better work, and better qualifications are being required, but for salaries which do not increase as fast as the cost of living. Though in the matter of salary the American teacher is no better off than the English one, in the matter of tenure he has the advantage. He is recognized as existing—he does know whom he serves.

The cost of buildings and equipment naturally leads to thoughts on manual training. Here, I think, we might take a lesson, but at the same time a warning. We do not devote enough attention to it; the American devotes too much. It becomes engineering. It appeared to me that the tendency is to pay attention to the technique, to the finish of the articles made rather than to the education of the maker. The practical work overshadows the English and literary work—e.g., in a group of twelve manual training high schools one-third of the whole time is given to practical work. Better educational results are obtained where the manual training is not allowed to dominate, where original designs roughly worked out take the place of good machines and beautiful furniture of finished workmanship, where the education is the well balanced training in expression by words, pictorial representation, material construction, and musical sounds.

The American teacher always welcomes criticism; he is not afraid of talking shop, and freely and frankly discusses any criticism passed upon him. He has indeed an inordinate thirst for criticism. I was often a prey to this thirst. Once I was inveigled to a meeting of teachers and persuaded to say to them together what I had said to some of them singly: they wanted criticism, not invited flattery. I felt that the boys were not doing all they could, and said so. I suggested three causes: parental control, the presence of girls in the classes, and the high proportion of lady teachers. All agreed to the first. The second was keenly debated, and the balance of opinion was certainly in favour of the cause suggested. Work sufficient for the girls was not enough to keep the boys busy, while enough for the boys was far too much for the girls, who pay greater attention to details and are more conscientious. Plain speaking on the third point was a little difficult where perhaps two-thirds of those present were lady teachers. However, all agreed that they were dependent on the chivalry of the boys, and that, at times, it breaks down.

The evil effects of direct parental control are many and far-reaching, especially where the children have more and more influence over their parents and so over the schools. The authority of parents over children seems to me to be disappearing faster in the States than here; and instances are not wanting to show that here it is disappearing far too quickly. In one town in which school ended at 12.30 the children were agitating—or making their parents agitate—for the reduction and limitation of home work which had reached the alarming total of ten hours a week!

It gives rise, too, to seeking after popularity. A teacher who is not popular must go. It is a force, then, which helps the tendency to make everything easy for the children, to smooth away their every difficulty—a marked contrast to the old and robust method which built up strong characters. Now the ways of learning are paths of pleasantness, and the result is a race of youthful mental Epicureans before whom we put their mental pabulum in such a peptonized form that no effort on their part is necessary to digest it. Their work is done for them, and they have nothing to do but to take it or leave it; to remember or forget. We, in England, are doing much the same thing; we do not swing so easily as a younger nation, but, once well started, it takes more to stop us. In the past most of the work in the classroom was done by the pupils; now too much is done by the master. It may help pupils to pass examinations, but it does not enable them to think for themselves; and our object is not to instil into them as many facts as possible, but so to train them that they can work and think, and so acquire facts for themselves.

The causes and the effects of the very large proportion of lady teachers are, too, matters of great interest to us at this time, when the supply of well qualified men teachers has practically stopped, or, at any rate, is far below the demand. The common cause in the two countries is money. In America commercial prosperity and natural resources are so great that men of quite ordinary capacity can make fortunes with ease in business, and this naturally

diverts them from a calling in which by steady work they can earn but a competence. Women will work for smaller salaries than men, and they are not so averse from remaining in one place, steadily working on, as the American man; his life must be one of continual movement. It has, then, become a question whether it is better to employ the weaker man- or the stronger woman-teacher. The decision has been so often in favour of the latter that masculine influence is being driven out of the classroom, until, at the last return, 73 per cent. of the teachers in the public schools in the States are women.

Two very apparent advantages are enjoyed by the American schools. One is the regular and infrequent admissions; all pupils come in at the beginning of one of the two semesters; they come in uniform in age and fairly uniform in attainment. The other is absence of overloading. The primary and grammar grades are satisfied with a few subjects well taught. The curriculum of the high schools is kept within such bounds that each day's time-table is the same, though the English of one day may be different from that of another; one may be an author, while another is oral composition. Mathematics on one day is algebra, and on another is geometry. Again, the subjects of one year are not those of another; French, for instance, may not persist through the four years of a high-school course, but through two only. The result is that, at a given age—say, eighteen, the year in which the high school course is generally completed—the children know less than children of the same age in England; but whether this disadvantage is not more than compensated by their greater freshness and capacity for applying and increasing what they know I am not prepared to say. At any rate, it suggested to me that our curriculum should be unloaded; for we want to educate, to enable to learn, not to cram in the maximum number of facts in the minimum of time.

The work of the private schools, or of those schools which are not directly under State or municipal control, is more characteristic. My visits to these were not in any sense planned; but wherever I was in reach of a school which had a reputation for excellence in any one branch, which had an undoubted speciality, I made an opportunity to see that speciality and learn from it. Schools of this type are not nearly so much handicapped by the influx of foreigners as the public schools; in them are found a much more homogeneous race, though the percentage of American children of American parents is very small. At Washington, I was told, was the best "finishing" school in the States. I went rather expecting to find smart society ladies covering ignorance with a veneer of accomplishments. But far from it. I found an American school that had "struck culture." I found, too, the ideal solution to the modern language problem. Small classes, under the care of accomplished specialists, were treating French texts just in the same way as they would English texts in a literature lesson. A passage was read without comment; then grammatical points, word forms, and syntax were discussed where necessary. Next came questions on the subject-matter, and, finally, the characters of the individuals as evidenced in the passages read. The other work I saw was just as sound, and I came away satisfied that that finishing school undoubtedly stood for culture and refinement.

The Ethical Culture School in New York is so well known that I need only remind you of its aim—to bring to consciousness the things present unconsciously in the school atmosphere, and so, in place of vague, unstable sentiments, to build up definite concepts of right and wrong. That, then, is what the school stands for; but it offers another suggestion. It makes all anniversaries and festivals educational opportunities. The element of show is, as far as possible, eliminated. The celebration is in school hours; the school forms the largest part and the chief part of the audience. All departments work together with the common aim of thanksgiving or of suitably calling to mind the great men who are gone. In these celebrations are found opportunities of natural co-ordination very different from the far-fetched and strained correlation so often apparent. Christmas was celebrated by the whole school. The high school wrote the book from "Sir Roger de Coverley" papers, weaving in Christmas material from "Silas Marner," "Christmas Carol," "Bracebridge Hall," and "Lorna Doone." The illustrative material which realized for the eye the rite and pageant of which the story-tellers told—waits, mummers, boar's head procession, &c.—was contributed by the other grades, each one of which had made a short study of some one Christmas custom. The elements most mischievous and most difficult to avoid are show and advertisement—they are definitely contrary to true educa-

tion—so the celebration had better be omitted than used to attract attention.

The ideal of the Francis Parker School at Chicago can be described, I think, by "practice rather than precept." The children there are evidently living rather than learning to live. There is what appears at first sight chaotic freedom. Formal lessons are not the rule: arithmetic, for instance, has no place for itself, but, when required for calculating the cost of seeds or the price of garden produce, it is introduced incidentally. Under such a regime no definite conclusions could possibly be drawn in the short time at my disposal; but it was clear from conversation with the pupils that admirable work was being done in an original way—a way which seems to eliminate a large part of the drudgery of learning. My one doubt is whether the strength of character which results from unattractive, unpalatable tasks faithfully performed could be derived from such a training.

The University School, Chicago, has for its speciality the science of education. Its continual study is what to teach and how to teach it. Experiments are tried under the best conditions and the results very closely observed.

Now, to all these schools one characteristic is common: every one of them stands for something, and for something definite; and here, to my mind, is the opportunity of the private schools. Let each one of them take care that it stands for something, has a particular excellence of its own—modern languages, practical work, freedom of life still under authority, wide reading of the best authors, power of speech, wealth of imagination. To stand for something is not enough; it must take care that we know it does, not by advertisement, not by asseverating that it does, but by its products and by the valuable lessons it teaches to those interested in education. How are those lessons to be taught? How is the true value to be estimated? The only way evident to me is by inspection. The excellence may be there, but the hall-mark of that excellence should be there also. Insist on inspection and recognition.

For conclusion, let me sum up as in a manual of "Do's" and "Don'ts." *Do* remember that the children are the first consideration: that they must be educated, not laden with a number of facts, and that education is the work of teachers rather than of Committees and organizers. If you are a member of the public, of a Committee, or an organizer, *do* make it possible for the teacher to give his best energies, free from gnawing poverty and insecure tenure, to this work of education. *Don't* co-educate. If you are a parent, *do* keep some authority over your children; co-operate with the school in their development. *Don't* throw on it your parental responsibility. If you are a teacher, *do* be keen; *don't* become ratty, *don't* peptonize.

And, finally, *do* you who are here set aside for a time British reserve, and discuss with American candour some of the points that I have tried to set before you.

### THE WINTER MEETING FOR TEACHERS

THE following is a summary of the lectures on "The Use of the Voice" by Dr. W. A. Aikin; on "Preventable Physical Defects of School Children" by Dr. H. E. J. Biss and Dr. R. J. Collie; and on "Plato" by Mr. E. D. A. Morshead, which we were unable, through exigency of space, to insert in the last number:—

#### THE USE OF THE VOICE.

Dr. W. A. Aikin dealt with this subject in three lectures, under the headings (1) The Principles of Vocal Sound, (2) The Cultivation of Voice Organs, and (3) Speech in its Application to Teaching. He insisted upon the necessity of teachers knowing something of the general principles of vocal sound; for they not only had to cultivate in themselves the best possible habits of speaking, but they also had to cherish the good and eradicate the bad in the speech and pronunciation of the thousands of children who relied upon them for instruction. To teach these principles and to show how they were put into practical use was the function of the science of phonology. On the principle that the act of breathing-out was solely responsible for the force which produced the sound of the voice, it was necessary to have as large a volume of air to use as could be conveniently and quickly taken in, as well as the proper control to regulate its output. For this reason central breathing was advocated, in which the greatest expansion took place at the level of the lowest part of the sixth rib. This ensured the full expansion of the ribs, and especially of the lower ones, and a proportionate descent of the diaphragm, involving expansion of the upper part of the abdomen above the waist only. In order to maintain control of the breath it was advisable to keep the ribs elevated while elasticity and abdominal muscles replaced the diaphragm. The

expanded position of the ribs also assisted resonance by its association with the expansion of the chamber in the neck. The act of phonation was then brought about by the simultaneous onset of the breath and the vocal reed, when the vocal cords were made to vibrate by their own complete approximation, while breath pressure acted upon them from below. The method of onset called "the shock of the glottis" was altogether inadmissible, and should be regarded as an unnatural spasm, however slight, both unnecessary and unphonological, besides being distinctly harmful to the organs themselves. Particular stress was laid upon the subject of resonance, and the lecturer enjoined a careful study and practice of the principles of the resonator scale, an arrangement of vowel sounds according to their resonant notes in the whispering voice, by which the open mouth, forward tongue, open throat, and expanded neck are associated with all the positions of the organs of speech. The double nature of the resonator was shown to indicate the fact that the mouth cavity is more concerned in the differentiation of the vowel sounds, while the neck cavity has more to do with the total resonance in the sonority of the voice. The general advice given, in conclusion, was that teachers should not bend over their desks when speaking, but either stand or sit up in a position favourable to central breathing; that they should feel that the output of breath is responsible for the sound they are making, especially in the proper emphasis and continuity-to-the-end of their phrases; that they should pitch their voices low, and keep their articulation free and far forward in the mouth, relying for resonance upon the neck expansion which goes with the elevated ribs; that they should always breathe through the nose, with the mouth closed when not actually speaking, and cleanse their throats with very mild gargles and lozenges after sitting in badly ventilated and dusty classrooms. The lectures were illustrated by diagrams and examples.

#### PREVENTABLE PHYSICAL DEFECTS OF SCHOOL CHILDREN.

##### THE CARE OF THE EYES.

The lecturer, Dr. Hubert E. J. Biss, laid stress on the word "preventable" in the title, because practically all eye defects are either preventable or capable of being arrested in early life if recognized promptly. It was pointed out that the eye is the most important channel of access to the brain, and therefore the chief factor in education. Defective eyesight must, therefore, impair the value of all instruction conveyed through the eye to the brain. A brief description of the structure of the eye was given, emphasis being laid on the plasticity of the organ and the facility with which it responds to favourable or adverse influences. The mechanism of the eye was dealt with and binocular vision explained, and it was shown that three muscular efforts are involved in near vision—namely, those exerted by the ciliary muscle in altering the shape of the lens, by the iris in contracting the pupil, and by the internal recti in convergence. Muscular fatigue was the result of effort, and near vision involved, therefore, weariness of the muscles cited, together with derangement of the circulation in the eye, and even lifelong alteration of its shape. The differences between the eye of the adult and that of the child were pointed out, the extra strain involved in the child by both near and distant vision being strongly insisted upon. The various forms of defective vision and muscular action (squint) and their appropriate correction by rest and glasses, were then dealt with, the claims of opticians, chemists, and other unqualified persons claiming to prescribe spectacles being discounted. The lecturer then spoke of the precautionary methods which should be adopted in schools, the methods of lighting classrooms, of constructing school furniture, of printing school books, of preserving proper positions, and of preventing fatigue of the eyes in writing and sewing being described, emphasis being laid on the importance of preserving a distance of twelve inches as the nearest working point for the child's eye. It was then shown how, by test-types, any teacher could examine a child's eye for defects, and how the results could be expressed in conventional fractions. Finally, by reference to the mass of statistics prepared by Dr. Kerr, of the London County Council, the lecturer demonstrated how frequent serious defects of vision are among school children, especially in the younger ones, and what grave impediments to progress in education and to bodily and mental health such defects are. The lecture was illustrated by diagrams, sections of the eye, and various models.

##### THE CARE OF THE EARS, SKIN, ETC.

The lecturer, Dr. R. J. Collie, stated that 60 per cent. of those who are deaf were either congenitally so or the disease had been contracted in early infancy. Dr. Kerr's estimate that 1 per cent. of the scholars of the elementary schools in London have discharging ears was referred to, and the frequency with which inflammation of the lining membrane of the brain supervenes as a direct consequence emphasized. The methods whereby teachers may test the children's hearing were then described, and the dangers attendant upon improper methods of removing foreign bodies from the ear demonstrated. The frequency with which adenoids, or post-nasal growths, occur in young children was pointed out. The fact that adenoid tissue is merely an overgrowth of what is normally present was insisted upon. The symptoms of this condition are defective nose-breathing, snoring respiration, sluggish and delayed mental powers, loss of resonance, deafness, ear-ache, &c. The impor-

ance of early removal, and the evils resulting from neglect of what is comparatively simple operation, were mentioned in detail, and their effect upon mental development specially emphasized. A brief description of acute rheumatism as it affects children was given, and the relative frequency of heart complications in childhood compared with their manifestations in the adult was fully discussed. The fact that the absence of pain in young children so frequently leads to acute rheumatic fever being unrecognized, paved the way for the onset of heart complications, and it was made clear that many cases of heart disease in adults originate in this way. The so-called growing pains were shown to be rheumatic, and the foolish notion of "hardening" children was condemned. Rickets was then briefly discussed. It was shown that it is essentially a disease of town life, bad food and bad hygiene being the chief factors in its causation.

##### HEALTHY AND UNHEALTHY BRAIN ACTION.

It was pointed out by the lecturer, Dr. R. J. Collie, that in all organisms, from the highest to the lowest, the nerve centres are made up of practically nothing else than groups of nerve cells with their communicating neurons, and that these nerve centres are acted upon by their environment—*e.g.*, vibrations of light, waves of sound, muscular sense. Nerve impulses were accompanied in the brain by changes of consciousness. Mental action was necessarily related to brain action, and was, indeed, limited by it. The intimate nature of consciousness had never been rationally explained by any material cause; if the cerebral tissue was working imperfectly the brain function must necessarily be unhealthy. The subject of mentally defective school children was fully considered. It was shown that mental deficiency is essentially a relative term, and the different grades—first, the idiot; second, on the ascending scale, the imbecile; and, third, the mentally defective child—were fully described. Idiots were classified as mental paupers who had practically no assets. The imbecile, on the other hand, was capable of learning such simple rules of life and modes of conduct as enabled him to preserve his own life; while the mentally defective child not infrequently took his place—a lowly one—in the world's work. The origin of mental defect was discussed. It was asserted that in these children the development of mental processes ceased from want of sufficient impetus. The various causes of this insufficient impetus were fully dealt with. Inherited disease did not always exactly reproduce the same disease in the child, but only an organic disposition. An insane father, it was stated, not infrequently begets an eccentric son; the eccentric son, on the other hand, may reproduce one or more mentally defective children. The causes of mental defect, according to the statistics of Drs. Beach and Shuttleworth, were fully examined. Moral insanity was described as the disorder of the affections and feelings—*i.e.* the moral powers—as opposed to the affections of the understanding and intellect: children whose irresistible streams of immoral tendencies ran freely along the rugged line without the least resistance. A large proportion had inherited mental weakness; they were moral imbeciles; they had inherited some obscure intellectual disability; they would never be like other children. If they lived to be men and women, they broke the law and were secluded, or went about amongst their fellows "debasement the moral currency." The audience was appealed to to remember that these people were not sane; that their lower impulses were not inhibited and controlled by the higher; and an appeal was made to treat not only children, but any one with moral insanity, in a spirit of patient compassion.

##### PLATO.

The lecturer, Mr. E. D. A. Morshead, commenced by pointing out the debt due to Homer from the Athenian poets—Pindar and Aeschylus in particular; and then dwelt upon Plato's philosophy as a culminating influence—but an influence largely based upon the theological and mythological elements in the "Iliad" and "Odyssey," and on the works of Pythagoras of Samos—those particularly in which that philosopher claims to have originated the doctrine of the transmigration of souls in successive bodies of men and of animals—a thought touched upon, in later times, by St. Paul, and afterwards by Marlowe and Shakespeare; but potent in the mind of Plato, who is the master of Greek prose writing, and particularly of that style which we call "dialogue." Aristotle followed him as pupil and as critic: the lecturer dwelt at some length on the likeness and the differences of these two great thinkers, and pointed out the unique influence of Socrates upon Plato, who almost effaces his own personality in representing that of his teacher. The most famous of Plato's dialogues were summarized, special reference being made to the "Republic," the "Apology," the "Gorgias," the "Phaedo," and to the curious fragment called "Critias." Allusion was made to the Platonic doctrine of transcendental ideas, and his argument, put in the mouth of Socrates, for the immortality of the soul, and a short consideration of its cogency, in the light of modern times. The *leit* of the dialogues was illustrated by a humorous scene from the "Symposium"; and an endeavour was made to show that Plato's doctrines are much more allegorical than is often supposed—an illustration being given by the Platonic views of female education. Finally, a brief sketch of the Neo-Platonic philosophy and its decay was introduced, in a reference to the novel "Hypatia," and to the visionary rhapsodies of Plotinus and his followers. The lecture closed by a brief reference to the allegory, if allegory it is, of Plato's own death.

COLLEGE OF PRECEPTORS.—TEACHERS' DIPLOMA EXAMINATION.

CHRISTMAS, 1907.

THE Christmas Examination commenced on the 30th of December and was held in London and at the following Local Centres:—Anking (China), Banchory, Birmingham, Bristol, Calcutta (India), Dublin, Edinburgh, Leeds, Liverpool, Lucknow (India), Manchester, Newcastle-on-Tyne, Plymouth, Rawal Pindi (India).

The total number of candidates examined was 513.

The following are the names of the candidates who passed in the various subjects: (*hon.*) attached to a name, or to a letter denoting a subject, indicates that the candidate obtained Honours in the subject:—

**Theory and Practice of Education.**

**FELLOWSHIP.**

Babb, F. J.  
Brett, F. A. B.  
McCarthy, W.

**LICENTIATESHIP.**

Banbery, H.  
Burlington, Miss M.

## MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on February 15. Present: Dr. Wormell, President, in the chair; Prof. Adams, Prof. Adamson, Dr. Armitage Smith, Mr. Barlet, Rev. J. O. Bevan, Rev. J. B. Blomfield, Mr. Bowen, Mr. Brown, Mr. E. A. Butler, Mr. Eve, Mr. Hawe, Mr. Holland, Miss Jebb, Mr. Kelland, Rev. R. Lee, Rev. G. E. Mackie, Dr. Maples, Mr. Milne, Dr. Moody, Mr. Morgan, Mr. Pinches, Miss Punnett, Mr. Rule, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Starbuck, Rev. J. Stewart, and Mr. White.

The minutes of the last meeting were read and confirmed.

Diplomas were granted to the successful candidates at the Christmas Examination of teachers (see list, page 134). The diploma of Licentiate was also granted to Miss A. Wall, who had satisfied the prescribed conditions.

Mr. Brown was appointed one of the representatives of the College on the committees of the Women's and Men's Joint Agencies, respectively.

It was resolved that a memorial be presented to the Lord President of the Council and to the President of the Board of Education, reciting the part that had been taken by the College in promoting the Registration of Teachers, and praying that in any Registration Council to be constituted under the Education (Administrative Provisions) Act of 1907, adequate representation should be given to the College.

The Report of the Finance Committee was adopted.

The Report of the Examination Committee was adopted. Dr. A. J. Greenish and Dr. W. G. MacNaught were appointed Examiners in Theory of Music; Mr. C. H. Swinestead and Mr. H. W. O. Hagreen were appointed additional Examiners in Drawing, and Mrs. Pillow was appointed one of the Examiners in Domestic Economy.

The Personation Committee reported that the steps taken by direction of the Council had resulted in the conviction and punishment of the offenders in the personation case which had occurred at the College Certificate Examination at Inverurie in June, 1907, fines of £5 having been imposed on the personator and the man who was personated. The report concluded with a strong expression of satisfaction with the ability and energy shown by the College Solicitor in his conduct of the case. The report was adopted, and it was resolved that thanks be given to the Solicitor, Mr. H. W. Rydon, for his services.

Sir Philip Magnus, M.P., was elected President of the Council; and Mr. E. A. Butler, the Rev. Canon Bell, and Prof. Adams were elected Vice-Presidents.

Mr. H. W. Eve was re-elected Dean, and Dr. Armitage Smith Treasurer of the College.

The Moderators, Examiners, and Revisers for the year 1908 were appointed.

The Standing Committees were appointed, with their respective Chairmen.

The following persons were elected members of the College:—

Mr. F. G. W. Brown, B.Sc. Lond., L.C.P., 35 Wyatt Road, Forest Gate, E.

Prof. W. E. Dixon, M.A. Camb., M.D., B.Sc. Lond., King's College, London.

Miss D. C. Harris, L.C.P., Clovelly House, Grove Place, Port Talbot.

Mr. R. S. Gough Paynter, A.C.P., Grammar School, Windermere.

Mr. G. F. Phillips, B.Sc. Lond., F.C.P., F.C.S., Hartley University College, Southampton.

Mr. H. S. Warren, Belle Orchard, Ledbury.

The following books had been presented to the Library since the last meeting of the Council:—

By Mr. J. JAKEMAN.—Gregg's Shorthand Manual.

By E. ARNOLD.—Johnson's Dramatic Scenes from History.

By G. BELL & SONS.—Hendiam's Translations of Aeschylus' *Eumenides* and *Prometheus Bound*; Nixon's *Junior History of England*; Sinclair's *Third Year's Course in Practical Physics*.

By A. & C. BLACK.—Black's *English History from Original Sources* (1216-1307 and 1603-1660); *Literary Readers*, Book III.; and *Picture Lessons in English*, Book III.

By BLACKIE & SON.—Bagnall and Vivier's *Le Cid* and *Horace*; Baker's *De Vigny's Poesies Choies*, and *Lamartine's Premieres Meditations Poetiques*; Endeocer's *School Course in Physics* (Light and Sound); Hill's *Souvestre's La Loterie de Francfort*, &c.; Washington Irving's *England's Rural Life* and *Christmas Customs*; Mace's *Le Chevalier du Guet*; Major's *Stories to Remember* (Senior Book); Malory's *The Coming of Arthur*; Ogilvie's *Smaller English Dictionary*.

By the CLARENDON PRESS.—Berthon's *De Balzac's Eugénie Grandet*; Gordon's *Scott's Legend of Montrose*; Wilson-Green's *Sisimondi's Marignan*.

By W. B. CLIVE.—*Matriculation Directory*, January, 1908; *University Correspondent*, 1907.

By MACMILLAN & Co.—Fowler's *Gibbon's Age of the Antonines*; Lee's *Seventeenth Century Prose*; Pollard's *Chaucer's Nun's Priest's Tale*; Siepmann's *Short French Grammar*; Topfer's *La Bibliothèque de mon Oncle*; Word- and Phrase-Book for *Un Saint*; Word- and Phrase-Book for *Nicomède*.

By J. MURRAY.—Tischbrock's *Der Neue Leitfaden*.

By G. PHILIP & SON.—Pearce's *Modelling in Relief*.

By BELFE BROS.—Relfe's *Ideal Senior Poetry Book*, and *Exercises in Spelling, Dictation and Composition for Upper Forms*; Carter's *Ezra, Nehemiah, and Esther*; Gorse's *Kingsley's The Heroes*; Perry's *Junior Physical Geography*, and *History of England, 1509-1688*.

By RIVINGTONS.—Glazebrook's *Bible Lessons for the Young*, with Notes and Outlines; Hartog's *Delacourt's Nouvelles et Anecdotes*, Minssen's *La Belle au*

Bois Dormant, and Minssen's *Huit Contes*; Trevelyan and Edghill's *The Beginnings of the Church*.

Calendars of Trinity College of Music; Pharmaceutical Society; University of Liverpool; University of Birmingham; and University College of Wales, Aberystwyth.

## PERSONATION AT EXAMINATIONS.

It cannot be too widely known that to personate a candidate at a public examination is a criminal offence and liable to be visited with severe penalties. At a recent examination of the College of Preceptors held at a centre in the North of Scotland a case of personation was detected, and the personator (a school-teacher) and the candidate personated (a chemist's assistant) were tried for the offence in the Sheriff's Court at Aberdeen on the 31st of January last. Both the accused pleaded guilty. It was alleged on their behalf that they had acted foolishly and thoughtlessly, and that they had no idea of the magnitude of their crime. The Public Prosecutor (Procurator Fiscal) stated that the Lord Advocate, before whom the case had been laid, had instructed the prosecution. Both the culprits were of respectable families and were companions in Aberdeen. It was alleged that the personator derived no personal advantage from the fraud he had undertaken, and the certificate obtained had been handed back. The sheriff said he had some difficulty in giving the offenders the option of a fine: he must, however, make the fine a substantial one, and he sentenced each of them to pay a fine of £5, or to go to prison for thirty days.

## REVIEWS.

### CONTINUATION SCHOOLS.

*Continuation Schools in England and Elsewhere: their Place in the Educational System of an Industrial and Commercial State.* Edited by M. E. Sadler, M.A., LL.D., Professor of the History and Administration of Education in the University of Manchester. (8s. 6d. net. Manchester University Press—Sherratt & Hughes.)

The other month we heralded the appearance of this important volume, and now we simply direct attention to the comprehensive and instructive handling of the subject, taking it for granted that everybody interested in education will master its contents. Prof. Sadler opens the survey with a long historical review of the agencies for further education in England; and the remaining twenty-four chapters deal with particular sections or aspects of the subject in England and abroad. Five of these chapters are also from the industrious pen of Prof. Sadler: they treat of the present position of State-aided evening schools and classes in England and Wales; the organization of continuation schools in Scotland; compulsory attendance at continuation schools in Germany; the trend towards industrial training in continuation schools in New England; and the question whether attendance at continuation schools should be made compulsory in England. In three more chapters Prof. Sadler collaborates with Miss Mary S. Beard: the work of continuation schools in certain rural districts of England (Cambridgeshire, Gloucestershire, Northumberland, Cumberland, Buckinghamshire, Yorkshire East Riding); a summary of returns relating to English employers and the education of their work-people; and a brief review of the aims and courses of study of certain trade schools and pre-apprenticeship schools in England. It is thus seen how deeply Prof. Sadler has stamped his mark upon the history of this profoundly important inquiry. The conditions of Lancashire and Yorkshire centres are pretty fully presented; and comparative views are shown from Denmark (J. S. Thornton), Munich (C. E. Stockton), Switzerland (A. J. Pressland), France (Georges Cahen), and the United States (William Scott and Mary S. Beard). The laws regulating the employment of children and young persons in factories and workshops in the United Kingdom, Germany, and Switzerland have been furnished by the Labour Department of the Board of Trade. A very instructive paper by Mr. C. T. Millis discusses the economic value of trade schools for boys and girls, and the place of such schools in a national system of education. And there are half-a-dozen other chapters that throw much light upon different parts or aspects of the general problem.

We have again and again insisted on the far-reaching importance of the subject, and now there is no doubt about that in the mind of any thinking person acquainted with the facts. The point now is the remedy for the admitted mischiefs, and, as

Prof. Sadler remarks, it is futile to expect any simple or easy remedy. "Whatever is done must necessarily be done in stages, so that the weight of public opinion may go along with new legislation and with the administrative action to which such legislation would lead." That is a very obvious and fundamental consideration, and yet it needs to be persistently emphasized; and it may be added that very much depends upon the lead that is given to public opinion. Prof. Sadler further points out, and again most wisely, that, "in considering what shall be done, we shall not be content to fix our thoughts upon the purely industrial or commercial interests which are at stake," though the importance of these is not to be minimized. "It is the human side of the question that rightly appeals to us with the greatest force."

We are right (says Prof. Sadler), when we discuss it, to think of individual boys and girls whom we know, in circumstances with which we are familiar, and of practical difficulties and opportunities of which we have personal experience. And this leads us to think of the real conditions of employment which lie around us; of the home circumstances of the children as we know them in real life; of the point of view of foremen; of the different ways in which employers regard their responsibilities; and of the actual people (teachers, attendants, clerks, inspectors) through whom, if it further exerts its authority, the State will be bound to act. By seeing things thus in the concrete; by trying to visualize the actual working of suggested plans; by trying to judge how far their requirements could be evaded, and what their unseen and collateral results might be; by realizing the inner differences which distinguish English social life from American or German or French—we may hope to escape from fallacious generalities and to see in fair proportion the part which, in England, legislation can play in social improvements and the parts which must be borne by public opinion, by the action of employers, by the skill and good sense of teachers, and by the personal effort of individuals who bring to social service a shrewd combination of sympathy and science.

Just so. The various chapters of this volume provide an immense mass of information and suggestion. Prof. Sadler narrates the history of the subject in England, and lays down the general and plain principles of practical procedure. Get the facts, and then handle them in the light of English idiosyncrasy and English conditions. The volume represents an immense service to English education, and to the future welfare and efficiency of the nation.

#### THE NEW WORLD-HISTORY.

*The Historians' History of the World.* Edited by Henry Smith Williams, LL.D., with the collaboration of many specialists and with contributions by more than thirty living historical scholars. Vols. XIII. to XXIV. (7s. 6d. each. London: the Times.)

This contingent of a dozen volumes completes the extensive work, whose general characteristics we commented upon in our last issue. Volume XIII. concludes the history of France, from 1815 to the present time, and carries the history of the Netherlands down to 1722. Volume XIV. completes the history of the Netherlands (modern Holland and Belgium), and with Volume XV. sets forth the history of the Germanic Empires. Volume XVI. is mainly occupied with Scandinavia, but also treats of the affairs of Switzerland down to the seventeenth century. Volume XVII. concludes Switzerland, and for the rest is concerned with Russia. The British Empire fills the next four and a half volumes, XVIII.—XXII. (middle), British India and the Colonies occupying the first half of Volume XXII. The United States and Spanish America take us to the end of Volume XXIII. And Volume XXIV. tells the stories of Poland, the Balkan States, Modern Greece, the Turkish Empire, some minor States of North Africa and Central Asia (including mediæval and modern Egypt, Morocco, modern Persia, and the Buffer States of Central Asia), China, and Japan. The comparative amplitude of the space devoted to the British Empire is noteworthy and satisfactory. The bibliographies, chronological tables, maps, diagrams, and other illustrations are most useful; and sometimes, as in the case of Germany, many pages are given to a very serviceable reprint of important constitutional documents. It would be easy enough to point out passages where the best authorities have not been followed, or passages where critical acumen has not been brought to bear upon traditional misconceptions, or views of policy that cannot stand any efficient historical test. But the very nature of the work renders such weaknesses all but inevitable. Accordingly, as before, we are content to accept the positive performance as on the whole very satisfactory in view of the needs of the general reader, and to hope that a call for another edition will lead to a

drastic revision of the inadequate parts. The special oak book-case (over four feet high) is a handsome and substantial receptacle for the library of 25 volumes—light, strong, and artistically designed.

#### THE DECLINE AND FALL OF NATIONS.

*Decadence.* By the Right Hon. Arthur James Balfour, M.P. (1s. 6d. net. Cambridge University Press.)

The Henry Sidgwick Memorial Lecture, delivered at Newnham College on January 25 last by Mr. Balfour, while appropriately of a philosophical cast, characteristically "makes no pretence to be an adequate treatment of some compact and limited theme, but rather resembles those wandering trains of thought where we allow ourselves the luxury of putting wide-ranging questions to which our ignorance forbids any confident reply." Mr. Balfour starts the question of Decadence—political and national decadence—"the decadence which attacks, or is alleged to attack, great communities and historic civilizations." He reviews at some length the commonly enumerated causes of the decline and fall of the Roman Empire, admitting most of them with more or less qualification; but "they obviously require themselves to be explained by causes more general and more remote, and what," he asks, "were these?" These were "Decadence"; and, if the name explains nothing, it may be of some use as "ruling out explanations that are obvious but inadequate." What grounds, then, are there "for supposing that we can escape the fate to which other races have had to submit?" Mr. Balfour offers "some purely tentative observations." Each generation, as it enters on adult life, is the resultant of two factors mainly: physiological inheritance and social surroundings. It is the latter factor in any society—"the physical and psychical conditions affecting the life of its component units"—that is the more susceptible to progress or decadence; and there is a new social force on which "we must mainly rely for the improvement of the material conditions under which societies live"—namely, "the modern alliance between pure science and industry."

If in the last hundred years the whole material setting of civilized life has altered, we owe it neither to politicians nor to political institutions. We owe it to the combined efforts of those who have advanced science and those who have applied it. If our outlook upon the universe has suffered modifications in detail so great and so numerous that they amount collectively to a revolution, it is to men of science we owe it, not to theologians or philosophers. On these, indeed, new and weighty responsibilities are being cast. They have to harmonize and to co-ordinate, to prevent the new from being one-sided, to preserve the valuable essence of what is old. But science is the great instrument of social change—all the greater because its object is not change, but knowledge; and its silent appropriation of this dominant function, amid the din of political and religious strife, is the most vital of all the revolutions which have marked the development of modern civilization.

All honour to science, especially if it is to save us from Decadence. But does not Mr. Balfour strangely minimize the services of statesmen, theologians, and philosophers? There is great temptation indeed to drive home the point of scientific vantage—that science has a single eye to knowledge, fact, truth. But, leaving that aside, one may ask, Where is the saving virtue of science if the statesman is incompetent? And how can the wisest of statesmen even get the opportunity of acting unless he is supported by enlightened and moral constituencies—moral beyond the highest influences of popularized science? Mr. Balfour is acute enough to rate his speculation modestly, as "but an aid to optimism, not a reply to pessimism." The reply to pessimism must await "a sociology which has arrived at scientific conclusions on the life-history of different types of society." The treatment is elusive throughout. The provisional conclusions offered by Mr. Balfour are either obvious or disputable or else too vague to be useful except as broad suggestions.

#### DESCRIPTIVE GEOMETRY.

*The Axioms of Descriptive Geometry.* By A. N. Whitehead, Sc.D., F.R.S. (2s. 6d. net. Cambridge University Press.)

This is the fifth of the excellent series of "Mathematical and Physical Tracts," now in course of issue under the able supervision of Mr. J. G. Leatham, M.A., and Mr. E. T. Whittaker, M.A., F.R.S. Tracts 4 and 5 are both from the powerful pen of Dr. Whitehead and follow the same general plan in their construction. In the former, which has already been favourably reviewed in these columns, the author treated of a body of axioms forming a sufficient basis for the theory of projective geometry—a geometry which, as we know, presupposes the necessary intersection of every pair of coplanar lines. In the

latter, namely, the present tract, the writer commences by stating alternative sets of axioms, which furnish a satisfactory groundwork in the case of descriptive geometry, a branch of geometry in which the existence of pairs of non-intersecting coplanar lines is admitted as possible. The scope of each tract is clearly indicated by the writer, and, consistently with it, he confines his attention to such investigation only as he thinks necessary and sufficient in order to establish the validity of the body of axioms considered. It may be noted that in projective geometry *order* is not the first among the leading principles to claim attention, but in descriptive geometry it acquires primary importance. And hence we find the various methods of introducing it discussed in the opening chapter of the new tract. Answering to Peano's axioms, we have as the central idea the *class* of points lying *between* any two given points. Next arises the consideration of points collinear with the former, but lying *beyond* one of the chosen end-pair, and this, in turn, leads to the conception of the entire straight line as consisting of the pair of defining points and of the three classes of points, one of which lies *between both*, whilst the other two lie each *beyond one* of the given points. Peano's axioms are given in full. Secondly, the author touches on the method suggested by Vailati and Russell. Here the straight line is the field of an *ordered* relation between any two points belonging to that field, and many of the axioms are identical with members of Peano's set. Thirdly, the author draws attention to the method of Veblen, which secures all that is required, whilst it has, moreover, the virtue of introducing simplifications. In accordance with Veblen's system, descriptive geometry is developed from an *ordered* relation consisting of three terms. The corresponding set of axioms is given at length by Dr. Whitehead. In the second chapter the reader is shown the relation between projective and descriptive geometry and the more general character of the former is noted. The treatment of descriptive as a part of projective space is pointed out as the origin of the introduction of the "plane at infinity" into Euclidean geometry.

Dr. Whitehead next considers several preliminary theorems which enable him to proceed in the following chapter to the investigation of the theory of ideal points. Subsequent chapters treat of such subjects as *correspondence, congruence, infinitesimal rotations*, and other topics of equal interest and importance, and it is to be observed that Lie's contributions to the theory of congruence are clearly indicated.

Dr. Whitehead's style is marked by simplicity of language and great conciseness, and his manner of treating his subject is in every way attractive.

## GENERAL NOTICES.

### CLASSICS.

*Aristotle: De Anima*: with Translation, Introduction, and Notes. By R. D. Hicks, M.A., Fellow and late Lecturer of Trinity College, Cambridge. (18s. net. Cambridge University Press.)

"This treatise," says Mr. Hicks, "however inadequate its method and assumptions when judged by the standard of the present day, has nevertheless a recognized place in the early history of psychology, for it is the outcome of a long series of conjectures, inquiries, and provisional hypotheses which occupied men's minds in the infancy of science." Mr. Hicks prints the text mainly after Biehl's critical edition, but with free exercise of his own independent judgment, adding at the foot of the page a very elaborate array of critical notes. He acknowledges handsomely and justly "the great gifts of Torstrik, who, by his insight, candour, and logic, contributed beyond all others to improve Bekker's text of the treatise"; and he may fairly claim a like acknowledgment for his own labours. Opposite the text he has placed an English version, which reads like an English treatise, while skilfully bringing out the meaning of the original, and never degenerates into the "mere medley of specious paraphrase and allusive subterfuge" that he scorns in some of our vernacular renderings. The introduction treats very fully the history of previous speculation of the subject, as well as the principles adopted in handling the text. The notes are ample, filling some 400 of the 700 pages, and they are extremely able and instructive. An extensive index is appended. The work is yet another monumental example of Cambridge classical scholarship and of the technical skill and care of the Cambridge University Press.

*The Odes and Epodes of Horace*. Translated into English Verse corresponding with the original Metres. By John Marshall, M.A. Oxon., LL.D. Edin., Rector, Royal High School, Edinburgh. (2s. 6d. net. Dent. The Temple Greek and Latin Classics.)

Dr. Marshall has been under no illusion as to the extreme difficulty of his task. "The work," he says, "is, in a way, the fruit of forty

years of study of my best beloved author; and in the actual doing of it the translation has occupied most of the leisure of at least ten recent years." Curiously enough, the rhymed translation has been evolved from earlier unrhymed verse, which he at one time held to be the only possible form of even a moderately successful translation. The principles he has imposed on himself are sufficiently rigid, and the difficulty is all the greater when they have to be worked out in English material. The translation is extremely interesting and astonishingly successful. Every stanza is marked by thoughtful and thorough study and by deft manipulation of the English. The Latin and the English are conveniently placed on opposite pages. A charming portrait of Horace forms the frontispiece.

*Aeschylus*.—(1) *Prometheus Bound*. Translated by Robert Whitelaw. (2) *Agamemnon*. Translated by John Conington. Both with Introduction and Notes by J. Churton Collins, Litt.D., Professor of English Literature in the University of Birmingham. (1s. net each. Clarendon Press.) (3) *Prometheus Bound*, and (4) *The Eumenides*. Translated from a revised Text by Walter Headlam, Litt.D., Fellow of King's College, Cambridge. (1s. each. George Bell.)

If Conington evinces more poetical insight and skill, yet Whitelaw's rendering is scholarly and agreeable, and both versions are well worth reproduction. The full introductions and judicious notes supplied by Prof. Collins are very helpful for the purpose of the series—to present Greek masterpieces to be studied as English works in schools, Extension classes, &c., and by private readers. Dr. Headlam's translations are based on a careful critical revision of the text, and represent the original with scholarly fidelity and literary skill.

### MATHEMATICS.

*A Manual of Geometry*. By W. D. Eggar, M.A. (3s. 6d. Macmillan.)

The prescribed course is essentially practical and experimental, and, if followed in the best way, must ensure a thorough grounding in the principles of elementary geometry. It is intended to meet fully the requirements of candidates for Junior University, for Matriculation, and for University Local Examinations. The author, in giving only skeleton proofs of the leading theorems, follows the principle adopted by those teachers who try to encourage the members of a class to fill in for themselves the details of the demonstrations. The method has much to recommend it, provided that the teacher is always exercising the necessary supervision; otherwise, in the case of the less eager and less intelligent pupils, the note-books may well prove but a sorry substitute for the reliable text, of which they are supposed to take the place, for purposes of revision. It is pleasant to note Mr. Eggar's plea for the retention of Euclid's "Elements" as a University subject. We quote his own words:—"Though it is easy to find defects in Euclid's work, it is not easy to make out a course of geometry superior to Euclid's as a system of logic."

*A First Geometry*. By W. M. Baker, M.A., and A. A. Bourne, M.A. (1s. 6d. Bell.)

A small volume, very suitable for the part assigned to it by the authors, namely, that of providing a purely preliminary course in geometry. The work which is suggested is almost entirely experimental, and appears well calculated both to create interest in the subject and to impart a stock of valuable knowledge of the elementary truths of geometry and of the properties possessed by some of the simple geometrical figures. The usefulness of the course is enhanced by the fact that the investigations in general may be carried out without the aid of elaborate apparatus—nay, more, the beginner learns how to manufacture simple instruments sufficient for the successful performance of various practical experiments. The text is good, but there are sections which require some revision.

*A Heuristic Arithmetic, Part I*. By Clifford Granville, B.A., and C. E. Rice, M.A. (2s. 6d. Horace Marshall.)

The reader is almost wholly concerned with the first four rules (simple and compound) of arithmetic and with the best way of imparting a knowledge of them. Every teacher will not perhaps be ready to adopt each individual method, yet it will be generally conceded that the lines followed are sound and excellent. The ideals are good and the principles involved and partially implied in the title of the book may be briefly summed up thus: Educate in the best sense of the word by obtaining as much information as possible from the pupils themselves; bring thought and experience to bear when determining the order of dealing with the subject; in general, treat each process by stages. At the first stage the teacher is advised to appeal entirely to concrete number and the sense of sight; at the second the imagination of the pupil is called in to assist partially concrete illustrations; finally, teacher and pupil examine the subject in a manner essentially abstract in character.

### SCIENCE.

*Inorganic Chemistry*. By E. I. Lewis, B.A. Cantab., B.Sc. Lond., Assistant Master at Oundle School. (6s. Cambridge University Press.)

Mr. Lewis's book has grown in a somewhat unusual way: it is "the outcome of an attempt to provide a chemistry course for a class of

boys of whom some had been promoted from a lower science set and the rest had come over from the classical side," so that "the course had to be both a revision and an introduction." He thinks, however, that the inevitable restrictions worked out eventually "altogether advantageous." "Nearly every lesson begins with the study of a simple reaction;" and "this is followed by a discussion involving the suggestion of further experiments." It is interesting to learn that "the boys, in class, by their own reasoning, questioning, and suggestion, led Mr. Lewis to alter radically the plans of many chapters." This looks like getting to business. In Part I. exercises and problems are appended to each chapter, and the answers are given. Part II. is for senior forms, with more information, to support the arguments. There are over 130 figures. The work is fresh, lucid, and practical.

(1) *The New Matriculation Light*. (2s. 6d.) (2) *The New Matriculation Heat*. (2s. 6d.) (3) *The New Matriculation Sound*. (2s.) All by R. W. Stewart, D.Sc. Lond. (Clive.)

These volumes are admirably adapted for the purposes of the London University Matriculation and other similar examinations. The treatment is simple and experimental, and in accordance with the best methods. There is abundance of exercises (with answers) and of illustrations. Thoroughly good text-books.

A second impression of *The Age of the Earth and other Geological Studies*, by Prof. Sollas, is published by Mr. Fisher Unwin (6s. net). Extremely able, varied, and charming discourses.

Messrs. Macmillan issue a third edition of *Modern Views of Electricity*, by Sir Oliver Lodge (6s.). The work has been revised to date. "Some new lectures and articles have been added; one of them dealing in a semi-philosophic way with the Interstellar Ether, and two others giving a popular account of recent discoveries as to the probable nature of matter, and some idea of the atomic theory of electricity." At once scientific and popular.

*The Elements of Electrical Engineering*, by Tyson Sewell, A.M.I.E.E. (7s. 6d. net, Crosby, Lockwood, & Co.), has been revised and enlarged in a fourth edition, with 277 illustrations. The new additions largely add to its value. A very serviceable work.

*A Key to Elementary Dynamics*, by W. M. Baker, M.A., Cheltenham College (10s. 6d. net, George Bell), will be extremely helpful both to teachers and to students. The solutions are masterly, and the methods are always instructive.

#### MODERN LANGUAGES.

*Heine's Book of Songs*. Translated by John Todhunter. (3s. 6d. net. Clarendon Press.)

"Every modern translator," Mr. Storr remarked in his brilliant presidential address to the Modern Language Association, "has tried his hand on Heine's lyrics, but the wise have followed the example of Victor Hugo and kept their translations in *scrinio*." Shall we infer that Dr. Todhunter is not among the wise or that Mr. Storr spoke before having studied Dr. Todhunter's translation? Or may not both be in a sense justified? Dr. Todhunter probably falls short of Mr. Storr's standard, but yet has achieved a success that fully justifies publication. The attempt is extremely difficult: "Heine invites and eludes translation." Dr. Todhunter says his endeavour "has been, while keeping as closely as possible to the sense and sentiment of the original, to follow those delicate changes in rhythm which Heine uses so daintily, stanza by stanza, while keeping within the bounds of his metre, and on which so much of the emotional expression depends." These lines, we think, are right; but the manipulation of the English is exceedingly difficult. A good example is "The Grenadiers": Dr. Todhunter follows the "delicate changes in rhythm" with remarkable skill, and yet the language does not permit him to do more than furnish a pale reflection of the music and feeling of the original. Still, these translations offer much of interest to the German scholar, and to those that do not know the originals they will convey as good a general idea of Heine's songs as they are ever likely to get in English. For the most part they read like English poems, and it is only the comparison with the German that modifies their effect. Mr. Frowde has done well to include the volume in his interesting series of translations.

*Bibliotheca Romanica*. (8d. net each volume in stout cartridge paper wrappers; or 1s. net cloth. London: Chatto & Windus. Strassburg: J. H. Ed. Heitz.)

The "Bibliotheca Romanica" furnishes a series of Romance texts, with prefaces and occasional notes. It is in four divisions, presenting masterpieces in four Romance languages. The volumes are in small octavo (about 6 x 4 inches); the type, though small, is remarkably clear; and the texts follow the best editions. Of the first division—"Bibliothèque Française"—we have several specimens: (1) *Le Misanthrope* (Molière); (2) *Les Femmes Savantes* (Molière); (3) *Le Cid* (P. Corneille); (4) *Discours de la Méthode* (Descartes); (5) *L'An Deux Mille* (Restif de la Bretonne); (11) *Athalie* (Racine); (18, 19, 20 together) *Mon Oncle Benjamin* (Claude Tillier); (23, 24) *Le Barbier de Séville* (Beaumarchais); (26, 27, 28) *La Nuit Vénitienne*, *André del Sarto*, *Les Caprices de Marianne*, *Fantasio*, *On ne badine pas avec l'amour* (Alfred de Musset); (29) *Horace* (P. Corneille); (32, 33, 34)

*Manon Lescaut* (L'Abbé Prévost); (35, 36) *Poésies Diverses* (Villon).—Of the second division—"Biblioteca Italiana": (5, 6) *Inferno* (Dante); (7) *Decameron, Prima Giornata* (Boccaccio); (12, 13, 14, 15) *Rerum Vulgarium Fragmenta* (Petrarca); (16, 17) *Purgatorio* (Dante); (21, 22) *Decameron, Seconda Giornata* (Boccaccio); (30, 31) *Paradiso* (Dante); (40) *La Vita Nuova* (Dante).—Of the third division—"Biblioteca Española": (8) *La Vida es Sueño* (Calderón); (37, 38, 39) *Les Mocedades del Cid, I, II* (Castro).—Of the fourth division—"Biblioteca Portuguesa": (10 and 25) *Os Lusindas I, II, and III, IV* (Camões). This very handy and clearly printed (in German) series, while very useful for school purposes, will also be welcomed by the general reader.

*The Oxford Book of French Verse*. Chosen by St. John Lucas, Coll. Univ. Oxon. (6s. net. Clarendon Press.)

Mr. Frowde has fitted out in charming style this comprehensive and representative selection of French verse from the twelfth century down to Paul Verlaine. Wherever one opens the volume the examples are typical and delightful; and the care and taste of the compiler, supported by the practical skill and generosity of the publisher, should do much to popularize the fine body of poetry here exemplified in specimens. The introduction reviews the whole subject on the main lines of development with insight and sympathy and in a style reflecting the polish of the examples. The compilation has evidently been a labour of love, growing out of intimate knowledge and discriminative appreciation.

*Oxford Higher French Series*. Edited by Leon Delbos, M.A. (Clarendon Press.)

Four new volumes have been added to this convenient and admirable series: (1) *Iambes et Poèmes*, by Auguste Barbier, edited by Ch.-M. Garnier, Professeur Agrégé au Lycée Henri IV. (2s. net); (2) *Contes et Nouvelles* ("Mateo Falcone," "Vision de Charles XI," "L'Enlèvement de la Redoute," "Tamango," "Carmen"), by Prosper Mérimée, edited by J. E. Michell, M.A., Ph.D., Assistant Master in Westminster School (2s. net); (3) *La Légende des Siècles*, by Victor Hugo, edited by G. F. Bridg, M.A. (3s. net); (4) *Eugénie Grandet* (Balzac), edited by H. E. Berthon, M.A., Taylorian Lecturer in French in the University of Oxford (2s. 6d. net). Each volume has a portrait of the author as frontispiece, and the last has also a portrait of Mlle. Nivellean, the model for Eugénie Grandet. The introductions and the notes are brief and instructive.

*Oxford Modern French Series*. Edited by Leon Delbos, M.A. (Clarendon Press.)

Five new volumes of excellent reading matter, with short introductions and sufficient notes: (1) *Le Roman d'un Jeune Homme Pauvre* (Octave Feuillet), edited by J. Laffitte, B. ès L., Principal French Master in the City of London School (2s.); (2) *Les Fiancés du Spitzberg* (Xavier Marmier), edited by A. A. Hentsch, Ph.D., Lecturer in Mediaeval and Modern Languages at Girton College, Cambridge (3s.); (3) *Journal d'un Voyage aux Mers Polaires* (Lieut. René Bellot), edited (with map) by H. J. Chaytor, Second Master at King Edward VII. School, Sheffield (2s. 6d.); (4) *Scrutium et Grandeur Militaires* (Alfred de Vigny), edited by C. L. Freeman, M.A., Modern Language Master in Magdalen College School, Oxford (2s. 6d.); (5) *La Jeunesse de Chateaubriand*, edited by Gerald Goodridge, B.A., Senior Master, United Services College, Windsor (3s.).

The second volume of *The Modern Language Quarterly* (Cambridge University Press) is a valuable repertory of current research and criticism in mediæval and modern literature and philology. The articles are mostly very substantial investigations or discussions; the minor criticisms are pointed and suggestive; and the lists of new publications are very convenient.

#### ENGLISH LITERATURE.

*The Complete Poetical Works of John Keats*. Edited, with an Introduction and Textual Notes, by H. Buxton Forman, C.B. (3s. 6d. Frowde. Oxford Edition.)

Mr. Forman is the most experienced of Keats's editors, and he has brought together in this volume the whole of the known works of the poet, including sixteen lines (of "The Eve of St. Mark") not printed in any other edition. "The edition," he says, "differs from those which I have prepared in past years in that it is neither an exhaustive *variorum* edition nor a mere unannotated text, but a text illustrated by readings and cancelled passages selected from the great mass of manuscript and printed material." The text, then, is authoritative and complete, and the illustrative readings, which are pretty numerous, but do not overburden the page, will indicate not only the results that Keats arrived at, but also the steps whereby he attained them, "so far as those steps may be said to have a true literary and psychological value." In a long introduction Mr. Forman essays "to record precisely how and in what forms the text has come through the nineteenth century and reached the poet's lovers and admirers in the twentieth." He adds also type facsimile titles of Keats's three books, a list of principal works consulted, and a careful chronology. This must be the standard popular edition.

*A Treasury of English Literature.* Arranged by Kate M. Warren. With an Introduction by Stopford A. Brooke. Parts I. and II. (1s. net each. Constable.)

This admirable work was originally issued in one volume in November, 1906, and now it is being reissued in six sections, two of which are before us. The first covers the "Old English" period, A.D. 700-1200: the selections are good, and the translations at the foot of the page will be very helpful. The second section runs from the twelfth century to the Age of Elizabeth: the selections are representative, and foot-notes (in several cases translations) are furnished where necessary. The type and get-up are liberal and attractive. The volumes should do a good deal to popularize the earlier English literature.

*The People's Library.* (8d. net each volume. Cassell.)

Here is a strong challenge to other series of reprints of good literature. The form is convenient, the type good, and the binding tasteful and substantial, while the price is astonishingly moderate. We have two more instalments of ten volumes each, with an additional volume (to each instalment) exemplifying the leather binding (1s. 6d. net each volume), which is very pleasantly flexible and strong.

First instalment: (1) *The Mill on the Floss* (George Eliot); (2) *Tom Brown's School-Days* (Thomas Hughes); (3) *Dickens's Christmas Books* (five stories); (4) *Kenilworth* (Scott); (5) *The Poems of Robert Browning, 1833-65*; (6) *The Autocrat of the Breakfast Table* (Holmes); (7) *Essays, Civil and Moral* (Bacon); (8) *John Halifax, Gentleman* (Mrs. Craik); (9) *The Cloister and the Hearth* (Reade); (10) *King Solomon's Mines* (Rider Haggard). The leather specimen is *Browning's Poems, 1833-65*, which runs to over six hundred pages, and is, we should imagine, the largest and most representative selection of Browning's work that is available in such get-up for eighteenpence.

Second instalment: (1) *The Bible in Spain* (Borrow); (2) *The Poems of Longfellow* (selected); (3) *The Opium Eater, &c.* (De Quincy); (4) *Henry Esmond* (Thackeray); (5) *The Last Days of Pompeii* (Lytton); (6) *The Last of the Mohicans* (Cooper); (7) *Silas Marner* (G. Eliot); (8) *The Tower of London* (Ainsworth); (9) *Pride and Prejudice* (Jane Austen); (10) *Cranford* (Mrs. Gaskell). The De Quincy volume also in leather.—The next instalment is promised on March 13.

*Nelson's Library.* (7d. net each volume.)

Seven new volumes of this convenient, well printed, and tastefully got-up series: (1) *The Bible in Spain* (Borrow); (2) *Sense and Sensibility*, (3) *Pride and Prejudice* (Jane Austen); (4) *Quentin Durward* (Scott); (5) *Gulliver's Travels* (Swift); (6) *A Child's History of England* (Dickens); (7) *Villette* (Charlotte Brontë). Each volume has a frontispiece.

Messrs. Macmillan have added to their delightful "Prize Library" (2s. 6d. each volume) (1) *Rosy*, (2) *The Rectory Children*, (3) *Two Little Waifs*—all charming stories by Mrs. Molesworth, charmingly illustrated by Walter Crane, and a new and revised edition of *The Kipling Reader* (selections from the books of Rudyard Kipling), illustrated effectively by J. Macfarlane.

#### ENGLISH READERS—LOCAL AND DESCRIPTIVE.

*Pitman's Local Readers* are similar in purpose, but they are more elementary in style, less full of matter, and much more abundantly illustrated. We have (1) *Esser*, (2) *Westward of the Wash* (counties of Lincoln, Northampton, Huntingdon, and Rutland), (3) *The Birmingham Midlands* (counties of Warwick, Stafford, and Worcester), (4) *Northumberland and Durham*, and (5) *Middlesex and London north of the Thames*. [(1)-(4), 3d. each; (5), 4d.] The matter is judiciously selected and simply presented; the maps are particularly good, and the illustrations are profuse and distinctive.

*London, Historical and Descriptive*, by Ben Jonson (1s. 6d. Blackie), offers a brief historical sketch of the City and of the part it has played in national affairs. The treatment is simple, and the selection of matter is appropriate, with a view to interest school readers. The illustrations are numerous and good.

#### SOCIAL AND POLITICAL QUESTIONS.

*Race Culture, or Race Suicide? A Plea for the Unborn.* By Robert Reid Rentoul, M.D., M.R.C.S., &c. (7s. 6d. net. Walter Scott Publishing Co.)

This is a second and enlarged edition of a work that attracted considerable attention some four or five years ago. As Dr. Rentoul says, it is "not a pleasant subject to write upon," but it is a subject of great importance and of increasing interest to students of sociological phenomena. The statistics here presented are, indeed, "appalling to the thinking man and woman"; and yet they "must not be taken as a complete statement of actual conditions" "I would point out," says Dr. Rentoul, "that mental and physical diseases are on the increase: the number of lunatics, idiots, imbeciles, feeble-minded, epileptic, and mentally backward children is increasing; the suicide and attempted suicide rates are increasing"; and so on for a long half-page. He inquires into the amount of physical and mental degeneracy, the cost of the upkeep of deteriorants and degenerates, and certain of the causes of national deterioration and

degeneracy, devoting much space to the more prominent of these causes. Finally, he explains proposals that have been made with the view of lessening the number of degenerates. From four of his tables of statistics it appears "that in one day alone [Census day, 1901] we had 65,700 married or widowed idiots, imbeciles, feeble-minded, and lunatics in the United Kingdom"; so that one can scarcely wonder at his concern that the species should not be perpetuated by such classes. The anthropologists are no less concerned than the doctors, and a warning note recently proceeded from the Eugenics School. Dr. Rentoul writes frankly and does not suffer fools gladly; but his argument, if sometimes pushed rather forcibly, is very striking, and the supporting statistics compel thoughtful and patient consideration.

*The Industrial Revolution.* By W. Cunningham, D.D., F.B.A., Fellow of Trinity College, Cambridge, and Archdeacon of Ely. (5s. net. Cambridge University Press.)

Dr. Cunningham's work is well known and highly appreciated. The present volume is a separate print of the portions of "The Growth of English Industry and Commerce in Modern Times" entitled "Parliamentary Colbertism" and "Laissez Faire"—that is to say, Part 3, and Postscript. The original work is now in a fourth edition, which has been assiduously brought abreast of the most recent investigations at home and abroad, and the separate Parts of course share the improvements of the whole. For many purposes, the more limited volume will be very convenient.

*The Need of the Nations: an International Parliament.*

(1s. net. Watts.)

"It is frankly admitted," says the author, "that war and militarism have none but detrimental effects on the internal progress of civilized nations," and "the hope of ultimate peace lies in the establishment of some International Authority which the various great nations will agree to respect." Indeed, "the time is ripe, or at least nearly ripe, for instituting some such Authority." Accordingly the author sketches in broad outlines a "Scheme of an International Parliament." The objects of the institution "would be primarily political, not economic"; "the effective control of armed forces by sea and land would be its first duty." The writer certainly takes time by the forelock, with some courage.

We are glad to see Mr. Frederick Peaker's interesting and useful little volume, *British Citizenship: its Rights and its Duties*, in a new and enlarged edition (2s., Ralph, Holland, & Co.). It contains much well selected information as to the machinery of government and administration, with new chapters on the relations of the colonies and dependencies to the mother country.

*The Licensed Trade*, "an independent study," by Edwin A. Pratt, which we noticed a few months ago, is now republished in strong limp cloth at 1s. net, by Mr. Murray. Without agreeing at all points with Mr. Pratt, we welcome this popular issue of his able book.

#### FIRST GLANCES.

##### CLASSICS.

*Aeneas Facta et Fata.* By E. Vernon Arnold, Litt.D., Professor of Latin at the University College of North Wales. 2s. Dent.

["A stepping-stone to Virgil, with notes and exercises on the text, for the use of beginners." Numerous illustrations, two in colour, specially designed by T. H. Robinson.]

*Cicero in Catilinam.* Edited by Ralph Harvey, M.A., Head Master of Cork Grammar School. 2 vols. 1s. 6d. each. Hachette.

[Introduction, notes, vocabulary, analysis, and index of proper names.]

*Decursus Primus: a First Latin Grammar, with Exercises.* By T. G. Tucker, Litt.D. Cantab., Professor of Classical Philology in the University of Melbourne. 2s. 6d. Macmillan.

*Elegia: Passages for Latin Elegiac Verse, with Hints and English-Latin Gradus.* By C. H. St. L. Russell, M.A., Assistant Master at Clifton College. 3s. 6d. Macmillan.

[Sequel to "Latin Elegiacs and Prosody Rhymes for Beginners." Hints full.]

*Ovid: Metamorphoson Liber XI.* Edited, with Introduction and Notes, by G. A. T. Davies, M.A., Assistant Lecturer in Latin, University College, Cardiff. 2s. Clarendon Press.

[Careful notes; summaries of paragraphs.]

*Virgil: Aeneid.* Book X. Edited by H. B. Widdows, M.A. Cantab., Assistant Master at the Collegiate School, Sunderland. 1s. 4d. Dent (Temple Series of Classical Texts).

[Introduction, biographical and literary; notes brief and pointed. Vocabulary. Attractive edition.]

##### MATHEMATICS.

*Algebra, Concrete, Elementary.* By Robert W. Holland, M.Sc., LL.B. 9d. net. Charles & Dible.

[Rules; brief explanations; numerous examples; miscellaneous tests from papers actually set. Goes up to problems resulting in fractional equations.]

Arithmetic, A Modern; with Graphic and Practical Exercises. By H. Sydney Jones, M.A. Cantab., Head Master of Cheltenham Grammar School. Part I. 3s. Macmillan.

[Numerous examples and exercises; revision and examination papers; answers. Very full and "modern."]

Arithmetic, Bell's New Practical, for Elementary Schools. By W. J. Stainer, B.A. Lond., Head Master, Municipal Secondary School, Brighton. Pupil's copy (containing the exercises of the First Year's Course of the "New Practical Arithmetic"), years first to sixth, 3d. each; year seventh, 4d. Teacher's copy (containing suggestions on methods of teaching and answers to the examples for calculation), years first to seventh, 8d. net each.

Arithmetic for Schools. By the Rev. J. B. Lock, M.A., Fellow and Bursar of Gonville and Caius College, Cambridge, formerly Master at Eton. New Edition, revised and enlarged with the assistance of V. M. Turnbull, M.A., Mathematical Master at the Perse School, Cambridge. 4s. 6d. Macmillan.

[Abundant examples; answers. Excellent.]

Arithmetic, Meiklejohn's Modern, arranged for Class use. Six Books. 2d., 2d., 3d., 3d., 4d., 4d. Answers, 3d. each book.

Arithmetic for Beginners. 1s. Parts I. and II. separate, 4d. and 6d. Heath.

[Section One of "The New Concrete Practical Arithmetics."]

Arithmetic, The Methodical. Edited by W. J. Greenstreet, M.A., F.R.A.S., Head Master of the Marling School, Stroud, Editor of the *Mathematical Gazette*. Parts I. and III. 1½. each.

[For First and Third Standard pupils in elementary schools, in accordance with the Code of Regulations issued by the Board of Education.]

Arithmetic, The School: being a School Course adapted from "The Tutorial Arithmetic." By W. P. Workman, M.A., B.Sc., Head Master of Kingswood School, Bath, late Scholar of Trinity College, Cambridge, and Smith's Prizeman.

[Third impression (second edition). Examples and exercises profuse; examination papers and miscellaneous problems; answers. Very comprehensive and able.]

Arithmetical Test Cards, Practical, McDougall's. Second Year. 1s. 3d. net. per packet. McDougall's Educational Company.

[180 sums for each of three terms; 180 revision tests; 180 mental sums. Very serviceable.]

Geometry and Physics, A First Year's Course in. By Ernest Young, B.Sc., Head Master, Lower School of John Lyon, Harrow, formerly of the Education Department, Siam. 2s. 6d. Also Part III. 1s. Bell.

[Abundant exercises; 110 figures. Answers separate, 6d. net.]

Geometry, Plane, Cartesian. Part I., Analytical Conics. By Charlotte Angus Scott, D.Sc., Girton College, Cambridge, Professor of Mathematics in Bryn Mawr College, Pennsylvania. 5s. Dent (Mathematical and Scientific Text-Books for Schools).

["The distinctive feature of the book is the systematic use of Cartesian line coordinates concurrently with point coordinates from the very first"; leaving, however, "the balance of power with point coordinates." Examples numerous; 100 figures.]

Geometry, Plane, for Secondary Schools. By Charles Davison, Sc.D., and C. H. Richards, M.A., Mathematical Masters at King Edward's High School, Birmingham. 4s. Cambridge University Press.

["On two important points we have ventured to differ from most writers of the present day." Plenty of exercises and problems.]

Metric System, Graduated Exercises on the. By A. W. Wise, A.C.P. Part I., Elementary, 2d. Part II., Advanced, 3d. Complete edition, with Answers, 6d. Ralph, Holland, & Co.

[Comprehensive, graduated, practical.]

EDUCATION.

Board of Agriculture and Fisheries. (1) Various useful Leaflets. (2) Report on Agricultural Education in the United States. 4d. post free (3d. to subscribers to the *Journal of the Board of Agriculture*).

Board of Education. (1) Special Reports on Educational Subjects: Vol. 18, The Education and Training of the French Primary School Teacher. Cd. 3777. 1s. [Exhaustive and instructive account of the movement.]

MUSIC.

Novello's Elementary Music Manuals (edited by W. G. McNaught). No. 3: An Elementary Sight-Singing Course. Staff Notation through Tonic Sol-fa, for Class use. By George Lane. Part I. 6d.

Novello's School Music. Humpty-Dumpty. A short Cantata for Children, consisting of a prelude, four short settings of the old nursery-rhyme, and part of the famous scene between Alice and Humpty-Dumpty (from "Alice through the Looking-Glass," by Lewis Carroll), adapted and set to Music by H. Walford Davies. 1s. 6d.; Tonic-Sol-fa, 9d.

Novello's School Songs. Book 145 (Grade II.): Six Two-Part Songs by various composers. 6d.; Tonic Sol-fa edition, 3d. Book 182: The Children's Summer Day. A Song-Cycle for Young Children, compiled and composed by Myles B. Foster (9 pieces). 9d.; Tonic Sol-fa edition, 4d. Book 184: Eight Kindergarten Game-Songs (reprinted from the *School Music Review*), by various composers. Voice parts in Staff and Tonic Sol-fa notations, with Pianoforte accompaniment, 6d. Book 185: Eight Unison Songs (Grade II., reprinted from the *School Music Review*), by various composers. Voice parts in Staff and Tonic Sol-fa notations, with Pianoforte accompaniment, 6d.; Tonic Sol-fa edition, 3d. Book 186: Thirteen Classical Songs (Grade III., reprinted from the *School Music Review*), by various composers. Voice parts in Staff and Tonic Sol-fa notations, with Pianoforte accompaniment, 9d.; Tonic Sol-fa edition, 4d. Book 187: Christmas Songs and Carols, by various composers. 6d.

No. 696: Winds Gently Whisper, by John Whittaker. Two-Part (Grade II., easy). 2d. No. 703: Comrades To-day (Gibney), by Myles B. Foster. Two-Part (Grade III., suitable for higher divisions). 3d. No. 754: Royalty (Elizabeth Forrester), by J. Cliffe Forrester. Unison (Grade II., easy). 1d. No. 783: Come away, Elves (Beatrice Abercrombie), by J. L. Hatton. Two-Part (Grade II., easy). 3d. No. 835: Springtime (Elmenhorst), by Ferdinand Hiller. Two-Part (Grade II., easy). 2d. No. 838: Infant Joy (Blake), by H. Walford Davies. Two-Part. 2d.; Tonic Sol-fa edition, 1d. No. 859: Mistress Mary, by C. A. Macirone. Three-part, accompanied. 2d.; Tonic Sol-fa edition, 1d. No. 860: Fair Summer Morning ("Placer d'Amore," transposed from the key of F and set to English words by M. E. Sidebotham), by F. Sor. Unison. (Grade II., easy). 2d. No. 862: God Bless the Prince of Wales (Linley), by Brinley Richards. Unison. 1d. No. 880: Sister Elves! It is the Hour, by Steven Glover. Unison (Grade II., easy). 3d.

[Varied, attractive, and excellent selection.]

Songster, British, McDougall's. By Edward Mason, Mus.Bac. 6d. net. ["Contains the greater part of the songs recommended by the Board of Education." The English Songster, Part I.: English songs (25), carols (3), rounds (12), general songs (2). Part II.: English songs (24), carols (3), rounds (12), general songs (2). The Scottish Songster (24). The Irish Songster (24). The Welsh Songster (20). "Auld Lang Syne" figures both in the English and in the Scottish section. Will the Scottish patriots regard this as a tribute or—otherwise? Surprisingly large and good collection at the price.]

The Scale-Staff System of Teaching Music. By A. J. Sleigh. First Book. 6d. net. Philip.  
[Simple and practical; progressive exercises.]

MISCELLANEOUS.

[Tract No. 7, issued for the National Union of Women Workers of Great Britain and Ireland. Second Edition. Very useful.]  
Ventilation: Report of Select Committee. Hickson, Ward, & Co.

MATHEMATICS.

Geometrical Note on a certain Circum-Conic.

By R. F. DAVIS, M.A.

Let S be any point on the circum-circle of a given triangle ABC; D, F the middle points of the arcs BC, AB opposite to A, C respectively. Let SD, SF intersect BC, AB in L, N respectively.

Applying Pascal's theorem to the hexagon BCFSDA, LN passes through the in-centre of ABC. But L, N are each points on the S-directrix of the hyperbola, having S as focus which circumscribes ABC in such a manner that A, C lie on the S-branch and B lies on the opposite branch. (For SL, SN bisect angles BSC, ASB.)

More generally:—Of the four circum-conics having S as focus, the S-directrices pass respectively through the in-centres and ex-centres of ABC.

Moreover, since  $DC^2 = DL \cdot DS = DI^2$ ; therefore  $SC : CI = SI : IL$ . That is  $SC$  : perpendicular from C on  $IL = SI$  : perpendicular from I on  $BC$ , or eccentricity =  $SI/r$ , a result remarkably similar to a well known theorem in reciprocation.

It would appear that the circum-conic is a parabola only when S is a point of intersection of the circum-circle with an ex-circle.

16358. (Professor R. W. GENESE, M.A.)—From a variable point P two fixed straight lines  $l_1, l_2$  are projected on to two fixed planes  $\alpha_1, \alpha_2$ . If the projections meet in a point, the locus of P is a hyperboloid of one sheet passing through  $l_1, l_2$  and the intersection of  $\alpha_1, \alpha_2$ .

Solution by S. T. SHOVELTON, M.A., and W. RIGBY, B.A.

Let Q be any point on the common section of  $\alpha_1, \alpha_2$ . Then the locus of P is obviously the locus of the intersection of the planes passing through Q and  $l_1$  and Q and  $l_2$ . But this intersection is a line meeting the three lines  $l_1, l_2$ , and the intersection of  $\alpha_1, \alpha_2$ ; therefore, &c.

The Problem of Three Images.

By C. E. McVICKER.

In what follows, I hope to show that (i.) the problem can be reduced to a much more tangible form, in which its irreducibility (in general) is placed beyond all doubt; (ii.) there are in general nine solutions, seven of which are real in the particular case where the given points are the vertices of an equilateral triangle.

1. Given A, B, C the images of X, Y, Z in YZ, ZX, XY respectively, it is required to find the points X, Y, Z.

Suppose a solution of this problem (call it I.) possible; then the following (II.) admits also of solution, and conversely.

A'B'C' is a given triangle whose sides B'C', C'A', A'B' are bisected at ABC; it is required to find a point O in its plane, such that

$$OA \cdot OA' = OB \cdot OB' = OC \cdot OC'.$$

Construction.—Find a triangle XYZ, such that the images of X in YZ, Y in ZX, and Z in XY coincide with ABC respectively; take O the circum-centre of XYZ, then shall  $OA \cdot OA' = OB \cdot OB' = OC \cdot OC'$ .

Proof.—Choose O as origin, and take an Argand Diagram on which the complex numbers at A, B, C, A', B', C', X, Y, Z are denoted by the corresponding small letters  $a, b, c, a', b', c', x, y, z$ .

Through X draw a parallel to YZ meeting the circum-circle of XYZ again at P. Then, since obviously PYAZ is a parallelogram, PZ is equal and parallel to YA, so that  $p-z = y-a$ . Also  $p/y = z/x$  (as the triangle POY is clearly similar to ZOY).

Therefore  $y+z-zx/x = a$ ;  
similarly  $z+x-zx/y = b$  and  $x+y-xy/z = c$ .

These equations give

$$x = bc'(b+c-a), \quad y = ca'(c+a-b), \quad z = ab'(a+b-c).$$

Now  $a'-b = c-a$ , for A'B is equal and parallel to CA.

Hence  $b+c-a = a', \quad c+a-b = b', \quad a+b-c = c$ ;

therefore  $x/b = c/a', \quad y/c = a/b', \quad z/a = b/c$ .

That is,  $\triangle XOB$  is similar to  $\triangle COA'$ ,  $\triangle YOC$  is similar to  $\triangle AOB'$ ,  $\triangle ZOA$  is similar to  $\triangle BOC'$ ; and therefore

$$OB \cdot OC = OX \cdot OA', \quad OC \cdot OA = OY \cdot OB', \quad OA \cdot OB = OZ \cdot OC'.$$

Hence (as  $OX = OY = OZ$ ),  $OA \cdot OA' = OB \cdot OB' = OC \cdot OC'$ . Q.E.D.

16255. (ALFRED A. ROBB.)—The solution of the differential equation  $d^2y/dx^2 = Ay^m x^n$  may be reduced to quadratures when either

$n = -(m + 3)$  or  $n = -\frac{1}{2}(m + 3).$

Show that the equation may also be solved when

$m = 2, n = -\frac{1}{2}^2; m = 2, n = -\frac{2}{7}^2 \dots (a, b).$

Solution by T. STUART, M.A., D.Sc.

In  $d^2y/dx^2 = Ay^2x^n \dots (1)$ , put  $x = \theta^{-a}$  and  $y = \lambda \cdot \theta^{-i(a+1)}$  in succession, and we have

$d^2\lambda/d\theta^2 = \frac{1}{2}(a^2 - 1)\lambda \cdot \theta^{-2a} + Aa^2 \cdot \lambda^2 \cdot \theta^{-2ai},$

where  $n_1 = na + \frac{1}{2}(a + 1) \dots (2)$ , and on putting  $y_1 = \lambda + (a^2 - 1)/8Aa^2 \cdot \theta^{n_1 - 2}$ , this becomes

$d^2y_1/d\theta^2 = Aa^2 \cdot y_1^2 \cdot \theta^{-2ai} \dots (3)$ , provided  $n_1$  is a root of  $8n_1^2 - 40n_1 + 49 = a^2 \dots (4)$ .

The equations (1) and (3) are thus either both soluble or both insoluble, and when a solution of one is known that of the other is at once deducible. Thus when  $n_1 = 0$ , we have  $a = \pm 7$  and  $n = -\frac{2}{7}^2$  or  $-\frac{1}{2}^2$ . Similarly, when  $n_1 = \frac{1}{2}^2$ , we get  $n = -5$  or 0; but if  $n = -5$ , (1) can be integrated otherwise. The integral in each of these cases is easily obtained.

Note.—In the *Nouvelles Annales de Mathématiques*, 2nd série, t. XVIII., 1879, M. Worms De Romilly has shown that the integration of

$d^2y/dx^2 = y^m(ax^2 + bx + c)^{-1(m+3)}$

can be reduced to quadratures and put in the form

$\int du \sqrt{\phi + Au^2 \cdot m^{-1}(m-1)} = \int F(x) dx,$

where A is an arbitrary constant, u a certain function of x, y, and  $\phi$  a function of u of the form  $a \cdot u^{2(m+1)(m-1)} + \beta \cdot u^2 + \gamma$ . The first two forms (mentioned by the Proposer) are obviously special cases of this, found by taking (i.)  $b = c = 0$ ; (ii.)  $a = c = 0$ .

16355. (R. F. WHITEHEAD, B.A.)—If a set of conics be taken passing through four points, then the quantity

$[e^4/(1 - e^2)] \sin^2 \frac{1}{2}(\alpha + \beta + \gamma + \delta)$

is invariant for the set, e being the eccentricity of, and  $\alpha, \beta, \gamma, \delta$  the eccentric angles of the four points for, any conic of the system. Find its value in terms of the elements of the quadrangle formed by the four points.

Solution by the PROPOSER.

Let the axes be the axes of any conic passing through the four points, so that  $x_1 = a \cos \alpha, y_1 = b \sin \alpha, \dots$

The determinant  $(1, -x_2, -y_3, x_4^2 + y_4^2)$   
 $= ab(1 - \cos \beta, -\sin \gamma, a^2 \cos^2 \delta + b^2 \sin^2 \delta)$   
 $= \frac{1}{2}[ab(a^2 - b^2)](1 - \cos \beta, -\sin \gamma, \cos 2\delta)$   
 $= 16ab(a^2 - b^2) \Pi \sin \frac{1}{2}(\alpha + \beta + \gamma + \delta),$

where

$\Pi = \sin \frac{1}{2}(\alpha - \beta) \sin \frac{1}{2}(\alpha - \gamma) \sin \frac{1}{2}(\alpha - \delta) \sin \frac{1}{2}(\beta - \gamma) \sin \frac{1}{2}(\beta - \delta) \sin \frac{1}{2}(\gamma - \delta).$

(Burnside & Panton, *Determinants*, p. 75.)

Again, the determinants  $\begin{vmatrix} x_2 & y_2 & 1 \\ x_3 & y_3 & 1 \\ x_4 & y_4 & 1 \end{vmatrix} \dots$

$= 4ab \sin \frac{1}{2}(\gamma - \delta) \sin \frac{1}{2}(\delta - \beta) \sin \frac{1}{2}(\beta - \gamma) \dots (l.c., p. 72).$

Hence  $(1, -x_2, -y_3, x_4^2 + y_4^2)^2 = \frac{(a^2 - b^2)^2 \sin^2 \alpha + \beta + \gamma + \delta}{a^2 b^2 \sin^2 \alpha + \beta + \gamma + \delta}$ ;

therefore  $\frac{e^4 \sin^2 \alpha + \beta + \gamma + \delta}{1 - e^2} = \frac{1}{2} \frac{\Sigma(\Sigma - pp')(\Sigma - qq')(\Sigma - rr')}{\Delta_1 \Delta_2 \Delta_3 \Delta_4}$ ,

where  $\Delta_1, \&c.,$  are the areas of the triangles formed by omitting each of the four points in turn, and  $pp', qq', rr'$  are the products of opposite pairs of lines joining the four points, and  $\Sigma$  their half sum (l.c., p. 77).

15978. (Communicated by C. M. ROSS.)—Explain how to express the co-ordinates of points on a uniscalar cubic as cubic polynomials of a parameter t. Taking the cubic

$x^3(a_1 b_1 c_1 d_1 \tilde{x} t, 1)^3 = y^3(a_2 b_2 c_2 d_2 \tilde{x} t, 1)^3 = z^3(a_3 b_3 c_3 d_3 \tilde{x} t, 1)^3,$

show that three points  $t_1, t_2, t_3$  are collinear provided that

$\begin{vmatrix} a_1 & a_2 & a_3 & 1 \\ b_1 & b_2 & b_3 & p \\ c_1 & c_2 & c_3 & q \\ d_1 & d_2 & d_3 & r \end{vmatrix} = 0,$

where  $p = -\frac{1}{2}(t_1 + t_2 + t_3)$ ,  $q = \frac{1}{2}(t_1 t_2 + t_2 t_3 + t_3 t_1)$ ,  $r = -t_1 t_2 t_3$ .

Deduce a quadratic for the parameters of the double point, and find the condition that it should be a cusp.

Note by  $\theta\theta$ .

The solution given in *Reprint*, Vol. XI. (New Series) does not seem quite correct in its determination of the double point.

If the determinant of the question is expanded in the form

$A + Bp + Cq + Dr = 0,$

and if  $t_1, t_2$  are parameters of the double point,  $t_3$  may be taken arbitrarily. Thus

$3A - B(t_1 + t_2) + Ct_1 t_2 + t_3[-B + C(t_1 + t_2) - 3Dt_1 t_2] = 0$

must be zero for all values of  $t_3$ . That is

$3A - B(t_1 + t_2) + Ct_1 t_2 = 0$

$B - C(t_1 + t_2) + 3Dt_1 t_2 = 0$

The quadratic with  $t_1, t_2$  as roots is thus

$t^2, t, 1 = 0,$

$3A, B, C$

$B, C, 3D$

and for a cusp the two parameters are equal, so that

$4(3BD - C^2)(3AC - B^2) = (9AD - BC)^2$

or  $B^2 C^2 - 4(AC^3 + B^3 D) + 18ABCD - 27A^2 D^2 = 0,$

which can of course be obtained at once, as the condition that  $A - Bt + Ct^2 - Dt^3 = 0$  has a squared factor. [See Salmon's *Higher Plane Curves*, Arts. 216, b, c; unfortunately, these Articles contain several misprints.]

16334. (Lt.-Col. ALLAN CUNNINGHAM, R.F.)—Factorize completely (into prime factors)  $N = (60601^6 + 60602^6)$ ;—has 29 figures.

Solution by the PROPOSER.

$N = (60601^6 + 60602^6) = x^6 + y^6$  (suppose).

Then  $N = N_2 \cdot N_6$ , where  $N_2 = x^2 + y^2$ , and  $N_6 = (x^6 + y^6)/(x^2 + y^2)$ .

(1)  $N_2 = \frac{1}{2}\{(x-y)^2 + (x+y)^2\} = \frac{1}{2}(1^2 + 121203^2) = 5.29.50655749.$

The author has compiled a large table of solutions of the congruence  $Y^2 + 1 \equiv 0 \pmod p$ , which is now continuous up to  $p \gg 50000$ . Taking  $Y = 121203$ , this table shows that  $N_2$  has no more divisors  $< 7121$ , so that the large factor in  $N_2$  is prime.

(2) As to  $N_6$ . Here  $y - x = 1$ ,

$y + x = 121203 = 3.201^2 = 3z^2$  (suppose),

whence  $y^2 - x^2 = 3z^2$ .

Hence  $N_6 = x^4 - x^2 y^2 + y^4 = y^4 - 3y^2 z^2 + 9z^4 = (y^2 + 3z^2)^2 / (y^2 + 3z^2)$ ,

a Trin-Aurifeuillian, whose factors (L, M) are known (algebraically) to be

$L = y^2 - 3yz + 3z^2 = 36361806601,$

$M = y^2 + 3yz + 3z^2 = 3709266613.$

The further factorization of L, M depends on showing how to utilize tables of solutions of  $(1 + y^6)/(1 + y^2) \equiv 0 \pmod p$  in this case.

This depends on a relation (the general proof of which will shortly be published) connecting three sextans  $N', N'',$  where

$N' = (1 + y'^6)/(1 + y'^2)$ , with  $y' = 6\eta'^2$ ,

$N = (x^6 + y^6)/(x^2 + y^2)$ , as in present case,

$N'' = (1 + y''^6)/(1 + y''^2)$ , with  $y'' = 6\eta''^2$ .

Then  $N', N''$  are Sext-Aurifeuillians and  $N' = L'M', N'' = L''M'$ , by known rules, and  $N = LM$  as above shown.

Now take  $y'' - y' = 1, z = 2y' + 1$ ; then the relation is that the numbers of the series  $N$  fall in between those of  $N', N''$ , in such a way that the L (of  $N$ ) = the  $M'$  (of  $N'$ ), the M (of  $N$ ) = the  $L''$  (of  $N''$ ).

Hence  $N = LM = M' \cdot L''$  and the tables suited to factorizing  $N' N''$  can be used for factorizing  $N$ . The Proposer has compiled a table of solutions of the congruence  $(y^6 + 1)/(y^2 + 1) \equiv 0 \pmod p$ , which is now complete up to  $p \gg 32000$ . This gives the divisors 13, 37, 9157 of  $N' N''$ ; and on actual trial in the L, M of  $N$  it is found that

$L = 9157.397073; M = 13.37.7711573.$

16352. (Professor NANSON.)—If

$a/(b-c) + b/(c-a) + c/(a-b) = 0,$

then

$a/(b-c)^2 + b/(c-a)^2 + c/(a-b)^2 = 0.$

Solutions (I.) by T. STUART, M.A., D.Sc.; (II.) by "SOLIDUS," and others.

(I.) Since  $\Sigma(a/b-c) = 0, \Sigma(b-c) = 0, \Sigma a(b-c) = 0$ ; therefore

$F(\theta) = \Sigma \frac{a}{\theta + (b-c)} \equiv \frac{(a+b+c)\theta^2}{(\theta + b-c)(\theta + c-a)(\theta + a-b)}$

Hence  $F(\theta) = 0$  has two zero roots; therefore  $F'(0) = 0$ , and this gives  $\Sigma[a/(b-c)^2] = 0$ .

Or as follows:—

Write  $(b-c, c-a, a-b) \equiv (\lambda, \mu, \nu)$ , and let  $\lambda, \mu, \nu$  be the roots of  $x^3 + qx - r = 0$ .

Then  $r [(a/\lambda^2) + (b/\mu^2) + (c/\nu^2)] \equiv \sum_1^3 a\lambda + q \sum_1^3 (a/\lambda)$ ;

and therefore if no two of the quantities  $a, b, c$  are equal  $\sum (a/\lambda^2)$ , i.e.  $[a/(b-c)^2] + [b/(c-a)^2] + [c/(a-b)^2] = 0$ .

(II.) We have

$$\left(\frac{a}{b-c} + \frac{b}{c-a} + \frac{c}{a-b}\right) \left(\frac{1}{b-c} + \frac{1}{c-a} + \frac{1}{a-b}\right) - \left(\frac{a}{(b-c)^2} + \frac{b}{(c-a)^2} + \frac{c}{(a-b)^2}\right) = \frac{a}{b-c} \left(\frac{1}{c-a} + \frac{1}{a-b}\right) + \dots = \frac{a(c-b) + b(a-c) + c(b-a)}{(b-c)(c-a)(a-b)} = 0.$$

Hence, if  $\sum a/(b-c) = 0$ , it follows that  $\sum a/(b-c)^2 = 0$ . But the converse does not hold good. If  $\sum a/(b-c)^2 = 0$ , we can deduce that either  $\sum a/(b-c) = 0$  or  $\sum 1/(b-c) = 0$ .

16312. (S. NARAYANA AIYAR.)—If  $f(x)$  represents the expression

$$a_0 + a_1x + a_2x^2 + a_3x^3 + \dots + a_nx^n,$$

how that the determinant

$$\begin{vmatrix} f(1), & f(2), & \dots, & f(r), & f(r+1) \\ f(2), & f(3), & \dots, & f(r+1), & f(r+2) \\ \dots & \dots & \dots & \dots & \dots \\ f(r), & f(r+1), & \dots, & f(2r-1), & f(2r) \\ f(r+1), & f(r+2), & \dots, & f(2r), & f(2r+1) \end{vmatrix}$$

is  $-(a_n \cdot n!)^{r+1}$  or 0, according as  $n$  is equal to or less than  $r$ .

Solution by Professor NANSON.

The determinant is orthosymmetric and is therefore not altered in value by replacing  $f(r+1)$  by its  $r$ -th difference. When this is done the elements below the secondary diagonal all vanish, and hence the determinant has the value  $(-1)^{r(r+1)/2} (a_n n!)^{r+1}$  or zero, according as  $r$  is equal to or greater than  $n$ .

16307. (D. BIDDLE.)—A circle of radius equal to unity is divided into  $n$  equal sectors and in each sector a circle is inscribed. Thus there are  $n$  small circles, each of which is in contact with the original circle and with the two adjacent circles of its own set. Within this circlet or set another set of  $n$  equal circles is described, each of which has external contact with two of the former set and also with two of its own, and so on, until the original circle can hold no more such circlets. Find their total area.

Solution by HENRY RIDDELL, M.E.

A and B are centres of a pair of circles in outer row; one circle of the second row is shown.

The points of contact of the alternate rows of circles must lie upon radii, since C is the centre of similitude of all circles whose centres lie on any one radius. By symmetry a line of contact points bisects the angle ACK.

Then  $CO/CP = CP/CQ = OP/PQ = r_2/r_1$ ,

where  $r_1$  = radius of one of the outer ring of circles, and  $r_2$  one of the second ring.

Then, if  $\alpha$  = area of one of the outer ring of circles we have the sum of all the areas

$$S = n\alpha [1 + CP^2/CQ^2 + (CP/CQ)^4 + (CP/CQ)^6 + \dots \text{to infinity}] = n\alpha [CQ^2/(CQ^2 - CP^2)] = \pi n r_1^2 [CQ^2/(CQ^2 - CP^2)].$$

If the radius of containing circle is unity,  $(1-r_1) \sin \pi/n = r_1$ ; therefore  $r_1 = \frac{\sin \pi/n}{1 + \sin \pi/n}$ ; therefore

$$S = \frac{\pi \sin^2 \pi/n}{(1 + \sin \pi/n)^2} \frac{CQ^2}{CQ^2 - CP^2}$$

From the equation of the circle we have

$$CQ + CP = \frac{2 \cos \pi/2n}{1 + \sin \pi/n},$$

$$CQ - CP = \frac{2(\sin^2 \pi/n - \sin^2 \pi/2n)}{1 + \sin \pi/n} = \frac{2 \sin \pi/2n (2 \cos \pi/n + 1)}{1 + \sin \pi/n},$$

$$CQ^2 - CP^2 = \frac{2 \sin \pi/n (2 \cos \pi/n + 1)}{(1 + \sin \pi/n)^2},$$

$$CQ = \frac{\cos \pi/2n + \sin \pi/2n (2 \cos \pi/n + 1)}{1 + \sin \pi/n},$$

$$\frac{CQ^2}{CQ^2 - CP^2} = \frac{[\cos \pi/2n + \sin \pi/2n (2 \cos \pi/n + 1)]^2}{2 \sin \pi/n (2 \cos \pi/n + 1)},$$

$$S = \frac{\pi \sin \pi/n [\cos \pi/2n + \sin \pi/2n (2 \cos \pi/n + 1)]^2}{2 (1 + \sin \pi/n)^2 (2 \cos \pi/n + 1)^2}$$

I leave the reduction to the reader.

QUESTIONS FOR SOLUTION.

16382. (M. T. NARANIENGAR, M.A.)—If forces proportional to the sides of a triangle act at any point of the N.P. circle towards the feet of the perpendiculars of the triangle, their resultant passes through the point of contact of the inscribed or escribed circle with the N.P. circle.

16383. (S. NARAYANA AIYAR.)— $\phi_1(x), \phi_2(x), \phi_3(x), \dots, \phi_n(x)$  are  $n$  functions which are expandible in powers of  $x$  with the respective absolute terms  $a_1, a_2, a_3, \dots, a_n$ .  $c_1, c_2, c_3, \dots, c_n$  and  $s_1, s_2, s_3, \dots, s_n$  are respectively the real and imaginary parts of the functions  $\phi_1(re^{i\theta}), \phi_2(re^{i\theta}), \phi_3(re^{i\theta}), \dots, \phi_n(re^{i\theta})$  [i.e.,  $\phi_1(re^{i\theta}) = c_1 + is_1 \dots$ ].  $S_p$  denotes the sum of the products of any  $p$  of the quantities  $s_1, s_2, s_3, \dots, s_n$  and the remaining  $n-p$  of the quantities with  $c$  written for  $s$ , the  $p$  quantities being chosen in every possible way, thus:

$$S_0 = c_1 c_2 c_3 \dots c_n, \\ S_1 = s_1 c_2 c_3 \dots c_n + c_1 s_2 c_3 \dots c_n + c_1 c_2 s_3 \dots c_n + \dots + c_1 c_2 c_3 \dots s_n.$$

Establish the following results:—

- (1)  $\int_0^\pi (S_0 - S_1 - S_2 + S_3 + S_4 - S_5 - S_6 + S_7 + S_8 - \dots) \tan \frac{1}{2} \theta \frac{d\theta}{\theta} = \frac{1}{2} \pi a_1 a_2 a_3 \dots a_n,$
- (2)  $\int_0^\pi (S_1 - S_2 + S_3 - S_4 + \dots) \frac{d\theta}{\theta} = \frac{1}{2} \pi [\phi_1(r) \phi_2(r) \phi_3(r) \dots \phi_n(r) - a_1 a_2 a_3 \dots a_n],$
- (3)  $\int_0^\pi (S_0 - S_2 + S_4 - S_6 + \dots) \frac{d\theta}{1 + \theta^2} = \frac{1}{2} \pi \phi_1\left(\frac{r}{e}\right) \phi_2\left(\frac{r}{e}\right) \phi_3\left(\frac{r}{e}\right) \dots \phi_n\left(\frac{r}{e}\right).$
- (4)  $\int_0^\pi (S_1 - S_3 + S_5 - S_7 + \dots) \frac{\theta}{1 + \theta^2} d\theta = \frac{1}{2} \pi [\phi_1\left(\frac{r}{e}\right) \phi_2\left(\frac{r}{e}\right) \phi_3\left(\frac{r}{e}\right) \dots \phi_n\left(\frac{r}{e}\right) - a_1 a_2 a_3 \dots a_n].$
- (5)  $\int_0^\pi (S_1 - S_3 + S_5 - S_7 + \dots) \frac{d\theta}{\theta(1 + \theta^2)} = \frac{1}{2} \pi [\phi_1(r) \phi_2(r) \phi_3(r) \dots \phi_n(r) - \phi_1\left(\frac{r}{e}\right) \phi_2\left(\frac{r}{e}\right) \phi_3\left(\frac{r}{e}\right) \dots \phi_n\left(\frac{r}{e}\right)].$

16384. (K. S. PATRACHARI.)—Solve the equation  $y(y + d^2y/dx^2) = a^2x^2$ .

16385. (Rev. F. H. JACKSON.)—If  $[a+1]_n$  denote the  $q$  factorial  $[a+1] [a+2] [a+3] \dots [a+n]$ ,

in which  $[a+r] = (q^a \cdot r - 1)/(q-1)$ , show that, on replacing  $q$  by  $1 + \epsilon$  ( $\epsilon$  a small quantity),

$$\frac{[a+1]_n [b+1]_n}{[c+1]_n [d+1]_n} = \frac{(a+1)_n (b+1)_n}{(c+1)_n (d+1)_n} \left\{ 1 + \frac{n(a+b-c-d)}{2} \epsilon + \frac{n^2 \{ 3(a+b-c-d)^2 + (a+b-c-d) \}}{24} \epsilon^2 + \dots \right\}.$$

The coefficients of  $\epsilon^3, \epsilon^4, \dots, \epsilon^n$  are required. The problem is of importance in discussing the limiting forms of  $q$ -functions.

16386. (A. M. NESBITT, M.A.)—If every element in the  $r$ -th row of a determinant of order  $n$  be  $1/r^2$ , except that in the principal diagonal which is  $1 + 1/r^2$ , then, if  $n$  be indefinitely increased, the limiting value of the determinant will be  $1 + \pi^2/6$ .

16387. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Show how to solve in (unequal) integers

$$N = x^4 + y^4 + z^4 = x'^4 + y'^4 + z'^4 = x''^4 + y''^4 + z''^4 = \dots$$

Give the lowest numbers so expressible in two ways and in four ways.

**11749.** (C. BICKERDIKE.)—A right cone is placed upon a revolving circular disc, when the disc is suddenly stopped and the cone tilts over. What amount of work is done by stopping the disc?

**11759.** (Professor RAMASWAMI AIYAR, M.A.)—Find loci in space for the movable points A, B, C, D, such that AB.CD = AC.BD.

**11784.** (Professor MALET, F.R.S.)—Using Legendre's notation for elliptic integrals, given the relations

$$F(c, \theta) + F(c, \phi) + F(c, \psi) - F(c, \alpha) - F(c, \beta) = 0,$$

$$\Pi(n, c, \theta) + \Pi(n, c, \phi) + \Pi(n, c, \psi) - \Pi(n, c, \alpha) - \Pi(n, c, \beta) = 0,$$

prove that

$$\begin{aligned} E(c, \theta) + E(c, \phi) + E(c, \psi) - E(c, \alpha) - E(c, \beta) \\ = -nc^2 \sin \theta \sin \phi \sin \psi \sin \alpha \sin \beta. \end{aligned}$$

**11898.** (Professor BHATTACHARYA.)—Observations give results 4.1, 4.23, 4.55, 4.56; find the probable error of the average.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor, Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, February 13th, 1908.—Prof. W. Burnside, President, in the Chair.

Mr. W. E. Dalby was admitted into the Society.

The following papers were communicated:—

"Proof that every Algebraic Equation has a Root," Dr. H. A. de S. Pittard.

"Note on  $q$ -Differences," Mr. F. H. Jackson.

"An Extension of Eisenstein's Law of Reciprocity" (Second Paper), Mr. A. E. Western.

"On the Uniform Approach of a Continuous Function to its Limit," Dr. W. H. Young.

"Conformal Representation and the Transformation of Laplace's Equation," Mr. E. Cunningham.

## SIR THOMAS MORE'S UTOPIA

(ROBYNSON'S TRANSLATION).

EDITED, WITH INTRODUCTION, NOTES, AND GLOSSARY, BY  
J. CHURTON COLLINS,

*Professor of English Literature in the University of Birmingham.*

This book is prescribed, for 1909, for the Matriculation Examination of the Universities of Manchester, Liverpool, Leeds, and Sheffield; for "Detailed Study" for the Teacher's Certificate Examination; and for "General Study" in Scheme I for the Examination of Students in Training Colleges.

*School World.*—"For educational purposes this edition promises to become authoritative."

*Athenaeum.*—"Suggestive in the best sense, and by no means overweighted with erudition."

### Select Plays of Shakespeare for Schools.

(Merchant of Venice, Tempest, As You Like It, Henry V., Julius Caesar, Hamlet, Macbeth, Midsummer Night's Dream.) Edited (slightly abridged), with Introduction and Notes, by G. S. GORDON.  
*[In the press.]*

### Selections from Dryden.

Chosen and edited by G. E. HADWY, Tutor in English Literature, Lady Margaret Hall, Oxford. Crown 8vo, pp. 192. 2s. 6d.

### The Writing of English.

By PHILIP J. HARTOG, Academic Registrar of the University of London; sometime Bishop Berkeley Fellow of the Owens College, and Lecturer in the Victoria University, Manchester. With the assistance of Mrs. AMY H. LANGDON. Crown 8vo, pp. xii+164. 2s. 6d.

*Athenaeum.*—"This handy and valuable little work."

### Sidney's Apologie for Poetrie.

Edited, with Introduction, Notes, and Index, by J. CHURTON COLLINS, Professor of English Literature in the University of Birmingham. Crown 8vo, pp. xxviii+112, with a facsimile title-page. 2s. 6d.

### The Works of Aristotle.

Translated into English under the Editorship of J. A. SMITH, M.A., Fellow of Balliol College, and W. D. ROSS, M.A., Fellow of Oriel College. PART I. **The Parva Naturalia.** By J. I. BEARE, M.A., Fellow of Trinity College, Dublin, and G. R. T. ROSS, M.A., D.Phil., Lecturer on Philosophy and Education in the Hartley University College, Southampton. 8vo, pp. ii+152. 3s. 6d. net.

#### OXFORD LIBRARY OF TRANSLATIONS.

Extra Fcap. 8vo. 3s. 6d. net per Volume.

NEW VOLUMES IN THE PRESS.

### Tacitus: Dialogus, Agricola, and Germania.

Translated, with Introduction and Notes, by W. HAMILTON FYFE. With Maps. *[Immediately.]*

### The Works of Hesiod.

Translated by A. W. MAIR.

### Virgil.

Translated by J. JACKSON.

SELECT LIST OF EDUCATIONAL WORKS PUBLISHED IN 1907 AND COMPLETE CATALOGUE (144 PAGES) POST FREE ON APPLICATION.

London: HENRY FROWDE, Oxford University Press, Amen Corner, E.C.

### The Sounds of English.

An Introduction to Phonetics. By HENRY SWEET, M.A., University Reader in Phonetics, Oxford. Crown 8vo, pp. 140. 2s. 6d.

### Phonetic Transcriptions of English Prose.

By DANIEL JONES, Lecturer on Phonetics at University College, London. Crown 8vo, pp. xiv+86. 2s.

### The Oxford Book of French Verse. Thirteenth Century to Nineteenth Century.

Chosen by ST. JOHN LUCAS, University College, Oxford. Second Impression. Extra fcap. 8vo. cloth, gilt edges, pp. xxxv+492. 6s. net, and on Oxford India paper 7s. 6d. net.

*Athenaeum.*—"The best selection that has been printed in England. The Introduction gives a rapid and brilliant survey of French poetry."  
*School World.*—"Would make a very good school prize."

### Trois Semaines en France.

A French Reader with questions for conversation and grammatical exercises. By D. L. SAVORY, Lecturer at Goldsmiths' College (late Assistant Master at Marlborough College) and L. CHOUVILLE. 2s.

### Marignan: Conquête et Perte du Milanais.

By J. C. L. SIMONDE DE SIMONDI. Edited by A. WILSON-GREEN, Senior French Master in Radley College. Crown 8vo, pp. xii+134. 2s. (*Oxford Modern French Series.*)

### Eugénie Grandet.

By HONORE DE BALZAC. Edited by H. E. BERTHON, Taylorian Lecturer in French in the University of Oxford. Extra Fcap. 8vo, pp. xxviii+206. 2s. 6d. net. (*Oxford Higher French Series.*)

### The Senior Geography.

**VOL. III.—THE OXFORD GEOGRAPHIES.** By A. J. HERBERTSON, Reader in Geography in the University of Oxford, and F. D. HERBERTSON. Second Edition. Crown 8vo, pp. viii+363, with 117 Maps and Diagrams. 2s. 6d.

*School World.*—"Is good everywhere. The text is written quite on the right lines; no pains are spared to bring out the cause and effect; broad statements are not isolated; examples by way of comparison and of reference are constantly cited. The sketch maps are most interesting and most instructive."

### The Rise of the Greek Epic.

Being a Course of Lectures delivered at Harvard University. By GILBERT MURRAY, formerly Professor of Greek in the University of Glasgow. 8vo, pp. xii+283. 6s. net.

*Nation* (Prof. BURY).—"This brilliant study recalls us to the true appreciation of values. The distinction of Mr. Murray's book is that it unites historical method with literary insight and imagination."

### The Attic Theatre.

A Description of the Stage and Theatre of the Athenians, and of the Dramatic Performances at Athens. By A. E. HAIGH, late Fellow of Corpus Christi College, Oxford. THIRD EDITION, Revised, and in part Rewritten, by A. W. PICKARD-CAMBRIDGE, Fellow of Balliol College, Oxford. 8vo, pp. xvi+396, with Illustrations. 10s. 6d. net.

### A History of Music in England.

By ERNEST WALKER, Balliol College, Oxford. 8vo, pp. viii+364. 7s. 6d. net.

*Times.*—"At last there is a book worthy of the subject."

*Standard.*—"Worthy in every way to rank as the standard work."

### The Art of Counterpoint

And its Application as a Decorative Principle. By C. H. KITSON, late Scholar of Selwyn College, Cambridge. Crown 8vo, pp. viii+352. 7s. 6d. net.

*Musical World.*—"At every step the student is assisted to a right appreciation of principles rather than a mere knowledge of rules. Whatever other books a student may take up, this is the one which he can least afford to neglect."

### COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

#### MEMBERS' MEETING.

The next Monthly Meeting of the Members will take place on Wednesday, the 1st of April, when Sir EDWARD BUSK will deliver an Address on "Moral Education," in connection with the approaching International Moral Education Congress.

The Chair will be taken by the Right Hon. Lord AVBURY, at 5.30 p.m.

Members have the privilege of introducing their friends.

#### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 31st of August, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in May.

**Certificate Examinations.**—The Midsummer Examination for Certificates will commence on the 30th of June, 1908.

**Lower Forms Examinations.**—The Midsummer Examination will commence on the 30th of June, 1908.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Autumn Examination in 1908 will commence on the 8th of September.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

#### LECTURES FOR TEACHERS.

A.—The First Course of Lectures (Thirty-sixth Annual Series) by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on "The Application of Psychology to the Work of the School," commenced on Thursday, February 13th, at 7 p.m.

The Course is meant to meet the needs of Teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the classroom. The Fee for the Course is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

For syllabus, see page 152.

C. R. HODGSON, B.A., Secretary.

Bloomsbury Square, W.C.

INCORPORATED ASSOCIATION OF HEAD MASTERS.

COLLEGE OF PRECEPTORS. TEACHERS' GUILD.

INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

ASSOCIATION OF TECHNICAL INSTITUTIONS.

ASSOCIATION OF PREPARATORY SCHOOLS.

WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments.

The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION.

Interviews (preferably by appointment) 12 p.m.—1.30 p.m., and 3 p.m.—5.30 p.m. Saturdays, 12 p.m.—1 p.m.

**Nervous Disorders**

The nerves need a constant supply of phosphates to keep them steady and strong. A deficiency of the phosphates causes a lowering of nervous tone, indicated by exhaustion, restlessness, headache or insomnia.

**Horsford's  
Acid Phosphate**

(Non-Alcoholic.)

furnishes the phosphates in a pure and abundant form. It repairs waste, restores strength and induces restful sleep without the use of dangerous drugs.

**An Ideal Tonic in Nervous Diseases.**

If your chemist does not have it in stock he can obtain it from Bovril, Ltd., 152 Old Street, London, E. C.

**University Tutorial College**  
(Affiliated to University Correspondence College).

Day and Evening Classes

FOR

**MATRICULATION**

AND OTHER

**LONDON UNIVERSITY EXAMINATIONS**

may be taken up at any time at proportionate fees.

The official Pass List of London University for the last Matriculation Examination credits University Tutorial College with nearly three times as many Successes as any other Institution.

**PRACTICAL SCIENCE CLASSES**  
are held during the  
**EASTER VACATION.**

Full particulars of Classes and Private Tuition for Matriculation, Inter. Science and Arts, B.Sc. and B.A., Prelim. Sci. (M.B.), College of Preceptors, and other Examinations may be had, post free, from

THE PRINCIPAL,  
University Tutorial College,  
Red Lion Square, Holborn, W.C.

**TRUMAN & KNIGHTLEY,**

Educational Agents,

6 HOLLES ST., CAVENDISH SQUARE,  
LONDON, W.

Telegrams—"TUTORESS, LONDON."  
Telephone—No. 1167 Mayfair.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

**A.—EMPLOYMENT DEPARTMENT.**

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER OF SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Prospectus, References, and full particulars will be forwarded on application.

COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)  
BLOOMSBURY SQUARE, W.C.

Lectures for Teachers  
ON THE  
SCIENCE, ART, AND HISTORY OF EDUCATION.

THE APPLICATION OF PSYCHOLOGY TO THE  
WORK OF THE SCHOOL.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The First Course of Lectures (Thirty-sixth Annual Series) commenced on Thursday, February 13th, at 7 p.m.

The Course is meant to meet the needs of teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connection with the examinations for the Associateship, the Licentiate, and the Fellowship. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the classroom.

SYLLABUS.

I. (Feb. 13.) *Nature and scope of Psychology*: border-land between physiology and psychology; characteristics of consciousness; the psychological attitude of mind; the teacher's use of psychology; Professor Münsterberg's view; the intermediary between psychology and education; genetic psychology; experimental methods: child study.

II. (Feb. 20.) *Consciousness*: its fundamental character; its polarity; its insulation: "the general consciousness": the ego or self; the subjective and objective; the unity of individual consciousness; meaning of the subconscious; advantageous position of educator as external influence.

III. (Feb. 27.) *Manipulation of Consciousness*: the various modes of being conscious; the so-called faculties; concentration and diffusion of consciousness; interest and attention; interaction between them; interest as means and as end; relation between the interesting and the easy; kinds of attention; physiological mechanism of attention.

IV. (March 5.) *Sense-perception*: nature of pure sensation; the senses, general and special; the essential mark of perception; the respective contributions of sensation and perception to knowledge; nature and scope of observation; its relation to inference; the gaping point; danger underlying the phrase "the training of the senses."

V. (March 12.) *Mental content*: the unit of mental content; the idea; laws of the interaction and combination of ideas; apperception; presented content and presentative activity; gradual modification of presentative activity; transitive and intransitive elements of thought; the static and dynamic view of the concept; the logical and psychological aspect of the concept.

VI. (March 19.) *Habit*: habit based on the laws of association; these laws not limited to ideas; association a general principle of organic development; place and value of habits in education; accommodation and co-ordination; the elimination of consciousness; convergent and divergent association; the continuum; reintegration.

VII. (March 26.) *Retention and recall*: physiological basis of memory; plasticity; memory not limited to intellectual process; personal identity; question of the possibility of improving the quality of memory; educational applications of mnemonics; learning by rote; obliviscence; element of purpose in memory.

VIII. (April 23.) *Imagination*: place of imagery in thinking; limitations imposed by images; importance of clearly imaged ends in ordinary life; practical applications in the schoolroom; the aesthetic imagination; cause of general suspicion of the "busy faculty"; scientific uses of the imagination; exact meaning of "picturing out"; relation of the imagination to the ideal.

IX. (April 30.) *Judgment and reasoning*: relation between logic and psychology; concept, judgment, reasoning correspond generally to term, proposition, syllogism; essential meaning of thinking is an adaptation of means to ends on the ideational plane; the purposive aspect of apperception; distinction between mere reintegration and thinking; the laws of thought as thought; the fundamental condition of all mental process; what underlies fallacies.

X. (May 7.) *Human nature*: general tendency to over-estimate the cognitive aspect; relation of knowledge to character; temperament the physical basis of character; classification of temperaments and of character types; advantages and dangers of such classifications; personality; permanency of temperaments and means by which they may be modified; types of troublesome pupils; treatment of the different temperaments in school.

XI. (May 14.) *The emotions*: value of the emotions in human life; like sensations they are subject to the law of relativity; emotions are to be utilized, not eliminated; cause of popular depreciation of the emotions; emotions are to be regulated by ideas; classification of the emotions; their expression; Lance-Jones theory of relation between emotion and its expression; element of truth in the theory and its great practical importance to teachers.

XII. (May 21.) *The will*: relation of will to feeling on the one hand and knowledge on the other; the appeal of the motive; fallacy of "the strongest motive"; resolution of the dualism implied in the process of making up one's mind; metaphysical exercises obscuring the problem of the freedom of the will; the evolution of the will in its relation to desire; the possibility of the training of the will; fundamental importance of the time element in this training.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* \* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

**Oxford and Cambridge Edition,**

*Post free.*

### THE NORMAL PREPARATION TEST MAPS.

1d. each net. (Copyright.)

By REGINALD GILL, F.R.G.S., London Chamber of Commerce.

This New Series of Test Maps has been produced in order to provide a ready means of discovering the Geographical Knowledge of the Pupil. The form in which the Maps are issued gives each Pupil, for the first time in Test Maps, an equal opportunity. In fact, the name list attached to each Map records the work attempted by the Pupil. *The Material upon which the Pupil is required to show his knowledge accompanies every Map in such a manner as to obtain the fullest results.*

**EUROPE:** British Isles and North Sea, England and Wales, Scotland, Ireland, France, German Empire, Italy, Balkan Peninsula, Russia.

**ASIA:** India. **AFRICA.** N. AMERICA. **UNITED STATES.** **AUSTRALIA.**

*Specimen Map free to Teachers.*

A Key to the whole of these Test Maps is issued, entitled **The Sphere Atlas**, 1s. 6d.

#### JUST PUBLISHED.

## HISTORICAL ATLAS,

*with CHRONOLOGICAL NOTES,*

by E. A. BENIANS, M.A., and T. H. KNIGHT, M.A. 96 pp. Crown 8vo, 8d.

Intended to provide suitable material for a general knowledge of British History and more especially for use as a supplementary work in Examination Preparation.

*Complete Catalogue post free.*

London: GEORGE GILL & SONS, Ltd., 13 Warwick Lane, E.C.

## MR. EDWARD ARNOLO'S LIST.

### THE LATEST FRENCH BOOKS.

**Arnold's Modern French Book. I.** Edited by H. L. HURTON, M.A., Chief Modern Languages Master at Merchant Taylors' School. viii + 198 pages. Crown 8vo, cloth, 1s. 6d.

**Arnold's Modern French Book. II.** Edited by H. L. HURTON, M.A. 1s. 6d.

These books are written on reformed methods, and contain a series of graduated Reading Lessons, followed by a carefully arranged *Questionnaire*, with Exercises for retranslation. At the end is an outline of French Grammar and a French-English Vocabulary.

*A Modern French Grammar in French for English Students.*

**Grammaire Française à l'Usage des Anglais.** Par E. RENAULT, Ancien Étudiant à la Sorbonne; Bachelier de l'Enseignement spécial; Officier d'Académie; Assistant Lecturer at the University of Liverpool. viii + 353 pages. Crown 8vo, 4s. 6d.

**Petite Grammaire Française à l'Usage des Anglais.** Par E. RENAULT. Crown 8vo, cloth, 1s. 6d. (For Junior Classes.)

**Elements of French Composition.** By J. HOME CAMERON, M.A., Lecturer in French in University College, Toronto, Canada. viii + 196 pages. Crown 8vo, cloth, 2s. 6d.

**Arnold's Lectures Françaises.** Four Volumes. Books I. and II. Edited and Arranged by JETTA S. WOLFF. Books III. and IV. Edited and Arranged by M. A. GEROTHWOHL, Litt.D. Illustrated with Reproductions of Paintings by French Artists. Book I., 1s. 3d.; Books II., III., IV., 1s. 6d. each.

The intention of this series is to supply choice extracts from French writers and poets either as a substitute for, or as a complement to, the reading of the prescribed texts. The variety of the sources whence the selections have been drawn should add both to their value as "unseens" and to their interest as representative specimens of French style from "le grand siècle" down to the present day.

#### ARNOLD'S ADVANCED FRENCH SERIES.

Introduction, Historical Notes, and a few Exercises in French Composition. Crown 8vo, cloth, 1s. 6d.

**De l'Angleterre.** Par Madame DE STAËL. Edited by W. G. HARTOG, B.A., Lecturer in French at University College, London. These chapters from "Considérations sur la Révolution Française" form a fascinating study of England as it appeared to this brilliant Frenchwoman in 1813.

**Causeries de Lundi.** Par SAINTE-BEUVE. Edited by A. W. TRESSLER, M.A., Assistant Master at Charterhouse. Selected essays from the great French critic, including *Qu'est-ce qu'un Classique*.

**Le Coup d'État.** Par VICTOR HUGO. Edited by J. W. LONGSDON, M.A. An abridgment of that magnificent piece of invective, *Napoléon le Petit*.

**Le Français Chez-lui.** A French Reader on Reform Lines, with Exercises on Grammar for Junior and Middle Forms. By W. H. HODGES, M.A., Senior Modern Language Master at St. Lawrence College, Ramsgate; and P. POWELL, B.A., Assistant Master at Wellington College. 1s. 3d.

**The Alphonse Daudet Reading Book.** Récit biographique et Extraits de ses Œuvres. Edited by JETTA S. WOLFF, Author of "Les Français en Ménage," &c. 1s. 6d. [Just out.]

#### ARNOLD'S FRENCH READING BOOKS.—REFORM SERIES.

The feature of these four volumes is that in addition to the notes and vocabulary there is a set of exercises, chiefly in the form of questions and answers in French, modelled upon the text of the narrative. This innovation promises to prove very popular.

**L'Apprenti.** By EMILE SOUVESTRE. Edited by C. F. HERDENER, Lecturer in Modern Languages, Durham University. Crown 8vo, 1s.

**Richard Whittington.** By Madame EUGENIE FOA. And **Un Conte de l'Abbé de Saint-Pierre.** By EMILE SOUVESTRE. Edited by C. F. HERDENER. Cloth. Crown 8vo, 1s.

**Mémoires d'un Âne.** By Madame DE SÉGUR. Edited by LUCY E. FARRER, B.A., formerly Assistant Lecturer at the Bedford College for Women, London. Cloth. Crown 8vo, 1s.

**Le Manuscrit de ma Mère.** By LAMARTINE. Abridged and edited by LUCY E. FARRER. Only authorized English Edition. Crown 8vo, 1s.

EDWARD ARNOLD,

London: 41 & 43 MADDOX STREET, BOND STREET, W.

## THE School World.

A MONTHLY MAGAZINE OF EDUCATIONAL  
WORK AND PROGRESS.

EACH NUMBER CONTAINS EIGHTY COLUMNS  
OF READING MATTER.

PRICE 6d. VOLUME IX., 1907, 7s. 6d. NET.

**Sir Thomas More's Utopia.** Translated by RAPHE ROBYNSON. Together with the Life of Sir THOMAS MORE, by his Son-in-Law, WILLIAM ROPER, reprinted from HEARNE'S Edition of 1716. Edited, with Introduction, Notes, Glossary, and Index of Names, by J. RAWSON LUMBY, D.D.

Fcap. 8vo,  
2s.

"Edited in a most complete and scholarly fashion, by Dr. J. R. Lumby, whose name alone is a sufficient warrant for its accuracy. It is a real addition to the modern stock of classical English literature."—*Guardian*.

**On Stimulus.** A Lecture by A. SIDGWICK, M.A.

This Lecture, which has been for some time out of print, has now been reprinted.

Fcap. 8vo,  
1s.

"An admirably vigorous paper. . . . Every teacher of the classics (the subject with which it deals) should read it."—*Spectator*.

"It is not every one who cares to know how to teach Latin verse-making, but every teacher ought to be desirous to make his lessons as stimulating as he can; and he can nowhere find more abundant help than in Mr. Sidgwick's forty pages, filled to overflowing with wit and wisdom, and enriched with the results of a wide and conspicuously successful experience."—*Manchester Guardian*.

**Colloquia Latina.** Adapted from Erasmus. With Notes and Vocabulary. By G. M. EDWARDS, M.A.

Fcap. 8vo,  
1s. 6d.

"This is an idea well conceived and executed, and we hope many schoolmasters may make the experiment of introducing their boys to Erasmus's living and humorous dialogues."—*Cambridge Review*.

**Altera Colloquia Latina.** Adapted from Erasmus. With Notes and Vocabulary. By G. M. EDWARDS, M.A.

Fcap. 8vo,  
1s. 6d.

"The favourable reception which has been accorded to 'Colloquia Latina' leads me to think that a second series of Dialogues may be found useful. I am more and more impressed with Erasmus's wonderful command of the best Latin idiom and vocabulary. He is equally admirable in sparkling dialogue, in graphic description, and in reflective passages often of great beauty. With him Latin is indeed a living language; and he seems to invest all his themes with the charm of a perennial youthfulness."—*Extract from Preface*.

**Inorganic Chemistry.** By E. I. LEWIS, B.A., B.Sc., Assistant Master at Oundle School.

Demy 8vo,  
5s.

"This book deserves the widest recommendation as a sound and interesting introduction to the subject. It consists of a series of chapters, or lessons, in which the systematic part of the subject is happily blended with a considerable amount of theory. The treatment is thorough and painstaking, without being dry. . . . It is a pleasure to notice a book of this description, for it indicates the serious and important place chemistry is taking in the school curriculum. It deserves a high place, not only in the school, but generally as an introductory first course, understanding by this term not a mere smattering of the kind deemed sufficient only a few years ago, but a course in keeping with the true position of the science as a serious and profitable part of a good modern education."—*Nature*.

**The Winchester Arithmetic.** By C. GODFREY, M.A., Head Master of the Royal Naval College, Osborne, and G. M. BELL, B.A., Senior Mathematical Master at Winchester College.

Crown 8vo,  
3s.

Teachers' Edition,  
6s. net.

"This admirable text-book will rank high amongst its fellows, and it would be difficult to find a school arithmetic more worthy of general use."—*Nature*.

"All the arithmetic that needs to be, or ought to be, undertaken in a secondary school, is here admirably presented in a slim volume of less than 200 pages. . . . It is one of the best and most workable of the recent arithmetics."—*Bookman*.

## THE CAMBRIDGE SCHOOL HISTORY OF ENGLAND.

**History of England for Use in Schools.**

By ARTHUR D. INNES, M.A. Complete in One Volume, or in Three Parts. Part I., To 1509 A.D. Part II., 1509-1714 A.D. Part III., 1689-1901 A.D. A separate Part is also issued containing the period "From the Wars of the Roses to the Death of Elizabeth."

Crown 8vo,  
with 13 Maps  
and 8 Plans,  
4s. 6d.  
Parts, 2s. each.

"Though written primarily as a school history this volume of some 600 pages may well be recommended to the average reader as a standard book of reference for facts and dates in English history. Proportion, thoroughness, and accuracy of detail are its outstanding features, while for the student the demands of the examiner have been kept steadily in view."—*Glasgow Herald*.

## Books suitable for the OXFORD LOCAL EXAMINATIONS, 1909.

### THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

With Introduction, Notes, Glossary, and Index by A. W. VERITY, M.A.

**The Tempest.** Sixth Edition. 1s. 6d.

"Mr. A. W. Verity possesses learning, literary insight, and a facile pen. He has a knowledge of boys and sympathy with their difficulties; moreover, when writing for them he seldom loses himself in the subject to the extent of forgetting his audience. Consequently, as has been shown in these columns on more than one occasion, he is an almost ideal editor of school texts."—*Guardian*.

**King Henry the Fifth.** Fifth Edition. 1s. 6d.

"The school edition of the play."—*Guardian*.

**Macbeth.** Fourth Edition. 1s. 6d.

"Seems to us to be an excellent text-book for the study of the play."—*Education*.

The Educational Times.

*A Poser for  
the Moral Congress.*

THE First International Moral Education Congress, to be held in London during the last week of September, promises to be the most important and influential of the various similar meetings which date back to the Health Exhibition of 1884. Preparations for it have been taken in good time. Herr Gustav Spiller, of Berlin, the energetic Organizer and General Secretary, has been engaged since the beginning of the year in visiting the chief capitals of Europe, and has secured the adhesion and support of every important foreign Government. Our own Board of Education, as might be expected, is the last to give its official sanction, but, as in the case of last year’s Colonial Conference, it will doubtless join at the eleventh hour.

The scope of the Congress, as stated in the prospectus, is to discuss Moral Education in its practical aspects. The following, for instance, are some of the subjects for which readers of papers have been already secured: “School and Home,” “Discipline,” “The Ethical Penetration of the whole Curriculum,” “The Relation of Aesthetic and Physical to Moral Education,” “The Education of the Morally Backward.” At the same time, it is expressly stated that reference to religious and philosophical points of view will not be excluded.

The list of supporters who have already given in their names is a sufficient guarantee of catholicity. Bishops and ministers of the Free Churches, the champions of denominationalism and of secularism, Mr. Edward Lyttelton and Mr. Allanson Picton, Prof. Findlay and Dr. Hayward, Mrs. Bryant and Lady Verney, will meet on neutral ground; and, starting from the opposite poles of theory, will, we have no doubt, be brought by the light of experience to very similar practical conclusions.

The fundamental question at issue, whether moral instruction should be given directly or indirectly, has lately occupied many columns of this journal, and both sides have been set before our readers by able exponents of the rival theories. We have no intention of reopening the controversy, nor at this stage will we embark on the equally fundamental question of the relation of moral to religious instruction.

We may, however, venture to offer one caution to the Executive Committee now engaged in drawing up the detailed programme. “Qui trop embrasse mal étreint” is an old saw, but modern instances of its truth are only too abundant. In a First Congress the temptation to cover the whole ground is almost irresistible, but, if it is not strenuously resisted, there will be dissipation of energy and every question raised will have to be adjourned to the next session. If it is wise, the Congress will concentrate its attention on one problem, or, rather, one group of problems, and postpone the rest of the programme to their next merry meeting. Thus, “The Interdependence of Religion and Morality” is, with all its ramifications and the practical applications of first principles to home and school life, a sufficiently wide and complex question to occupy all three days of the Congress. It has a direct bearing on English politics of the hour, but it would be removed from the dust and heat of the political arena and discussed by educationists indifferent to party or sectarian triumphs and concerned only with the moral and spiritual well-being of the child.

And there is one rider that we would propound to the Congress, not as a “riddle of death Thebes never knew,” but as a practical problem for the solution of which we have all the necessary data. How is it that, while our primary schools are torn and rent asunder by the religious difficulty, in our secondary schools it is virtually non-existent? Judging *a priori*, we should have expected that the reverse would have been the case. It is in boarding schools, not day schools, that the difficulty is likely to arise. In secondary day schools it is solved in various ways. In University College School no religious instruction of any kind is imparted. In the City of London School there is a conscience clause, but Dr. Abbott’s lessons in the Greek Testament were generally attended by the Jewish pupils. Merchant Taylors’ School is professedly a Church of England school, but the religious instruction is confined to a single lesson in the week, and it is, or was, attended by Nonconformist pupils. In none of these cases, which we have chosen at random, has any religious difficulty, so far as we are aware, arisen.

These are a few scattered facts bearing on our suggested problem, and it is to be hoped that the Report of Prof. Sadler’s Moral Inquiry League, with full tabulated information of the kind, will be available before the Congress meets.

Ignorance, insular ignorance, no less than conservative prejudice, is at the root of our present educational impasse, and an International Congress—rubbing shoulders with the highest authorities and the most active workers of foreign nations—will do more to remove it than a multitude of reports and Blue books and special inquiries. A late Minister of Education, on the eve of a Parliamentary debate, despatched a special messenger to Cannon Row to ascertain whether there were any denominational schools in Germany, and learnt, to his surprise, that in Germany there were none but denominational schools. No one would suspect our present Minister of Education of such gross ignorance; but even Mr. McKenna, if he survives the storm and stress of the present session, the apostolic knocks of the episcopal bench, and the shrewder thrusts from his friends in Russell Square, might learn something by attending the International Moral Congress.

### NOTES.

THE new Education Bill has taken the form that was naturally anticipated. The exhaustion consequent on excited debate appears to have reconciled most combatants to the main features of a national system involving public control and the absence of religious tests for teachers. The main struggle promises to rage about the "contracting-out" clause, on which the opinions of various important bodies are set forth in their own terms in our columns of Summary. However keen one may be for a purely national system, one must in reason acknowledge that such a settlement at the present moment could be accomplished only by force—the argument of big battalions—if accomplished at all; and here force is no permanent remedy. On the other hand, the exception meets the wishes of honest believers in denominational atmospheres, and the objection to forcible measures may be used to raise somewhat the proposed Government contribution to the finances of the "contracting-out" schools—the point of real pressure. It may be that most of these exceptions to a completely national system will by and by fall under the general rule, once the unnatural excitement leaves the situation in a calmer light. Extravagant utterances can only serve to play the game of the advocates of the secular solution, which the country certainly does not wish.

WHILE representatives of the Churches use drastic language in the supposed interests of religion and of religious equality, the National Union of Teachers is unusually vehement in the interests of education, and notably in opposition to "contracting-out." The N.U.T. resolution on this point goes so far as to say that the concession "would cause all prospect of the ultimate establishment of a national and homogeneous system of public elementary schools in England and Wales to vanish." This, we take it, is much too strong; and the absolute "nationality" of a system may be too dearly purchased. The weight of the N.U.T. criticism, however, is not to be denied: the insufficiency of income even to maintain the current standard, to say nothing of keeping pace with ever growing requirements, in point of

quality and number of teachers, and adequacy of buildings and other material equipment; the exclusion of teachers from the benefits of various funds on retirement; the exclusion of the children from the benefits of public centres of practical training, and public scholarships to higher schools. The price of denominationalism is a very heavy one; and the "intolerable strain" must soon make itself felt again, unless the denominational laity rise to the material support of their principles. The position is hard, but in the present temper of parties inevitable. "The Church," said Herbart, "may maintain relations with the school, but must not dominate it." The N.U.T. is emphatic against domination.

WE cannot think that the attitude of many Churchmen is truly represented by the Bishop of Manchester when he declares that "as a specimen of class legislation, of unscrupulous rapacity, and of religious intolerance in the twentieth century, the Bill will no doubt deserve a place in historical archives by the side of racks, thumbscrews, boots, and other engines of torture." The criticism, if just, need not be objected to on the score of violent expression; but it does not seem to be based on a calm historical retrospect. The Archbishop of Canterbury is more measured and businesslike. The Free Churches, while warmly supporting the Government policy in the main and accepting "contracting-out" with frank reluctance, show a hard front. They deprecate the least concession of larger financial aid, and insist on stringent requirement of the same standard of efficiency as in Council schools. The first point comes with bad grace in view of a conciliatory settlement. The second, however, is difficult to resist on the merits, however disastrous to the denominational schools in the absence of adequate maintenance. Meantime, the Secular Education League warns the wrangling churches by the issue of a manifesto in favour of the "secular solution," "signed by 557 clergy and ministers of all denominations." It is time to agree with the adversary quickly.

THE *Morning Post*, once more laying down the law on classical teaching, says "what we want is a classical revival"—presumably in the schools. This implies some change in the distribution of teaching force and teaching material. "The plain fact is that classical teachers have lost faith in the classics: they believe in scholarship successes, and in the means which are necessary for securing such successes, but the motive for their work lies outside the work itself, not in it." However this may be, the critic is right enough in demanding that they "make it their first duty to bring a boy into touch with the classical authors themselves," with a trenchant diminution of "grammatical elaborations, commentators' embroiderings, and parallel passages which, being produced ever so far in both directions, never meet." "There is no work in Latin literature suitable for normal boys of eight." Not even the Latin "Robinson Crusoe"? "Greek should have no place at all in the preparatory school." "Free composition in Latin and Greek must largely take the place of the stereotyped exercises." Hence will come a saving of time, a saving of error, a sense of freedom giving power and encouragement, a great increase

in the amount of reading, more attention to context and less to matters of form; and so, even if a boy never goes to the University, he will get some knowledge of classical literature. The substantial contentions of our contemporary are very well worth sober consideration.

GLASGOW seems to be at fever heat over the amazing question whether there should or should not be established in the University a Chair of Scottish History. The patriotic sentiment appears to have died away in some local minds, and the unabashed exhibition of the fact has stirred the blood of the faithful. Mr. Medley, the Professor of History in the University, finds that Scottish history (if any) extends but from about 1400 to the Union—say three centuries. Mr. Medley is, we believe, an Englishman, and such an expression of opinion is enough to recall to some of the more vivid spirits the ancient Act (of 1455) providing “that na Scottisman bring in the realme ony Englisman,” but fortunately (for the Professor) the statute is repealed. Apart from national rivalries, however, Prof. Medley’s view is not easily intelligible. Principal MacAlister understands the position better. “A whole province of historical study,” he recently said to the Franco-Scottish Society, “lies there [that is, in the Register House of Edinburgh], and lies altogether outside the border of English history in its narrower and more parochial sense. To explore that province, to show its bearing on the evolution of the Scottish nation and people, to explain what they were and had become, and were to be, by what they were and why, would be one function—and a most valuable function—of the Professor of Scottish History.” Even that is far from being the whole of the argument; but it amply suffices to cover with shame the opponents of the proposal for the new Chair.

In this age of new Universities, why should there not be a great Jewish University? And what more appropriate place for it—if the students could be attracted—than the Holy City of Jerusalem? Mr. Israel Abrahams makes a “strong, cogent, and exhaustive plea” for such a University, and the *Jewish Chronicle* says “it is a proposal which should not fail to thrill the fibre of every Jew—every Jew, that is, who cares anything for Jewish scholarship and Jewish learning.” Indeed, adds our contemporary,

It touches a chord in every heart that is Jewish which must respond to an idea which has in it the germ of illimitable possibilities for our people. If—nay, because—Israel is still destined to be the tribe of wandering foot, let us at least have a home for Jewish learning which, after all, is our sheet anchor in the turbulent waters that beat around us and has never failed us, however tempest-driven and storm-tossed we may have been. In a great Jewish University at the very centre of our people’s aspirations and hopes, it is quite possible there may be found the solvent of many problems, religious, social, political, and economic, which to-day confront us. A new era may begin for Jewry—a new era ushered in by the best tradition which Jewry ever has cherished.

There can be no question that there is plenty of Jewish intellect to make a Jewish University one of the very foremost seats of learning in the world. The first question, as usual, is the question of funds. But, though Jewry is not without its poor, it does not lack rich, enlightened, or generous sons and daughters; and there is the Jewish Colonial Trust, the Hirsch Trustees, and, no doubt, other wealthy bodies of similar character. The most serious difficulty,

probably, would be to get the students—at all events, in the first instance. Anyhow, the *Jewish Chronicle* regards the idea as “excellent, feasible, and fraught with potentiality of boundless good.” In which case, we wish it God-speed.

MESSRS. GINN announce the publication of a new volume of curious interest under the title of “*Rara Arithmetica*”—the most elaborate bibliography of arithmetic hitherto attempted. Prof. De Morgan was able to examine less than a hundred arithmetics written before 1601, including all editions. But Prof. David Eugene Smith, of Teachers’ College, Columbia University, who has edited the work, has had access to the library of the well known bibliophile, Mr. George A. Plimpton, of New York City, which contains early text-books and other works bearing upon arithmetic to the number of 374, besides some 68 manuscripts. He can thus furnish a description of most of the important arithmetics of the formative period in the modern history of the subject. More than 250 facsimile pages will not only reproduce title pages of rare first editions, but also illustrate the development of arithmetical processes and topics. We cannot all afford 20 dollars for the *édition de luxe*, even if there were copies enough to go round; but a student’s edition (without the two colour plates and seven heliotype plates of the special edition) will render the singular work accessible to mathematicians generally.

### SUMMARY OF THE MONTH.

In a circular letter issued to the clergy and managers of Church schools in his diocese, the Bishop of Manchester states, regarding the Elementary Education Bill:

As a specimen of class legislation, of unscrupulous rapacity, and of religious intolerance in the twentieth century, the Bill will, no doubt, deserve a place in historical archives by the side of racks, thumbscrews, boots, and other engines of torture. But that it can ever, in its present form, find a place in the Statute Book of England, I refuse to believe. Nevertheless, neither time nor trouble must be spared if it is to be defeated and relegated to its proper place in the limbo of legislative abortions. I ask you, gentlemen, to stand together as you did in 1906, and to let the whole country be aware of the indignation with which you regard this Bill of confiscation and of religious pains and penalties.

At the annual Congress of the National Union of Free Churches held at Southport (March 3), the following resolution was unanimously adopted:—

The Council, recalling the resolutions on national education passed at Newcastle, Manchester, Birmingham, and Leeds, approves the recent action of the Government in regard to denominational training colleges, and welcomes their new Education Bill introduced by Mr. McKenna.

I. The Council warmly supports the policy of the Government (1) in opening denominational training colleges to qualified applicants without regard to social status or religious belief; (2) in arranging that all future training colleges for teachers supported by public money shall be on a national and not on a denominational basis; (3) in proposing that in all public elementary schools “no teacher is required as a condition of his employment to subscribe to any religious creed or to belong to any specified religious denomination, or to attend or to abstain from attending any Sunday school or place of worship”; (4) in securing full and real public control of all “public elementary schools”; (5) in defining Cowper-Temple teaching by reference to the London County Council Syllabus; (6) in removing the cost of all denominational teaching from the rates; (7) in abolishing the sectarian monopoly in single-school areas and placing a public elementary school within reach of every child whose parents demand it.

II. The Council regrets to see the “contracting-out” clause of the new Education Bill, since it falls short of the ideal of a complete national system of education, inasmuch as it perpetuates ecclesiastical tests and fails to secure effective popular control over all the elementary schools. The Council recognizes, however, that the Bill properly limits “contracting-out” by excluding the single school areas from its operation and by requiring the same standard of efficiency in “contracted-out”

as in Council schools; and, therefore, while thanking the Government for the new Education Bill, and calling on the Local Councils to support it, the National Council urges on the Government: (a) that the conditions imposed by the Bill be most rigidly enforced; (b) that steadfast resistance be made to every appeal for further financial aid; and (c) that adequate safeguards be taken against lowering the standard of efficiency in schools, and also against the inadequate payment of teachers employed; and (d) its strong hope that the existing permission to charge fees may be withdrawn.

III. Further, the Council regards it as absolutely essential (1) that in order to avoid the subtle introduction of denominational tests in the appointment of teachers, it is of vital importance that the State teacher shall not be permitted to give denominational teaching in a public elementary school; (2) the denominational training colleges, being based on an entirely false principle, should be speedily replaced by training colleges of a thoroughly national type, free to all citizens of capacity and character, and worked without the need for any conscience clause.

THE Secular Education League has issued the following manifesto, signed by 557 clergy and ministers of all denominations. While not necessarily committed to every point of view expressed therein, the Secular Education League issues it as a contribution to the discussion now proceeding, and believes that it is likely to have an important bearing on the discussion of the religious problem in national education:—

We, the undersigned Christian clergy and ministers, desire to make clear the grounds upon which we support what is commonly known as the "secular solution" of the education question. By the "secular solution" we mean that religion should not be taught in the public elementary schools in school hours nor at the public expense. We have not arrived at this conclusion through under-rating the importance of religion in the education of our children. On the contrary, we consider it to be of paramount and vital importance, and we hold that education, in the truest sense, is impossible without it. But we hold equally strongly that it is not the function of the State to impart such teaching. We hold that it is contrary to the principles of justice and righteousness, either that Catholics should be forced to pay rates in support of Protestant teaching or that Protestants should be forced to pay rates in support of Catholic teaching; while it is equally unjust to force Freethinkers and Rationalists to pay rates in support of any religious teaching whatever. The only solution of this difficulty is that no religion at all should be taught at the public expense. But further, even were it possible, without injustice, for the State to teach religion, we believe that the attempt would be fatal to the best interests of religion itself. Religion can only be effectively taught by religious people, and the only bodies qualified to give such teaching are the various Christian denominations which exist for that very purpose. So far from the secular solution endangering or enfeebling religion, we believe that its direct effect would be to awaken the Churches to a sense of the duty and responsibility which are theirs and theirs alone. We are too deeply convinced of the vitality of the Churches of this country to deem it for one moment probable that they would not rise to what would in reality be their great opportunity.

THE following resolutions have been adopted by the Executive of the National Union of Teachers:—

I. Before expressing a favourable opinion on other features of the Education Bill, this Executive offers uncompromising opposition to the contracting-out clauses, condemns them as vitiating fatally those principles of local public control and religious freedom for teachers which other clauses in the Bill are intended to secure, and emphatically affirms that the existence of contracted-out schools would cause immense and irreparable damage to education, in the following ways, among others:— (a) Contracted-out schools would be removed from all local public control and supervision, and even from the present one-third proportion of local public management. (b) The transformation of existing schools into contracted-out schools, and especially the power to set up new schools of this type, would cause all prospect of the ultimate establishment of a national and homogeneous system of public elementary schools in England and Wales to vanish. (c) The income of the contracted-out schools would be wholly insufficient to maintain the present educational standard, and the children attending them would suffer deprivation of even the present degree of education; and, the income still less sufficing to enable contracted-out schools to keep pace with growing educational requirements, that disposition to keep Council schools marking time with the others which used to exist before 1902 would be revived. (d) Children in contracted-out schools would lose the benefit of the collective instruction at centres for manual training, cookery, laundry work, &c., provided by the Local Education Authority; and also of systems of scholarships confined to children from public elementary schools tenable at higher schools. (e) Because of the loss of rate-aid, the buildings of the contracted-out schools, the other material equipment, and the efficiency and sufficiency of the teaching staff, and therefore the care and education of the children, must necessarily deteriorate. (f) The management of contracted-out schools would become wholly private, locally irresponsible, largely clerical, and, as a rule, inefficient and loose.

(g) In contracted-out schools the "intolerable strain" in the way of inferior staffing, insufficient equipment, and less than reasonably suitable pay, which was mainly borne by the teachers prior to 1902, would be reimposed on them unjustly, and for no fault of their own. (h) Creed tests and the performance of services extraneous to day-school duty, such as training the choir, playing the organ, teaching in Sunday-school, and general parochial work, would be imposed on teachers in contracted-out schools as a condition of employment. (i) The terms of the Bill would forbid teachers in contracted-out schools to continue their contributions to the Teachers' Annuity Fund, or to make further recorded service for the purpose of the Teachers' Superannuation Act, and such teachers would thus be robbed, at the age of sixty-five, of the full effects of their thrift and past services to the State, while teachers newly entering such schools would not be permitted to make any such statutory provision for the future at all.

II. This Executive warmly welcomes the Bill so far as it affirms the principles of (1) full local public control and management of public elementary schools; (2) the abolition of powers to impose creed tests on teachers in such schools; and (3) the obligation on a Local Authority to provide a free place in a public elementary school for each child when the parents demand it.

III. This Executive also welcomes warmly the proposed consolidation and increase of Government grants, the proportioning of central aid to local expenditure on education, and the transference of special charges from particular parishes to the county as a whole.

IV. This Executive further approves the Bill in its application to single-school areas, and recommends the same application to all school districts, with the proviso that, instead of contracting out, the denominational difficulty may be relieved by permitting teachers now employed in denominational schools in other than single-school areas, so long as they hold their present posts and are therefore not subject to further creed tests, to volunteer to give special religious teaching out of school hours in schools which are at present denominational.

V. This Executive deprecates the proposed repeal of the free Education Act, and protests against the permission to charge fees for entrance to Council and contracted-out schools, and the creation of invidious social distinctions between those elementary-school children who bring fees and those who do not.

VI. This Executive claims, as a matter of mere justice, that the compensation clauses for teachers, which were added by the Government to the Bill of 1906, and unanimously approved by both Houses of Parliament, shall be inserted in the present Bill, so that teachers thrown out of employ by the operation of the Bill, if enacted, shall not be left without some solatium and provision for the immediate future.

THE Moral Instruction League proposes the following amendments to the Education Bill:—

(1) In every public elementary school systematic moral instruction shall be given on at least one day a week. (2) Instruction given under this section shall be given during the time ordinarily set apart for religious instruction (if any) given in the school subject to the provisions of Section 14 of the Elementary Act, 1870. (3) One of the conditions required to be fulfilled by every public elementary school in order to obtain a parliamentary grant shall be that efficient instruction of the kind prescribed by this section is given in the school. (4) Instruction given under this section shall be subject to inspection by the Local Education Authority and the Board of Education, and shall not be deemed to be instruction in religious subjects or in religious knowledge within the meaning of Section 7 of the Elementary Education Act, 1870.

THE Education Bill (says the *British Friend*) appears to us an honest attempt to find a settlement of this long-vexed question; and, whatever our Church and Catholic friends may say, it is a compromise and no mere "Nonconformist" measure. It comes as near as any measure could to achieving what is now declared to be the Churchman's policy—respect for the rights of parents. For, in the country districts, where, speaking broadly, for generations the rights of Nonconformist parents have not been recognized at all, and where the multiplication of little denominational schools is unthinkable, the only method is to exclude from State-supported schools denominational teaching in school hours. We believe the measure will succeed, in the country districts at least, in establishing a truly national system of public education; and though we do not like the "contracting out" provisions, there seems to be no other way to do justice to the claims of the Roman Catholics, Jews, and others in the towns.

In the House of Commons (February 21) on the supplementary vote of £6,000 for the Board of Education, including the Imperial College of Science and Technology,

Sir Philip Magnus said this sum of £6,000 was only part of a sum of £20,000 a year which was to be allocated towards the maintenance of the Imperial College of Science and Technology. He wished to know how the sum of £6,000 as an instalment was arrived at, and how much

of the total grant of £20,000 was in excess of the cost of maintenance of the Royal College of Science and the Royal School of Mines, which had been incorporated into the Imperial College. Unless this College was adequately endowed, it would fail to afford that aid to British industry that was expected of it. He wished to know whether the Government intended to appoint a Royal Commission in reference to the relation of the Imperial College to the London University.

Mr. Lough said that when the charter was granted to the College it was arranged that £20,000 a year was to be given to it practically out of the funds of the Board of Education. The bargain was made by the late Government, of which the hon. member was a supporter. There were other advantages which the Imperial College would obtain besides the grant of £20,000. It would receive the fees which were paid by students, which came to a considerable amount every year, and which had appeared in their estimates as an appropriation in aid. This would be a considerable advantage to the College. Then the Government had certain schemes of their own, which, according to the arrangement, would now become of advantage to the Imperial College, as the Board would have to pay the fees of those students. This would make a considerable difference in favour of the College. The Government were very glad to carry out the arrangement, all the more because it was the policy of their predecessors. He had every reason to believe that the main part of the funds would be forthcoming, but he could not say exactly. The governing body was going on steadily with its work, and there was not the slightest apprehension that it would be unable to fulfil its important duties.

In the House of Commons (February 28) Sir Philip Magnus asked the President of the Board of Education whether, having regard to Article 15, chap. 2, of the Regulations for Secondary Schools, 1907, he proposed, after July 31, 1908, to make evidence of training a condition for the appointment of any proportion of the teachers in secondary schools receiving Government grants; and whether the Board were prepared to make grants to private institutions for the training of secondary-school teachers, provided that the training is recognized by the Board as efficient. Mr. McKenna replied: "The Article referred to will stand in the next issue of the Regulations; and the Board hope to issue at an early date Regulations prescribing the conditions upon which grants may be made in aid of the training of teachers for secondary schools, but my right honourable friend is not in a position at present to indicate their scope."

Mr. McKenna, replying to a deputation from the Association of Municipal Corporations, said that, when his Education Bill passed, the Local Authorities would be far more than indemnified from the increased Exchequer grant for any extra burden thrown upon them by the new duty of the medical inspection of school children. Means would be devised to protect them from the loss of the attendance grant owing to necessary absence of inspected school children.

The Committee of the Council on Education in Scotland has passed a minute to amend the minute of April 27, 1899, whereby the limit of the grant for secondary and technical education shall be advanced from £2,000 to £10,000. This amendment is proposed with the object of making more money available for the promotion of agricultural education in rural districts, according to schemes framed in consultation with the several agricultural colleges in Scotland. It is proposed to add to the staff of the agricultural colleges under these schemes additional officers to give continuous instruction in various branches of agriculture at selected centres in each county, to provide additional instructors for dairying, poultry, and bee-keeping, and to facilitate the creation and suitable use of gardens and instruction plots in connexion with schools in rural districts.

The Board of Education has notified to the authorities of the University of Oxford that the Board will be prepared to recognize as qualified for admission to training colleges candidates that pass the senior examination of 1908 in certain specified subjects, with the further concession that they may be prepared for examinations forming recognized stages in the courses for University degrees. The Board should try to make it easy for the students in training to follow such courses as lead to a degree.

The main conclusions which were reached by the educational conferences during the Christmas holidays are briefly stated by Prof. Sadler in *Indian Education*, thus:

(1) In school curricula we need great varieties of type. The State

should not attempt to impose uniformity of courses of study in any one grade of school. The teacher is the soul of the school. The good teacher must be free in choice of methods and (not less important) in the amount of time which he may think well to give to each part or aspect of the subject in order to develop the intellectual powers of the pupils. Supervision and inspection are good and helpful, but their benefit lies in making the teacher feel that he is working in the public interest and in acquainting him with the experience and new ideas of other teachers. The wise inspector fertilizes the work in one school by bringing to it ideas from another.

(2) All education must begin with a careful and liberal training in the mother tongue. Premature Latin and Greek are the relics of a departed past. What we need in education is humanity. For that reason the classical languages and literature will always have an honoured place. But the classical studies of English boys must be preceded by a careful training in English.

(3) More should be done in the education of girls to give a scientific and practical training in housecraft. But the teaching of domestic subjects must not be allowed to injure the claims of a liberal education.

(4) One great danger of modern education is the overcrowding of curricula. Too many separate subjects are pressed at one and the same time upon the attention of the pupils. We have to move in the direction of simplicity. This means a reform in our methods of teaching English, and the quickening of a strong intellectual purpose in the school studies.

(5) The tenure and prospects of assistant teachers, in the great majority of English secondary schools, are deplorable. Reform in these matters is essential if the secondary schools are to accomplish their necessary work for English national life.

A COMMISSION authorized for the purpose in the Collège de France at Paris (says the *International*) has lately adopted Esperanto as an international language. The commission recognized that the artificial language devised some twenty years since by the Warsaw physician, Dr. Zamenhof, best fulfilled the aims of an auxiliary speech for the whole world. The members of the commission were distinguished scholars belonging to various countries, among them being Privy Councillor Prof. Ostwald, of Leipzig; M. Le Paige, Director of the Royal Academy at Brussels; Prof. Dr. Jespersen, of Copenhagen; and W. T. Stead, Editor of the *Review of Reviews*. They had received their mandates from the Delegation for the adoption of a universal auxiliary language, which has met at Paris since 1900, and is composed of 357 learned and other societies, and 1,011 men of science of all nations. This Delegation had approached the Association of Scientific Academies sitting in Vienna in May last, with the request that they would place a resolution *re* deciding upon an international auxiliary language on their agenda paper. The Academies, however, declared themselves incompetent to deal with the question, whereupon the Delegation took the settlement of the matter into its own hands.

At a recent meeting of the North Wales branch of the Mathematical Association, held at the Friars' School, Bangor, it was urged that children of seven or eight should begin experimental work in measuring and the practical use of weights and measures instead of the usual abstract rules and methods. The use of slide rules at an early stage was also advocated, and the working of decimals beyond one or two places deprecated. Prof. Bryan spoke strongly in favour of the disappearance of algebra as a separate examination subject in all schools. Just as Euclid had been largely replaced by examples to be worked by ruler and compasses, so practical work and graphical methods were wanted in algebra, joined with arithmetic; and the solution of equations ought to be reached much earlier by omitting long division, complex fractions, &c.

The first volume of the Report of the U.S. Commissioner of Education for the year ending June 30, 1906, in addition to chapters summarizing the progress made in the various departments, contains a series of excellent articles on educational administration in various European and other countries. From the summary provided in the Commissioner's introduction it appears that there were, during 1905-6, 622 institutions of higher education reporting to the Washington Bureau of Education. The total number of professors and instructors reached 23,950, and the number of students 258,603—an increase of 9,430 on the preceding year. The value of the property possessed by the 622 institutions amounted to £110,815,400, of which £49,686,100 was the amount of productive funds. The aggregate income of these institutions for the year was £3,956,709. The total value of all

gifts reported amounted to £3,543,300: Harvard University received £443,600; Yale University, £229,100; Columbia University, New York, £210,000; the University of Pennsylvania, £109,000; and the North-Western University, Illinois, and Princetown University, New Jersey, each received about £105,000. In this report, for the first time, the number of students in schools of technology is not given separately, because, as the commissioner points out, there has been an erroneous opinion in Europe and elsewhere that there is no higher technical training in America outside the schools of technology, whereas the ordinary Universities grant nearly twice as many degrees in science as the technical colleges, and are doing excellent work in pure and applied science generally.

ABOUT three years ago a new syllabus of instruction was introduced into the State primary schools of Queensland. The new syllabus was designed to make the self-activity of the pupils the basis of school instruction, to bring the work of the pupil into closer touch with his home and social surroundings, and to increase the influence of the school as an agent in the intellectual, moral, and social development of the child. A three years' experience of the new syllabus has proved that it has fully realized expectations, and that the primary system of education has now a more practical bearing upon the requirements of the State and the future vocations of the children. The pupils are made to do things for themselves, instead of merely seeing them done by the teachers. In keeping with the spirit of the new schedule, the Department has encouraged the teaching of elementary agriculture in schools in farming localities and of elementary mineralogy in mining communities. Regular courses of instruction for teachers are held at the Gatton College; prizes are awarded for the best school gardens or elementary agricultural work; simple tools and garden implements and seeds and plants are supplied free to the schools; cabinets for mineral collections and bookcases for school libraries are also provided free; and, as many teachers have now qualified as milk and cream testers, the Department pays half the cost of simple testing apparatus for use in schools if the parents will find the other half. This offer has already been accepted by several schools in dairying centres.

WE piece together the following items from a recent number of the *School Journal* :—

Some of Philadelphia's people are much wrought up over the wretched state of affairs in the schools of their city, and drastic measures are suggested as a remedy. Overcrowding, poor ventilation, antiquated and unsafe buildings are some of the things charged. . . . At the recent St. Joseph County (Indiana) Teachers' Institute, Dr. George W. Neeb declared that teachers everywhere are notoriously neglectful of their own health and the health of the children they teach. . . . Recent investigations by a Special Committee show that, out of 600,000 school children in New York City, 465,800 are physically defective. When these statistics, which include in their number all classes of children, had been definitely determined, they were turned over to another Committee composed of four physicians, two men and two women, who were instructed to visit the children at their homes and make personal inspection. Hundreds of homes were visited and some alarming facts discovered concerning the physical and social condition of those homes, the quantity and quality of the food the children had, their sleeping accommodation, the income of the wage-earners, the amount paid for rent, and the practices of hygiene indulged in by the housewife. Out of 168 cases of malnutrition in a given district, 51 cases were in families having an income of more than 20 dollars per week, and but 20 cases were in families having less than 10 dollars per week. A total of 1,441 families paid 70.3 per cent. of their income for rent, and yet from these families fewer children came to school suffering from malnutrition than from the same number of families of comparative wealth. Of public-school children 72.4 per cent. have defective teeth; and further digging into the causes for this condition of affairs resulted in the information that the dentist is seldom consulted in the cases of children of school age, and that a large number of the children investigated do not know the mysteries of the tooth brush. It was also found that in a very large number of instances soap was an absolute stranger to the children! The National Association for the Improvement of the Condition of the Poor, which conducted this investigation, has appealed to President Roosevelt for aid, for it believes that similar conditions exist among school children in other parts of the country.

MR. J. R. M. BUTLER, who has won the Porson Scholarship at

Cambridge, is (says *Free Lance*) the son of the Master of Trinity, and both his parents were Senior Classics. Dr. and Mrs. Butler were married by a Senior Classic, Dr. Vaughan; the best man at the wedding was a Senior Classic; Dr. Butler's father was a Senior Wrangler; and Sir James Ramsay, Mrs. Butler's father, got a first in Greats. To complete the tale of scholarship, young Mr. Butler's brother is at present the best scholar at Harrow.

CANON CROMWELL, formerly Vice-President of Durham Diocesan Training College, and for twenty-two years the well known Principal of St. Mark's College, Chelsea, died at Slough, in his eighty-eighth year.

## UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

THEY are talking of establishing a professorship to deal with the theory of heredity and racial development. If the work of the professor is to be on modern and practical lines, he can provide himself with two very "shocking examples" in the persons of Mr. Andrew S. F. Gow and Mr. James R. M. Butler. The former has won the Browne Medals for Greek Ode and Greek Epigram, while Mr. Butler takes his accustomed monthly distinction in the form of the Latin Ode.

The Goldsmiths' Company have shown their generosity in a practical and workmanlike way by endowing a Readership in Metallurgy and Assaying. It cannot be too often pressed upon the generous benefactor that the University has the best material for developing the scientific knowledge on which the arts and crafts are founded: the Germans have taught us a lesson, and now ordinary manufacturing firms find it to their advantage to retain the services of really well trained scientific men. In Pathology, Bacteriology, and kindred topics, the patient work of the research enthusiast leads to more valuable results when carried on away from the hurry and bustle of actual practice. Even our Law School might lay the basis of a scientific study of the subject if only it was not so deplorably weak and so hampered by the ridiculous and vicious regulations which control the work of students for the Bar in London.

The chair of Agricultural Botany has been filled by the appointment of Mr. Rowland Biffen. The department is now well staffed, and is doing really good work. The Agricultural Special is to undergo reconstruction. Agriculture is to be introduced as a subject in the examination.

Some little discussion has taken place lately on the subject of the Whewell Professorship now held by that eminent international lawyer Dr. Westlake. It is doubtful whether the professor can be legally compelled to reside, and there is a somewhat strong feeling that non-resident professors are out of date. Of course there are exceptional cases, and these must be dealt with specially. One thing is perfectly certain—the statutory requirements of delivering twelve or possibly twenty-four lectures a year do not entail a very onerous burden on any professor who enjoys a stipend of anything from £500 to £800 a year. The writer of these notes is in favour of annual or biennial appointments, an opinion which is based upon a conviction that many professors could exhaust all the results of their special research if they were to lecture three times a week for three or six terms.

We are making a move in the right direction by taking steps to confer the title of Emeritus Professor on those who have done good work and have retired to make room for younger men.

The report of the Botanic Garden Syndicate shows that, in spite of the rise in prices of coal and labour, the Gardens are doing remarkably well. It is not, perhaps, generally known that quite half the ground held by the University is let out to private tenants in small allotments, and the rent received (£304) might be quadrupled at any time by substituting building for agricultural tenancies. It is satisfactory, however, to note that Mr. Lynch's services as Curator are at length recognized by the addition of £50 to his present inadequate stipend. Mr. Blackman, of St. John's, is still carrying on his researches into the breathing of plants, and perhaps some day the result of his labours may rejoice the heart of the practical flower-grower.

Canon Parry is resigning his Tutorship at Trinity, after serving an extra term at the special request of the Council. He will, however, not give up college work, but will take over the office of Dean, for which he possesses the most obvious qualifications—absolute sincerity and complete devotion to the interests of his college. As tutor Mr. Parry is succeeded by Mr. Barnes, of whom the voice of good report is heard in the land.

To conclude with prophecy. The Professorship in Biology, to which allusion was made above, will probably fall to Mr. Bateson; and, if the Whewell Professorship should fall vacant, Dr. Laurence, of Downing, would fill the chair with dignity and distinction.

In matters of sport our prospects look fairly rosy. The sports should be a very open affair, but the Boat Race should be a certainty if Stuart can only keep fit and well. In golf we do not appear to have the strongest of chances, but before these notes see the light the results will be public property.

The Lent term has been the longest on record (by one day) and the dreariest by many lengths. The May term promises to be specially short, bright, and eventful. A week in April and a week in June, on either side of the merry month, is all that we have for academic labours; a fortnight in June devoted to irresponsible frivolity, and then another year is over.

THE Earl of Rosebery, as Chancellor of the University of London, visited University College (March 26) and formally opened the new libraries and the new south wing, which includes lecture-rooms for the faculty of arts, the departments of geology, hygiene, and experimental psychology, also large extensions of the departments of applied mathematics, of mechanical, electrical, and municipal engineering, and accommodation for the new hydraulic laboratory.

At the meeting of the Council of the University of Paris (February 24) the Vice-Rector presented to that body a loving cup, a gift made by the University of London to the University of Paris, as a souvenir of the hospitality it received last summer. The cup is silver-gilt, repoussé and chiselled, and is nearly 3 ft. high. The lid is surmounted by an allegorical figure, while the body of the cup bears on its outside the arms of the Universities of Paris and London, two escutcheons emblematic of the French Republic and Great Britain, and three figures symbolic of Science, Letters, and Art. The cup was designed and executed by Messrs. Ramsden & Carr.

McGill. THE annual report of McGill University, Montreal, for 1906-7, which has just been issued, is of interest as showing not only the generosity of its benefactors, but the scale on which it is inviting fresh benefactions. The principal gift received during the year was 2,002,333.33 dols. from Sir William C. Macdonald for the endowment of the agricultural and training college which bears his name, an institution which, it will be remembered, was itself a gift from him to the University. The smaller sums include 11,000 dols. from the same donor for other purposes, 5,250 dols. from Lord Strathcona, and 14,000 dols. from graduates for the endowment of the McGill Union. The net result of the year's operations is that revenue falls short of expenditure by 33,103 dols. A year ago the University appealed for 1,000,000 dols. to meet its growing needs, largely to improve internal conditions at the University, to increase professional salaries, and so forth. Soon after that, however, the double disaster occurred by which both the new engineering building and the medical building were burnt down, and the original appeal was almost lost sight of. It is now pointed out that 1,000,000 dols. would only make good the loss occasioned by the fires, and that another 1,000,000 dols. is wanted to provide enough revenue for current needs. The amount received from insurances on the burned buildings was 636,000 dols.; but the cost of the new engineering building, with additions to a kindred structure, was 512,000 dols. without equipment, and the expenditure consequent upon the fires, such as demolition of the ruins, installation of electric wires, and fire protection, already amounts to 85,000 dols. The new medical building is expected to cost from 500,000 dols. to 600,000 dols., and it is hoped that the University will be able to begin the work this spring.

Parliamentary Grant. THE Board of Education has published the reports from those Universities and University Colleges in Great Britain which participated during the year ended March 31, 1907, in the annual Parliamentary grant, now amounting to £100,000. The reports deal with the work of the colleges during the year 1905-6, and appear to be reprinted just as they were received by the Board of Education. The information is arranged, it is true, under headings prescribed by the Board, such as land and buildings, staff and educational work, students, fees, finance, and so on, and it is possible with much labour to institute comparisons between the various institutions. The usefulness of the Blue-book would be increased greatly (says *Nature*, and we entirely agree) if, following the practice adopted in many other of the Board's publications and the custom which is fairly general in American volumes of a similar kind, the statistics relating to the various colleges were summarized and the totals obtained for the different institutions classified and compared. It would then be possible to co-ordinate the facts and to say, for instance, how the interest in higher education in the north of England compares with that in the Midlands or in Wales. If some such plan were adopted much greater use would be made of what would then be an interesting and serviceable volume.

Carnegie Trust. THE second annual report (for 1907) of the Carnegie Foundation for the Advancement of Teaching is a very interesting document. Mr. Carnegie's gift of two million pounds sterling was intended to serve primarily for the establishing of retiring allowances for teachers in the institutions of higher learning in the United States, Canada, and Newfoundland, and was to be administered in such manner as the trustees might decide. The fears expressed in some quarters that such a gift in the hands of a limited number of men might prove a centralized power which would hinder rather than aid the progress of education do not seem to have been well founded. Since the inauguration of the foundation down to September 30 last, grants have been made to 166 persons (18 of whom died during the period), involving an annual budget of £16,932. Of this amount, £29,230 was devoted to retiring allowances in accepted institutions and £17,702 to retiring allowances made to individuals. In the group of retirements on the basis of age an interesting comparison is made; the number of allowances granted on this basis to professors not in accepted institutions before October, 1906, was eighteen; since then only eight similar allowances have been made. This indicates that the number of aged professors whom on account of their distinguished merit alone the trustees would be likely to add to the holders of allowances is rapidly diminishing. It is also interesting to note that retiring allowances to professors in State Universities are made only when the services rendered to learning by the applicant have been of great distinction. As indicative of the number of applications made to the trustees, it may be stated that the files of the foundation show that 500 applications have been refused. It is satisfactory to learn that when once the principles of award have been decided upon finally, the trustees will see that the retiring allowance comes to the recipient "as a right, not as a charity; as a thing earned in the regular course of service, not a courtesy."

### THE EDUCATIONAL LADDER.

CAMBRIDGE UNIVERSITY.—Chancellor's Medal for English Verse: George G. G. Butler, Trinity.—Porson Prize (Greek Iambic Verse): C. A. Storey, Minor Scholar of Trinity: honourable mention, A. S. Farrar Gow, Scholar of Trinity.—Brown Medals: Greek Ode and Greek Epigram, A. S. Farrar Gow; Latin Ode, J. R. Montagu Butler, Scholar of Trinity; Latin Epigram, Geoffrey G. Morris, Scholar of Trinity.—Pewis Medal (Latin Verse): W. C. Clearey, Scholar of Trinity.—Allen Scholarship (for Research): G. R. Mines, B.A. Sidney Sussex.

Christ's.—Junior Fellowship: Mr. C. R. Fay, Scholar of King's.

Downing.—Entrance Scholarships of £40 have been awarded to H. E. Leader, City of London; A. P. Saint, Mill Hill; C. R. Thacker, Dulwich, all for Natural Science; J. C. Karn, St. Edmund's, Canterbury, for Mathematics; and C. J. Passant, Hartley Institution, Southampton, for History.

DUBLIN UNIVERSITY.—Tyrrell Memorial Prize (Classics) : M. T. Smiley.—Wray Prize (Ethics) : divided between W. T. Stace and A. D. Tuckey.

LONDON: GILCHRIST TRUST.—Miss Marion Puck, B.Sc., Royal Holloway College, has been appointed to a Gilchrist Studentship for Women—£100 for one year.

LONDON: ROYAL METEOROLOGICAL SOCIETY.—Essays on "Climate or Weather" by Teachers: (1) £5, W. C. Upshall, Broughton, Stockbridge; (2) £3, Miss A. B. Phillips, 34 Blythe Hill, Catford; (3) £2, Albert V. Stevenson, St. Paul's School, Sunderland. Extra Prizes, £1 each: John Young, Barrook School, Wick; Henry Collar, Lavender Hill School, Clapham Junction. Essays by Pupil-Teachers: (1) £1, Arnold B. Timm, 28 Macaulay Road, Birkby, Huddersfield; (2) 10s., Miss Daily E. James, Church House, Wokingham.

LONDON UNIVERSITY.—D.Sc. in Chemistry: R. J. Caldwell, Central Technical College.—D.Sc. in Physiology: D. Henriques de Souza, University College (internal).—D.Sc. in Zoology: H. B. Fantham, University College (internal).

OXFORD UNIVERSITY.—Arnold Essay Prize: divided between R. B. Mowat, B.A., Fellow of Corpus Christi, and G. A. C. Sandeman, B.A., Christ Church.—Vinerian Law Scholarship: Wilfrid A. Greene, B.A., Fellow of All Souls.—Passmore Edwards Scholarship: H. J. Ross, B.A., Fellow of Exeter (Rhodes Scholar).—Denver and Johnson Scholarships: H. Marriott, B.A. (Keble), and E. F. Monson, B.A. (Lincoln).—Hall and Hall-Houghton Syriac Prize: D. Simpson, Wadham.—Hall-Houghton Septuagint Prizes: Senior, R. Lightfoot, Worcester; Junior, C. Saunders, St. John's.—Canon Hall Greek Testament Prizes: Senior, C. Boughton, Wadham, and R. Lightfoot, Worcester; Junior, Alfan Gaunt, Trinity.

Certificate in Regional Geography: Eva G. R. Taylor, B.Sc. Lond. (with distinction); Arthur Addenbrooke, B.A. (Corpus Christi).

Balliol.—Jenkyns Exhibition: R. Petrie; *proxime accessit* F. Clarke.

Brasenose.—Mathematical Scholarships: Open, G. H. Davis, Christ's Hospital; Somerset Thornhill Scholarship, H. L. Hart, Manchester Grammar School.

Christ Church.—Open Scholarship in Mathematics: G. W. Border, Lincoln Grammar School.

Magdalen.—Mathematical Demyship: G. G. Milu, King's School, Chester.

Merton.—Mr. P. S. Allen, M.A. Corpus, has been elected without examination to a Fellowship, on an undertaking to continue his edition of the "Letters of Erasmus."

Worcester.—Mathematical Scholarship: J. R. Grisman, Royal Grammar School, Worcester.—Mathematical Exhibitions: A. H. M. Salmon, Christ's Hospital; R. F. Wilkinson, St. John's School, Leatherhead.

SHREWSBURY SCHOOL.—Old Salopian Scholarship of £70 a year: H. B. Winton (Mr. de Winton's, Gore Court, near Sittingbourne). House Scholarships of £40 a year: Blackledge (Mr. Dealry's, The Leas, Hoylake); C. C. Banks (Mr. Banks's, Arnold House, Llandulas); and Smith (Mr. Savery's, Bramcote, Scarborough). House Scholarships of £30 a year: Walker (Mr. Savery's, Scarborough); and K. S. Rudd (Mr. Lynam's, Oxford).

## THE SUCCESSFUL TEACHER OF MATHEMATICS.

### SOME ESSENTIALS.

By JOHN S. FRENCH.

[From Bulletin No. 3 of the Association of Teachers of Mathematics in the Middle States and Maryland.]

MATHEMATICS is at once one of the most important topics in the curriculum and one of the most disliked. This unenviable position seems to be brought about by the misappropriation of its parts, on the one hand, and the failure of its teaching force to fully grasp the significance of the topics, on the other.

It is proposed in what follows to discuss the second aspect by noting some of the characteristics which seem essential to the success of mathematical instruction. One of the greatest dangers which beset the teaching of mathematical branches which are *par excellence* open to logical development is the introduction of topics and methods in no way suited to the condition of mind of the student.

I shall, then, assign first as a foundation on which is to be

built a teaching rationality a system based on genetic psychology. The study of mental process as function involving the relation of growth to development is of great import to the teacher in analyzing the mind of the student in order to adjust his work to the periods of maximal receptivity.

The second requisite for the successful teacher is a working knowledge of the history of education. It must not be forgotten that in fitting our youth to be active agents in the advancement of national character we are simply filling in one stage in this process of "effecting a higher and a more complete maturity." A knowledge of what has passed is absolutely indispensable in following out the rational lines of mental evolution; for the freedom to accept and reject is the racial inheritance of man, and upon the wisdom of the choice depends the degree of his advancement.

Emphasis has been above placed on the psychological and historical fields because they are regarded as active agents in advancing and stimulating the true powers for development—the former in providing a rational basis on which education must be founded, the latter by making our methods of study comparative. What is fundamentally important to the teacher in addition to a rational basis and a "selective history" is a proficiency in the different branches of mathematics. The subject matter is so peculiar and the methods so unique that he can hardly expect to reach the desired results for which mathematics is in the curriculum without having mastered the fundamental principles upon which all mathematical development is based. He should know mathematics as an art and as a science. In the former the teacher should note at once that proficiency in the technique of the art conditions proficiency in that art. He should then become a master of its technique. He should note carefully that diversity of method, and not variety of application, is the secret of the true division of mathematics into its various branches. The tendency at the present time is to draw the different branches closer and closer together, with the end of using that method most appropriate for the treatment of the problem at hand.

The teacher, having mastered his subject and thus able to see it in its true perspective, should proceed to determine the immediate function of the different branches in the education of the pupil and then cultivate individual methods arising through his own experience and characterized by his own peculiar qualifications.

One of the greatest drawbacks at the present time to good teaching is the lack of freedom which the teacher has in the selection of books and methods. To my mind, most mathematical subjects are more effectively taught when the teacher, using the book simply for its exercises and examples, brings in methods adapted to his own ideas and judgment. In using these methods, however, he should be careful that they fit into a universal scheme for presenting the entire topic and conform to the condition of mind of the student, on the one hand, thereby causing the least waste of nervous energy on the part of the student from the introduction of extraneous matter, and, on the other, meeting the objective demands inherent in the topic as a part of the curriculum.

If by correlation is meant the bringing into sympathetic relation of subjects closely allied by virtue of their contents and modes of development, then the great field for correlation in mathematics is in bringing its different branches into a more sympathetic relation with one another.

The unification of mathematics stands solely for one thing—commonness of subject-matter and methods, the force of which lies in the interrelation between the branches and in the continuity of their development.

In summing up, then,

1. The teacher should know himself and thus be able to fit into the lives of his pupils.

2. He should be a master of mathematical technique and should attain to a certain proficiency in mathematics as an art. With an appreciation of its scientific aspect, he should see to it that no step be taken to impugn the ultimate aim of higher mathematical development.

3. He should insist rigidly upon clear, exact, and concise expression on the part of the pupils.

4. He should adjust his work to the condition of mind of his pupils as a result of mental growth.

5. He should make continuous application of the developed principles to practical affairs and natural science.

6. His presentation should be such as will inspire confidence on the part of the pupil in him and in the future of the subject.

**PRACTICE AND PREJUDICE IN EDUCATION.\***

By Prof. J. W. ADAMSON, B.A.

A PAPER read in the vacation by a teacher to an assemblage of teachers would seem to furnish a good opportunity for reviewing principles which are commonly understood to guide the work of term-time, more particularly as the exacting nature of that work, once begun, leaves but scanty leisure and little energy for such a survey. It is indeed in the full tide of term that he who prides himself on being before all things a *practical* teacher is most ready to set theory over against practice in such a way that reality is only allowed to the latter. In moments less strenuous he may be disposed to admit that this is an extreme statement of the facts; but he will hardly be brought to confess that the only possible antithesis in this case is not that between theory and no theory, but between sound theory and unsound theory. It is pure prejudice which prevents the ultra-practical person from perceiving that he himself, being a man with ends to achieve and dependent upon means for achieving them, must needs hold a theory in which these ends and means are implied. Too frequently the theory of the severely "practical man" is formed by a casual and even fragmentary process which causes it to be narrow, uncritical, destitute of the historical sense, and, in general, far too ready to deal in abstractions. In short, some of the principles which underlie practice on severely empirical lines turn out on inspection to be prejudices.

It will be advisable at this point to put in a disclaimer. There may be some who rejoice in being described as practical teachers amongst those who do the writer of the paper the honour of being present, and he himself would be sorry to be without claim to be so called. The prejudices with which he proposes to meddle are not confined to schoolmasters nor to any type of teacher, but are entertained more or less by most of those classes of the community that take an active interest in education. The consideration of prejudices so largely shared is therefore less an offensive mode of finding fault with one's neighbour than a species of open confession, and the writer may disclaim the rôle of the purely censorious person. In the spirit of that disclaimer it is proposed to examine some of the reasons which are alleged in defence of practice.

**PREJUDICE OF SPECIAL EXERCISE.**

Probably there is no belief dealing with the activity of the mind which is more widely held than the belief that educational profit of a general diffused kind may be derived from exercises of a very special character. Thus it is said that the exact computation of long "sums" in addition or multiplication in "square" or "cube root" is a valuable task, as it tends to make pupils accurate persons—that is, persons whose intellectual and moral habit is to be accurate in all or in most circumstances. The careful and laborious writing out of a set of sums, of a piece of dictation, or other similar exercise is thought to have its chief value in establishing "neatness" as a general characteristic of the pupil who is so employed. Learning by heart almost any collocation of words is thought to be useful, because the practice "strengthens the memory"; and so on.

There is, of course, some small confirmation of this belief in the facts of habit; the belief itself has long been held, and can appeal to great names for support. Bacon has this passage in the Second Book "Of the Advancement of Learning":

There is no defect in the faculties intellectual but seemeth to have a proper cure contained in some studies; as, for example, if a child be bird-witted, that is, hath not the faculty of attention, the mathematics giveth a remedy thereunto; for in them, if the wit be caught away but a moment, one is new to begin. And as sciences have a propriety toward faculties for cure and help, so faculties or powers have a sympathy towards sciences for excellency or speedy profiting; and therefore it is an enquiry of great wisdom, what kinds of wits and natures are most apt and proper for what sciences.

The thesis is also to be found in Bacon's essay, "Of Studies."

But does the belief stand the test of experiment? Apart from the obvious fallacy of Bacon's prescription of mathematics as a cure for inattention (as though to convict a person of inattention were to cure him of it), is the reliance upon particular exercises as a means of developing general faculty justified by results? Surely, most cases of educational failure say No! while the

limited abilities of those whose education is commonly regarded as successful may also be cited in the negative. How many who, in school or University, were expert in mathematical method, in logic, or in some other specialized mode of "reasoning," exhibit in later life an equal ability in dealing inferentially with the various circumstances of their lives and fortunes?

Students of education of the experimental school have, of late years, carefully investigated this alleged general ability consequent upon special exercise, and their studies may help us to disentangle the thread of prejudice which runs through the belief we are considering. One of the best known American experimentalists is Prof. E. L. Thorndike, whose book, "The Principles of Teaching based on Psychology," contains records of observations and experiments, some of which bear directly upon our point. Thus, thirty-five girls were each subjected to two tests—one intended to gauge the capacity of observation, the other the power of readily associating ideas related in a definite manner. The "observation test" measured a girl's quickness and accuracy in picking out the A's in a sheet of capital letters, in noting in a printed sheet those words which contained certain combinations of letters, and so on. "Association" was tested by noting the quickness and accuracy with which a girl named the opposites of words suggested to her. Thorndike gives the results in each of the thirty-five cases examined. It will suffice to take the first ten here, using the letters in alphabetical order to indicate girls ranked in order of their capacity of observation so tested, and setting down in a third column the rank of the same girls in power of rapid, accurate association. The figures may be commended to the attention of those who anticipate an all-round improvement of intellectual power following upon systematic exercise of a supposed faculty of observation:—

Person.	Observation.	Rank in Order of Association.
A. ....	1	5
B. ....	2	16
C. ....	3	1
D. ....	4	2
E. ....	5	29
F. ....	6	26
G. ....	7	10
H. ....	8	24
I. ....	9	27
J. ....	10	14

Again, twenty-five boys were tested in their ability to discriminate lengths, and then in their power to discriminate weights; the results in the first ten cases were as follows, making use of the same arrangement of the three columns as before:—

Person.	Rank in Order of Discriminating Lengths.	Rank in Order of Discriminating Weights.
A. ....	1	4
B. ....	2	8
C. ....	3	24
D. ....	4	12
E. ....	5	5
F. ....	6	17
G. ....	7	2
H. ....	8	14
I. ....	9	6
J. ....	10	7

The boy who stood first in the weight test was twenty-third—that is, last but two—in ability to note differences of length. So highly specialized are the forms of human capacity!

The following passage from Thorndike's book refers to observations upon the general effect of special exercises:—

Bennett found that young children at the end of several months' training in discriminating different blues had made great improvement, [that they] had improved nearly as much in telling apart different degrees of saturation of other colours, but had improved little, if any, in telling apart lengths or weights. Woodworth and Thorndike found that adults who by special practice had improved greatly in their accuracy in estimating short lines had made no improvement in their power to estimate long lines; and that adults who were trained in judging the size of surfaces of certain shapes and sizes until they had made a decided improvement, showed only about a third as much improvement with areas of a different size and shape.—(Op. cit., page 240.)

The "practical schoolmaster" may object that there is too little in common between these laboratory exercises and his own daily work for him to regard the records as convincing. He may be invited to ponder the following experiment reported by

\* Lecture delivered at the Winter Meeting of the College of Preceptors.

Dr. W. C. Bagley in "The Educative Process." Careful note was taken of the neatness with which their school work as a whole was done by certain classes of a school attached to the Montana State Normal College. These classes were then specially trained to a high degree of excellence in neatness of setting down papers in arithmetic, no special training being given meantime in the mode of setting down papers in other subjects. Finally stock was again taken of the neatness of the school work as a whole. "The results are almost startling in their failure to show the slightest improvement in language and spelling papers, although the improvement in the arithmetic papers was noticeable from the very first."

The inference from these observations and from the records of similar trials of the effect of special exercises upon general capacity is that training improves capacity within the special field, that it tends to improvement in fields allied to the special field, but that the improvement very rapidly diminishes as we pass to fields but slightly remote from these. The tea-taster's professional ability rests upon a form of memory which can be "trained," "strengthened," or "improved" by tea-tasting, but which remains impervious to "dates" and Latin grammar. An improvement in any one mode of mental activity means an improvement in those other modes which share with it a common element. Learning Latin grammar by heart will give increased capacity to memorize any other grammar and, to a less extent, a better power of learning by rote "tables," "dates," and other printed matter.

There is, in short, great exaggeration in the belief that a general and widely diffused power is the outcome of exercises quite special in their nature, the truth being that the resultant ability moves within fairly narrow limits. The psychology of habit is the explanation both of the increased power within these boundaries and of any casual overflow into adjacent spheres, as when a habit of careful manipulation of small or frail objects is occasionally set up or encouraged by work in the chemical laboratory. Bacon's definite prescription of studies as instruments of cure is not warranted by experience; still less, of course, are we entitled to expect the same general outcome to each and all of half-a-dozen different ways of teaching one and the same subject, whether it be Greek or chemistry.

The prejudice (as we now seem entitled to term it) that general power follows particular exercise in large measure affects thought and practice concerning curriculum and method in many different ways, and the prejudice is strengthened by the natural, almost instinctive, function of generalizing which marks human intelligence. The prejudice and the disposition unite in singling out as educational instruments of the highest rank such studies as more readily lend themselves to generalization and to abstraction, since these promise to be rewarded by the most wide-reaching results or by the highest return for the work expended. In the next place, the teaching addresses itself at the earliest moment to the more abstract and formal side of the studies so selected, in the mistaken belief that, in that way, the maximum of mental training will be secured.

#### MATTER AND FORM.

So it comes about that matter or content is regarded as of small importance compared with form. Throughout the history of schools their temptation has always been to adopt this attitude towards form and matter, an attitude which disregards the synthetic fashion in which the abstract and general are slowly developed from the concrete facts of our experience. Hence the rift, which sometimes becomes a yawning gulf, between life in the schoolroom and life outside its walls, and Seneca's complaint is justified, "Non vitæ, sed scholæ discimus."

This disposition to over-value the formal and abstract at the expense of the material ends in a failure to appraise positive knowledge at its just worth. They are of this temper who, with Locke, place "learning last and least," who tell us that it does not matter what we learn—the great thing is *how* we learn it.

#### GYMNASTIC STUDIES AND "USEFUL" STUDIES.

From such a prejudice it is a short step to the position that it is a profitable division of studies which separates them into those which afford training, and are therefore precious in the sight of the educator, and those which are merely "useful" and scholastically of no account. The merits of this disinterested point of view are sufficiently recognized in this country, and there is no need to rehearse them; but it is no small demerit that many of the failures and inefficiencies of "a nation of amateurs" are traceable to it.

The belief that the main business of the schoolmaster is to provide and supervise mental gymnastic is based upon the authority of an uncritical and unsound psychology, and with it should stand or fall. We are frequently assured that the conception of the mind as an aggregate of powers, ill defined in number and virtually independent of each other in their mode of activity, is a conception long since exploded, and that to deal with it seriously is but "flogging a dead horse." No psychologist accepts it as belonging to his science as that exists to-day; but the student of education comes across it daily in the schoolroom, in the Committee of the Education Authority and in the Press, as the real though unavowed explanation of opinions and practices deemed essential. The denial of the validity of that account of mental process and mental life which is known as the "Faculty Psychology" involves in very grave doubt the educational value of the theory upon which much practice is consciously or unconsciously based. Moreover, if that psychology misinterprets the facts of consciousness, it is reasonable to suppose that prejudices instigated by it are positively harmful to education.

In insisting upon the complex and organic nature of the mind which the Faculty Psychology fails sufficiently to portray, there is no necessary denial of the existence of intellectual powers—"faculties," if you will—which are susceptible of being exercised. The phenomena of habit are there to admonish all not to make such a mistake. Studies may be used to encourage, to foster, and to exercise certain instincts or aptitudes, to give rise to certain habits, or, by the preoccupation they afford, to prevent the formation of yet other habits. Ability acquired in certain definite modes of mental activity may in a small measure increase ability in yet other modes allied in their nature to the former. In this very general sense, "Abeunt studia in mores." But neither psychology nor experience permits us to indulge the exaggerated hopes frequently held out to us that any one form of exercise or study is able of itself to exert a comprehensive influence upon the mind and life of the student. It is not denied that you can make a boy habitually write neat dictation exercises; it is denied that that particular habit will make him neat in a number of other ways also, as, for example, in dress or in person.

The prepossession with form and with formal and abstract studies, which the school so frequently exhibits, issues in the prejudice that only those minds are deserving of schooling which take readily to studies of this kind. The prejudice is one to which the schoolmaster is peculiarly liable, since he owes his own career to precisely the sort of ability which succeeds in these studies. A franker recognition of the facts of life constrains us to deny that all intellectual excellence is monopolized by abstract thinkers and men of the academic type of mind in general. Schools contain not only boys and girls of this exceptional sort, but a much greater number whose excellence lies rather in concrete thinking and making or in the moral qualities of leadership and in action generally. If abilities of this kind are of service to the community, and if the schools are to discharge their social function, then the schools must provide curriculum and teaching which will cultivate the intelligence of the doer no less than that of the formal thinker. It was the failure of the sixteenth-century schools, as a whole, to try to do this, which led men of the world to found the "academies" of France and Germany, and by their means to educate the courtier, statesman, soldier, and man of action. Plato's philosopher, conceived as the ideal ruler, is neither schoolmaster nor University don, but an altogether exceptional combination of profound thinker and active man of affairs, trained and tested in the school of experience as well as in the schoolroom.

#### PUPIL'S OUTSIDE-SCHOOL KNOWLEDGE.

Plato's curriculum for the philosophers is a reminder that the school is but one of several agencies in the education of boy or man; forgetfulness of the fact is responsible for a prejudice which is perhaps confined to novices in the art of teaching. These are prone to base their practice on the assumption that a child's knowledge is limited to what his schoolmaster imparts to him. The constitution of the child's mind makes this impossible; nothing can prevent a boy from interpreting what he learns in school by the light of previous knowledge, whether that was acquired in school or elsewhere. Indeed, a school curriculum which gained no help whatever from without would furnish an education for a pedant only; and schools are mischievous to the extent that they create a world of their own which owes nothing to the common light of day. The instructor who sees in his

pupil's mind only a blank tablet wastes time, dissipates energy, and kills interest.

TEACHING THE RUDIMENTS.

This particular prejudice is, perhaps, at the back of another even more widely held—namely, that any one can teach rudiments. There are two considerations which throw doubt upon the belief. In the first place, a person who has himself only just emerged from the rudiments of a study is not in a position to teach those rudiments to another. He has not the logical comprehension of the study, the intellectual grasp of it as a whole, which is necessary to one who is expected to view details in their true relationship. He does not see the forest for the trees, and is apt to lose himself in the maze and so confound his pupil, or else to seek safety in a few stock phrases. If logical considerations only were to rule, then the best teacher of rudiments is the master of the study. But there is another consideration beside the logical. The learner of rudiments is usually young and of immature, ill informed mind. To teach him well, something more than mastery of the study is required. His teacher must know the characteristic weaknesses and strength, the normal modes of activity, of such minds as his. In other words, his teacher should be a man of experience, or at least of insight. Nevertheless, schools sometimes commit the teaching of rudiments to their rawest practitioners. Hence arises a further prejudice to the effect that teaching rudiments is dull work. In the cases just mentioned how could it be otherwise? A bungling operator neither gives nor secures pleasure.

THE MIND OF THE CLASS.

The relation of the teacher to his class, purely as a class, has developed practices which open the way to mistake and prejudice. "The mind of the class," that mind to which most of the teacher's appeals must be made, is not merely the aggregate or sum of the minds, even of the attentive minds, which are in the classroom. Every assemblage of persons intent upon a common object generates within itself a sympathy, an excitement, and an activity which differs in intensity, and sometimes even in kind, from what might be expected from any one of its members considered individually. The fact has long been known in schools, as the familiar phrase, "the sympathy of numbers," bears witness. It is this corporate mind over which the teacher establishes control by his alertness and by the infectious interest which he displays in the task of the moment.

One or two consequences flowing from the existence of this "mind of the class"—consequences which have been discovered experimentally—may be noticed. Perhaps the most striking result of class work is the tendency to bring about a common level of performance, both in quantity and in quality. This common level is in favour of the weaker members of the class, whose work it tends to improve: even the "duffers" are moved onward by the momentum of the common effort. The younger the pupils and the bigger the class the more marked the effect. This is not an argument in favour of big classes, but the contrary. The larger the class the simpler and the more mechanical any effort in common must be. David Stow's classes of two hundred children simultaneously instructed through question and answer by one man do not suggest the question, Is it possible? but, Is it worth doing?

Yet not all school exercises are done best under the stimulating presence of the "mind of the class." Meumann tested the power of concentration possessed by pupils of eight or nine years of age by uttering words of two syllables at intervals of a second, and then getting the children to write the words from memory. The tests were addressed first to pupils singly and apart, and secondly to the same pupils working as members of a class. The results, stated as averages, were as follows:—

Dictation of—	AVERAGES.			
	Single Pupils alone.	Single Pupils in Class.	Single Pupils alone.	Single Pupils in Class.
3 words .....	All words right	.....	All words right	.....
5 " .....	4:09 " .....	.....	3:4 " .....	.....
7 " .....	4:06 " .....	.....	3:2 " .....	.....

Meumann also found that exercises like "composition" which demanded imagination were done better alone than in the class. No doubt in such cases the superiority of individual work over work in class is due to the more direct appeal for his best which the former makes to the scholar. The difference between 4:06 and 3:2 in the foregoing tables is a measure of moral difference, representing either the indifference of many members of the

class to the result of the test, or their power of "spurling," according to the view taken by the reader of the figures.

In either case, the point is a significant one for the form-teacher. The advantage of "the mind of the class" to the dull and backward pupil is especially felt in such common activities (such doing rather than reflecting) as physical drill, singing, reading aloud, reciting, pronouncing French or German words in chorus. But take away the momentum afforded by simultaneous work and the dullard as an individual is no better than before; indeed, he is so much the worse, because he has been deprived of strictly individual practice. But it is the individual mind at which genuine instruction aims, and it is therefore wise to discount heavily these activities in common when gain and loss are being estimated on an individual basis. It is a question whether some of the practices named (excused though they are by the prejudice that they save time or get through a great deal of work) should be employed at all. The slovenliness and inaccuracy, to say nothing of the shirking, which so commonly accompany "simultaneous reading" in English are recognized disadvantages which should warn modern language teachers against the use of the chorus in their own teaching.

The so-called "disciplinarian" sometimes conceives of the "mind of the class" in a manner altogether illegitimate; his point of view is that there is only one mind (or body) in the class, and that in consequence the appropriate procedure resembles that of the drill-sergeant. All heads must be poised in one way, all arms must occupy the same position, one and the same reply to a question is expected from all pupils and no other is accepted. In a word, the individuality of the members of the class is studiously discouraged, and even repressed. The only comfort to be extracted from the situation lies in the thought that the stronger natures will find a way of escape, that the outrage on mind and body will not in their case entirely succeed. But for the others the consequence is only too likely to be the machine-made and machine-like mind which is but a caricature of education, and which ought not to be the lot of even those who are only moderately endowed with intelligence.

(To be continued.)

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on March 14. Present: Sir Philip Magnus, M.P., President, in the chair; Prof. Adams, Prof. Adamson, Dr. Armitage Smith, Mr. Baumann, Mr. Brown, Mr. E. A. Butler, Mr. J. L. Butler, Mr. Charles, Miss Dawes, Mr. Eve, Mr. Maples, Mr. Millar Inglis, Dr. Moody, Miss Punnett, Rev. Dr. Scott, Mr. Starbuck, Mr. Storr, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Professional Preliminary Examination had been held on the 3rd to the 5th of March, and had been attended by 295 candidates.—He read a letter from the Board of Education in reference to the Memorial of the Council respecting representation of the College on the Teachers' Registration Council to be constituted under the Education (Administrative Provisions) Act of 1907.

The Diploma of Licentiate was granted to Miss E. M. Greenough, and that of Associate to Miss M. A. Hughes, who had satisfied the prescribed conditions.

The report of the Education Committee was submitted. The report referred to the proceedings at a Conference which was held at the College on February 29 to consider proposals for the constitution of a Registration Council.—The report was adopted, and it was resolved that the Council of the College express their general acceptance of the scheme for the constitution of the Registration Council as embodied in the resolutions passed at the Conference.

The following persons were elected members of the College:—

- Miss F. A. Caley, Collegiate School for Girls, Crescent Road, Wokingham.
- Mr. E. M. Eagles, M.A. Cantab., 5 Winsham Grove, Clapham Common, S.W.
- Mr. C. E. Prior, A.C.P., Lincoln House, Harrow.
- Miss F. A. Wood, L.C.P., Home and Colonial College, Wood Green, N.

The following books had been presented to the Library since the last meeting of the Council:—

- By the AUTHOR.—Waldegrave's Examples in Metric System Arithmetic.
- By G. BELL & SOSS.—Hall's Selections from Rende's 'The Cloister and the Hearth'; Luckhurst's Scott's Legend of Montrose (abridged).
- By BLACKIE & SON.—Blackie's English Texts (Cowley's Essays, Ruskin's Byzantine Churches of Venice, and Thucydides' Siege of Syracuse); Bagnall and Vivier's Melere's L'Avare et Les Femmes Savantes; and Racine's Athalie et Andromaque; Barbe's Deslys' L. Zouave, Ac.; Mrs. Fraser's Le Chalet Forenet;

Guiton's *Morax's La Princesse Feuille-Morte*; Michell's *Mérimée's Le Coup de Pistolet*; Park's *About's Le Roi des Montagnes*; Robb's *Selections from Scott's Tales of a Grandfather*.  
 By the CAMBRIDGE UNIVERSITY PRESS.—Barnes's *The Two Books of the Kings* (Cambridge Bible for Schools).  
 By the CLARENDON PRESS.—Collins's *More's Utopia*.  
 By MACMILLAN & Co.—*The International Geography*, Section I.; *Brooksbank's Essay and Letter Writing*; *Cotterill's More's Utopia*.  
 By J. MURRAY.—*Proceedings of the Classical Association, 1907*; *Croker's Stories from the History of England*; *Hall's Latin Translation at Sight*; *Hartog's Sand's La Mare au Diable*.  
 By G. PHILIP & SON.—*Bennett and Hand's Play-Drill*; *Young's Rational Geography*, Part II.  
 Calendars of the University of Wales and of the Transvaal University College.  
 Register of Members of the General Council of the University of Glasgow.

**COLLEGE OF PRECEPTORS.**

**PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.**

The following is a list of successful candidates at the Examination held in February, 1908:—

*Class I.*  
 Crabtree, J. D.

*Class II.*  
 Shackleton, Miss M. H.

**PROFESSIONAL PRELIMINARY EXAMINATION—PASS LIST. MARCH, 1908.**

The Professional Preliminary Examination was held on the 3rd, 4th, and 5th of March, in London, and at seven other local centres, viz., Birmingham, Bristol, Cardiff, Leeds, Liverpool, Manchester, and Newcastle-on-Tyne. The following candidates obtained Certificates:—

**First Class [or Senior].**

*Pass Division.*

Barr, D. H. Gillett, S. H. Jones, O.  
 Brooks, Miss A. D. *e.f.l.* Hobkirk, R. L. Pocock, F. P.

**Second Class [or Junior].**

*Honours Division.*

Cooper, L. G. *l.* Greville, E. R. G. McKay, W. K.  
 Cresswell, T. H. *l.* Hanreck, S. Pitt, E. *f.l.*  
 Fox, R. Kinnear, J. *g.l.* Sinderson, H. C.

*Pass Division.*

Anderson, A. D. Hanafin, J. G. Rowe, A. R.  
 Bain, J. L. *a.l.* Hill, F. T. *l.* Russ, S. H.  
 Bovill, Miss R. H. Hoffmeister, N. Salsbury, A. F.  
 Briscoe, E. V. Horder, I. W. G. *l.* Sampson, W. E. A.  
 Brock, E. A. Jackson, F. Saunders, G. V.  
 Brown, T. A. Kemp, J. W. Seedhouse, C. N.  
 Buckell, W. D. W. Kind, R. G. Simpson, R. J.  
 Buer, W. B. Lewis, J. M. *l.* Slaughter, C. A.  
 Butler, M. K. *a.* Macintosh, E. H. Smith, F. W.  
 Cockcroft, W. L. *f.l.* Mason, H. B. *l.* Smith, J. M.  
 Cooke, H. H. Matson, R. C. Spicer, H. W.  
 Cutting, J. A. W. Maurice, C. H. P. Stebbings, J. M.  
 Davies, W. McGregor, D. A. S. Stickland, H. J.  
 Deeks, G. Moore, G. K. Thomas, E. W. *l.*  
 Dermer, E. R. Napier-Ford, G. S. Thorman, F. E. A.  
 Drew, A. J. Ormsby, F. L. *l.* Thwaites, L. T.  
 Emmerson, C. L. Packham, A. L. Wallace, Miss H. J.  
 Evans, C. H. *l.* Palmer, C. N. Ward, E.  
 Fisher, T. H. Peak, N. Watson, G. W.  
 Fortnum, J. Phillips, P. Watson, J.  
 Galbraith, D. H. A. Price, H. P. Welstead, E. M.  
 Gick, R. W. *g.* Pullan, W. G. White, C. F. T.  
 Glaibsy, L. N. *l.* Reeson, T. F. Williams, H. B.  
 Gordon, M. Roberts, E. R. Wilson, G. R. C. *f.*

**CLERGY MUTUAL ASSURANCE SOCIETY,**

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1828.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.  
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.  
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to  
**THE CLERGY AND THEIR RELATIVES.**

**ALL PROFITS BELONG TO THE MEMBERS.**

Accumulated Fund, £4,242,820. Annual Income, £453,897.

Bonuses Distributed, £4,256,464.

**LOW PREMIUMS. LARGE BONUSES.** Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

**NEW AND SPECIAL POLICIES.** Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

**1. WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one-half the usual rate—during first ten years.

**2. PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

**SPECIMEN OF RATES FOR £1,000, WITH PROFITS.**

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

# BLACKIE & SON'S LIST

JUST PUBLISHED.

### Magnetism and Electricity and The Principles of Electrical Measurement.

By S. S. RICHARDSON, B.Sc., Associate of the Royal College of Science, London; Lecturer in Physics, Municipal Technical School, Liverpool. Crown 8vo, cloth boards, 5s. net.

The object of this book is to provide a sound and systematic course of study in the main principles of Electricity and Electrical Measurement. It is written to meet the requirements of students who have already, in a first year's course, made some acquaintance with the elementary descriptive parts of the subject, and are commencing the study of Electricity in its more quantitative aspects—either as a branch of pure Physics or as a preparation for a course of Applied Electricity.

### Elementary Electrical Engineering.

By JOHN M. SHAXBY, B.Sc., Assistant Lecturer, University College of South Wales, Cardiff. Copiously Illustrated. 3s. net.

Written to meet the needs of practical students, as an aid to class work, and for private reading.

### Heat Shadows.

By WALTER JAMESON, B.Sc., Author of "Graphs for Beginners." 6d. net. Some New Experiments in the Conduction and Radiation of Heat; for Junior Class work.

### A Text-Book of Organic Chemistry.

English Translation from the German of A. BERTHESEN, Ph.D. Edited by J. J. SCDDBOROUGH, Ph.D., D.Sc., F.I.C. New Edition. Revised to date. 674 pp., crown 8vo, cloth, 7s. 6d. net.

### Systematic Inorganic Chemistry from the Standpoint of the Periodic Law. A Text-Book for Advanced Students.

By R. M. CAVEN, D.Sc., and G. D. LANDER, D.Sc. Crown 8vo, cloth, 6s. net.

### Elementary Geometry of the Straight Line, Circle, and Plain Rectilinear Figures.

By CECIL HAWKINS, M.A., Senior Mathematical Master at Haileybury College. Crown 8vo, cloth, with or without Answers, 3s. 6d.

### The Longer French Texts.

Printed in large Type. Cloth limp, 81. each. Brief Notes, Questionnaire, Memory List of Useful Phrases and Vocabulary. Among the volumes now ready are:

- About—*Le Rol des Montagnes.*
- Deslys—*Le Zouave.*
- Moreau—*Contes à ma Sœur.*
- Chateaubriand—*Le Dernier Abencérage.*

### The Little French Classics.

Price 4d. each book. All French authors in prose and verse, from the *Chansons de Geste* to *Daudet* and *Paul Bourgot*.

### Récits tirés des Classiques français.

6d. each. Edited by MME. C. BAGNALL, of Clapham High School, and MLE. VIVIER.

The Stories of the great Dramatists told in simple French, suitable for Lower and Middle Forms.

- Cornille—*Le Cid et Horace.*
- Racine—*Athalie et Andromaque.*
- Molière—*L'Avare et Les Femmes Savantes.*
- Hugo—*Hernani et Ruy Blas.*

### The Little German Classics.

Price 6d. each volume. The leading German authors in poetry, story, and drama.

### A Brief Survey of European History.

By ARTHUR HASSALL, M.A. An excellent general sketch of European History from Charlemagne to the present time. Crown 8vo, cloth, 4s. 6d.

### Landmarks of European History.

By E. H. M'DONOGALL, M.A. Oxon., late Assistant in the Tewfikieh School and Training College, Cairo. With many Coloured and Sketch Maps, Index, &c. 3s. 6d.

### Heroes of the European Nations.

From Early Greece to Waterloo. By A. R. HOPE MONCRIEFF. 1s. 6d.

### Readings in English History.

From Original Sources. Edited by R. B. MORGAN, B. Litt., and E. J. BAILEY, B.A. Illustrated. Vol. I., B.C. 54 to A.D. 1154, 2s. Vol. II., 1154 to 1485, 2s. 6d. Vol. III., 1485 to 1683, 2s. 6d. (*Just ready*).

### A Brief Survey of British History.

By G. TOWNSEND WARNER, M.A. With Tables, Summaries, Maps, Notes, &c. 1s. 6d.  
"The best English History for younger pupils. Used in all leading Preparatory Schools, and the Royal Naval College, Osborne."

## BLACKIE'S ENGLISH TEXTS.

Edited by W. H. D. ROUSE, Litt.D.,  
Head Master of the Perse School, Cambridge.

EXCELLENT MATERIAL FOR THE LITERARY STUDY OF ENGLISH.

In cloth covers, price 6d. each.

- |  |                                     |
|--|-------------------------------------|
| Froissart— <i>Border Warfare.</i>      | Malory— <i>Coming of Arthur.</i>    |
| Froissart— <i>Reign of Richard II.</i> | Malory— <i>Knights of the Round</i> |
| Froissart— <i>Crecy and Poitiers.</i>  | Cowley's <i>Essays.</i> [Table.]    |
| Irving— <i>England's Rural Life.</i>   | Ruskin— <i>Sesame and Lilies.</i>   |

The above volumes have recently been added. Complete List on application.

### Combined Course of Literary Reading and Composition.

Illustrated from Famous Pictures. Edited by LEWIS MARSH, M.A. 2s.

### English Poetry for the Young.

Selected by S. E. WINBOLT, M.A. A chronological selection of English poetry, clearly printed and well bound in cloth. 1s.

### The Plain Text Shakespeare.

The greater Plays. Text only. No Notes. In limp cloth cover. Price 4d. each.

JUST PUBLISHED.

### The Teaching of English.

By A. E. ROBERTS, M.A., Principal Lecturer in English at the Islington Day Training College, and A. BARTER, L.L.A., late Head Mistress of the Braintree Pupil-Teacher School. Price 2s. net.

Much pioneer work lies before the English teacher, and the present book is an attempt to suggest some of the lines along which he may proceed. No space has been devoted to the teaching of reading and writing as mechanical processes, since these subjects have been frequently treated of in books on school method. The emphasis has been laid on the teaching of literature and of composition.

Strongly bound in cloth, 4s. 6d. net. 872 pages, containing 2546 columns.

### The Student's English Dictionary.

By JOHN OGILVIE, LL.D. Edited by CHARLES ANNANDALE, M.A., LL.D., Editor of "Ogilvie's Imperial Dictionary," &c., &c. With many hundreds of Illustrations in the Text and a Series of useful Appendices.

The well-known Student's Dictionary is now issued at a greatly reduced price in the belief that thereby it will appeal to a very much wider circle of readers, and will meet with a correspondingly increased sale. It would not be practicable to publish such a large and handsome volume for the money were it not that a largely extended sale may be depended on. There is no difference between this issue and the previous paper, printing, binding, &c., are equally good, though the volume may now be had for 4s. 6d.

## BLACKIE'S LATIN TEXTS.

General Editor: Dr. W. H. D. ROUSE.

This Series is intended for use during the first two or three years of Latin.

Price 6d. and 8d. net each Book.

The following Scholars are contributing volumes to this Series:—

- |                       |                          |
|-----------------------|--------------------------|
| Prof. J. P. Postgate. | Mr. S. E. Winbolt.       |
| Prof. J. S. Reid.     | Mr. W. H. S. Jones.      |
| Dr. W. H. D. Rouse.   | Mr. E. Seymour Thompson. |

### A General Vocabulary to Virgil.

Prepared under the Editorship of A. GRAHAM, M.A. Crown 8vo, cloth, 1s.

### A General Vocabulary to Caesar's Gallic War.

Prepared under the Editorship of A. GRAHAM, M.A. Crown 8vo, cloth, 1s.

These vocabularies have been prepared for use in schools where the pupils are not at first provided with Latin Dictionaries of their own. They contain all the words that occur in the *Æneid*, *Bucolics* and *Georgics* of Virgil, and *De Bello Gallico* of Caesar. The advantage of these Vocabularies is that they can be used with any Edition of these Classics.

### A Latin Course.

By E. H. SCOTT, B.A., and FRANK JONES, B.A. First Course, cloth, 1s. 6d. Second Course, cloth, Illustrated, 2s. 6d.

### A First Latin Grammar.

By E. H. SCOTT, B.A., late Head Master of Boys' Secondary School, Barbeton, Transvaal; and FRANK JONES, B.A., Assistant Master, King Edward's School, Aston, Birmingham. Crown 8vo, cloth, 2s.

Write for full particulars to BLACKIE & SON, LTD., 50 OLD BAILEY, E.C.

## THE ONLY EFFECTIVE & ECONOMIC METHOD

Of "WEIGHTING" and LAYING the

# DUST

(See the Official Memorandum on the Cleansing and Disinfecting of Schools)

IS TO USE

# FLORIGENE

(Regd.)

(Awarded BRONZE MEDAL of the ROYAL SANITARY INSTITUTE)

or "**FLORIGENE**" (No. 2)

which in addition is a powerful

**GERMICIDAL DISINFECTANT.**

Either of the above Preparations should be applied to ALL WOOD, LINOLEUM, and other FLOORS in

## SCHOOLS, LABORATORIES,

ART GALLERIES, LIBRARIES, MUSEUMS, &c.

FLOORS may be dressed during the School Term, but TO OBTAIN THE BEST RESULTS it is advisable that they should be treated

## EARLY IN THE EASTER VACATION

(THREE TIMES A YEAR ONLY),

so as to allow as long as possible for the fluid to be absorbed, but the Floors can be walked upon immediately after treatment if desired.

"FLORIGENE" also purifies the Atmosphere, Preserves the Floors, Saves Time and Labour.

"FLORIGENE" is a fluid which can be easily and quickly used by the unskilled, and each application lays the dust for 2 to 4 months, or longer, according to the wear.

It is not sticky, but the dust and dirt absorb the "FLORIGENE" from the impregnated floors and thus become "weighted," so that when the floors are swept in the ordinary manner, the sweepings do not rise, but roll in front of the broom.

No Scrubbing or Sprinkling of Floors necessary, but Floors may be washed if preferred.

BOOKS, FURNITURE, APPARATUS, etc., seldom require dusting or cleaning.

"FLORIGENE" is an aid to the Prevention of Throat Irritations and School Epidemics. The additional Cost (if any) is small compared with the HYGIENIC, LABOUR SAVING and other IMPORTANT ADVANTAGES.

"FLORIGENE" can be applied with a Cloth or Mop, but we recommend our unequalled

### PATENT IMPROVED SPREADER

(which can be used by any novice) for better distribution and saving in labour and fluid. We also supply

specially designed "FLORIGENE" BROOMS.

"FLORIGENE" is extensively used in H.M. Royal Colleges, Science and Art and other Government Buildings, also Public and Private Colleges, Laboratories, Schools, Libraries, Museums, &c. &c.

## CURRENT EVENTS.

At the meeting of members of the College of Preceptors on April 1, Sir Edward Busk will deliver an address on "Moral Education," with special reference to the approaching International Congress. The chair will be taken by Lord Avebury.

M. LE PASTEUR RAMETTE will address the Société Nationale des Professeurs de Français en Angleterre on "Sully Prud'homme et son Poème 'Le Bonheur'" at the College of Preceptors, on April 25, at 4 p.m.

UNDER the auspices of the Geographical Association, Mr. A. T. SIMMONS, B.Sc., will submit "Notes on Geographical Laboratories" at University College, London, on April 10, at 8 p.m. Tickets (1s. each) from Mr. J. F. UNSTEAD, 5 Wiverton Road, Sydenham, S.E.

MR. M. FRIEDEBERGER, Ph.D., will lecture to the Child Study Society, London (Parkes Museum, Margaret Street, W.), on "The Mechanism of Speech and Stammering," on April 2, at 8 p.m.

VACATION Courses for Teachers of Young Children will be held during the first fortnight of August at the Froebel Educational Institute, Talgarth Road, West Kensington. Lectures on "Child Nature," by Miss A. RAVENHILL and by Dr. SLAUGHTER; on "Methods" (illustrated by a Demonstration Class), by Miss M. E. FINDLAY. Courses on "Nature Study" and expeditions. Prospectuses from Miss M. E. FINDLAY, Briar Cottage, Leigh-on-Sea, Essex.

MR. JOHN RUSSELL, M.A., will give a specimen moral lesson on "England expects every Man to do his Duty," at 18 Buckingham Street, Strand (Moral Instruction League), on April 6, at 7 p.m. Open.

A TRAINING Course for Lecturers, arranged by the London University Extension Board and consisting of 10 weekly meetings, will be held in the Summer Term, commencing April 27 (6-8 p.m.). Four lectures on "The Art of Lecturing" will be given by Prof. ADAMS, in the University, and four lectures and demonstrations on "The Management of the Voice" by H. H. HULBERT, Esq., M.A. Oxon., M.R.C.S., L.R.C.P., Lecturer on Voice Training at the London Day Training College and for the London County Council. These will be followed by six meetings for practical work in voice production and lecturing. Particulars from the Registrar of the University Extension Board, University of London, South Kensington, S.W.

THE Cambridge Local Lectures Summer Meeting will be held July 18-August 13 inclusive. The chief subject of study will be Ancient Greece: but lectures have been arranged in Natural Science, Education, Social Economics, and Theology, with courses mainly for foreign students.

Inaugural lecture by the Master of Trinity. Full programme ready in May. Forms of entry, &c., from the Rev. D. H. S. Cranage, M.A., Syndicate Buildings, Cambridge.

THE National Agricultural Examination Board (16 Bedford Square, W.C.) will hold an examination for the National Diploma in Agriculture at the University of Leeds on April 27.

THE International Congress for the History of Religions will hold its third meeting at Oxford in September.

THE fifteenth International Congress of Orientalists will be held at Copenhagen, August 14-20.

THE third International Congress for the Development of Drawing and Art Teaching is to be held in London from August 3 to 8.

THE Board of Education have just issued a list of twenty-eight holiday courses to be held at various places on the Continent at different times during the present year, showing dates, fees, fares, cost of boarding, principal subjects of instruction, address of local secretary, and other details. Copies free on application to the Board of Education Library, St. Stephen's House, Cannon Row, London, S.W.

THE Dover Pageant, under direction of Mr. Louis N. Parker, is fixed for July 27 to August 1. A Folk Play will be enacted in the grounds of Dover College (5,000 seats); booking office open daily on and after February 1 (2 Effingham Crescent, Dover).

THE University of Oxford has conferred Honours. the honorary degree of M.A. upon Major Martin Hume; and the honorary degree of D.Litt. upon Mr. C. M. Doughty, author of "Travels in Arabia Deserta."

THE University of Durham has conferred the honorary degree of D.C.L. upon Baron Heyking, who for some years has been the Russian representative in the North-East of England and in Scotland, and has now been appointed Russian Consul-General for India.

THE following have been appointed Fellows of University College, London:—

Mr. Henry Higgs, LL.B., M.A., F.R.E.S., F.S.S.; Mr. Edward Charles Cyril Baly, F.I.C.; Dr. Gilbert Charles Chubb, D.Sc.; Mr. Clive Cuthbertson, B.A.; Dr. Archibald Montague Henry Gray, M.D., B.S., M.R.C.P., M.R.C.S.; Mr. Philip Maynard Heath, M.S., M.B., F.R.C.S.; Prof. George R. Murray, M.D., M.A., F.R.C.P., M.R.C.S.

THE Senate of Glasgow University have resolved to confer the following honorary degrees (April 22):—

D.D.—Rev. John Brownlie, United Free Church, Port-Patrick; Rev. J. Estlin Carpenter, M.A., D.Litt., Principal of Manchester College, Oxford; Rev. John Ferguson, Linlithgow; Rev. Prof. C. Lucien Gautier, Ph.D., Geneva; Rev. David Smith, M.A., St. Andrew's United Free Church, Blairgowrie; Rev. Robert Thomson, M.A., Rubislaw Parish, Aberdeen.

LL.D.—George T. Beilby, F.R.S., F.I.C., F.C.S., Chairman of the Governors of the Glasgow and West of Scotland Technical College; Colonel David Bruce, C.B., M.B., F.R.S., D.Sc., War Office, London; James J. Dobbie, M.A., D.Sc., F.R.S., Director of the Royal Scottish Museum, Edinburgh; Robert Kidston, F.R.S., F.G.S., Stirling; David M. Cowan, Honorary Treasurer of the Glasgow Royal Infirmary; John C. M'Vail, M.D., County Medical Officer, Stirlingshire and Dumbartonshire; Neil Munro, author and journalist; Right Hon. Charles S. Parker, P.C., M.A., Hon. Fellow of University College, Oxford, formerly M.P. for Perth; John S. Templeton, Glasgow.

THE University of Calcutta, on occasion of its jubilee, has conferred the following honorary degrees:—

D.Litt.—Sir Andrew Fraser, Lieut.-Governor of Bengal.  
D.Sc.—Prof. Arthur Schuster, Manchester; Rev. Father E. Lafont, S.J., C.I.E., Rector of St. Xavier's College; T. H. Holland, F.R.S., Director of the Geological Survey of India; G. Thibaut, Ph.D., C.I.E., the Sanskrit scholar.

LL.D.—Sir Subbaiyar Subramania Aiyar, Dewan Bahadur, K.C.I.E., Judge of the High Court, Madras; Hon. Mr. Justice Pratulechandra Chatterjee, Rai Bahadur, M.A., B.L., C.I.E., Judge of the Chief Court of the Punjab.

M.D.—Surgeon-General G. Bomford, M.D. Lond., C.I.E., Director-General of the Indian Medical Service.

Ph.D.—Dr. R. Gopal Bhandarkar, M.A., Hon. Ph.D. Gött., Hon. LL.D. Bombay, C.I.E., Sanskritist and Historian; Sir H. H. Risley, B.A., C.S.I., Ethnographer and Anthropologist; Dr. P. Ray, D.Sc. Edin., Professor of Chemistry, Presidency College, Calcutta.

THE Turin Academy of Science has conferred the Bressa Prize of 9,600 lire (£384) on Dr. Ernest Rutherford, Professor of Physics, Victoria University, Manchester.

THE Hulme Trust has enabled Brasenose College, Oxford, to apply £1,000 a year to general University purposes and another £1,000 a year to special objects that will benefit both the University and the College.

THE late Baroness Lingen, widow of Lord Lingen, formerly Secretary to the Committee of Council on Education and Permanent Secretary to the Treasury, bequeathed £2,000 upon trust to found a Lingen Memorial Fund for the study of Latin and Greek in Trinity College, Oxford.

MR. HENRY WILDE, Hon. D.C.L., F.R.S., already a liberal benefactor of Oxford University, has offered £4,000 to found a Lectureship in Natural and Comparative Religion.

THE Oxford University Endowment Fund, which was inaugurated in May last, amounts to over £72,000 (out of £250,000 required). The donations range from £10,000 down to £1 and less.

THE Goldsmiths' Company have offered £10,000 to the Oxford University Appeal Fund for the establishment of a Readership in English Language and Literature, and £10,000 to the University of Cambridge for the establishment of a Readership in Metallurgy.

AN anonymous donor has offered to Cambridge University £300 a year for five years towards the stipend of a new Professor of Biology, who should devote himself to the chief subjects of Charles Darwin's life work. The gift has been accepted.

THE Mercers' Company have granted £525 towards the fund for the incorporation of King's College in the University of London.

THE Drapers' Company have given £50 towards the commercial education expenses and prize funds of the London Chamber of Commerce.

MR. GEORGE HARRISON, retired cotton spinner, Manchester, has left £10,000 to Owens College for scholarships and fellowships.

MRS. LINTON, Shirley, Derbyshire, has presented to the University of Liverpool a valuable herbarium collected by her late husband, the Rev. W. R. Linton, M.A.

Mr. A. F. Warr has contributed to Liverpool University

Library a valuable collection of original and early editions of the works of Cardinal Newman, together with an autograph letter.

\* \* \*

MR. HENRY RUTSON has given a second donation of £1,000 towards a scholarship in memory of his late brother, Mr. John Rutson, in the University of Leeds.

\* \* \*

SIR FREDERICK WILLS has contributed a second £5,000 to the fund for establishing a University of Bristol.

\* \* \*

MRS. MACKIE, Struan, Bearsden, has left £1,000 to Glasgow University, for general purposes.

\* \* \*

MRS. GORDON and Miss Peters have given £4,000 to University College, Dundee, for the erection of a Laboratory of Electrical Engineering, in memory of their late brother, Lord Dean of Guild Peters.

\* \* \*

SIR COWASJEE JEHANGHIR, a Parsee merchant, has given four lakhs of rupees (£26,666) for the promotion of science teaching in Bombay.

—————

A COMBINED examination for 67 entrance Scholarships and prizes. Exhibitions at Pembroke, Gonville and Caius, King's, Jesus, Christ's, St. John's, and Emmanuel Colleges, Cambridge, will be held on December 1 and following days. Candidates to be not more than nineteen years of age on October 1. Application forms and further information from W. S. Hadley, M.A., Pembroke; the Master, Gonville and Caius; W. H. Macaulay, M.A., King's; A. Gray, M.A., Jesus; Rev. J. W. Cartmell, M.A., Christ's; J. R. Tanner, Litt.D., St. John's; the Master, Emmanuel. Forms, &c., to be returned by November 24.

\* \* \*

EMMANUEL COLLEGE, Cambridge, will award an exhibition of £50 for two years to an advanced student at the beginning of October. Apply, with two certificates of character and precise account of career and studies (past and projected), to the Master of Emmanuel by October 1.

\* \* \*

SCHOLARSHIPS, exhibitions, &c., are offered in Classics at Oxford:—December 1, at Exeter, Oriel, Brasenose, and Christ Church; December 8, at University, New, and Corpus Christi; March 16, 1909, at Magdalen.

\* \* \*

BEDFORD COLLEGE FOR WOMEN offers three entrance scholarships in June: (1) the Reid in Arts, £31. 10s. for the first year and £28. 7s. for the second and third years; and (2) and (3) the Arnott and the Pfeiffer in Science, each £48 for three years. Examinations, fourth Wednesday in June. Entry forms, obtainable from the Principal, to be returned by June 1.

\* \* \*

RIPON CLERGY COLLEGE offers exhibitions of £10 to £40, upon testimonials, not upon special examinations. Apply to the Principal.

\* \* \*

THE London College of Music offers 12 open scholarships—4 for Singing, 2 for Pianoforte playing, 2 for Violin playing, 1 for Viola, 1 for Harmony and Counterpoint, 1 for Organ playing, 1 for an Orchestral Instrument—giving free tuition for two years. Competition on or about April 23. Entry forms to be returned by April 16.

THE Drapers' Company offer (1) 3 scholarships, £60 each for two or three years, to girls between 17 and 19; and (2) 2 scholarships, £60 each for two or three years, to boys between 16 and 18. Particulars from the Clerk to the Company, Drapers' Hall, Throgmorton Street, E.C.

\* \* \*

THE proprietors of the *World's Work* offer £100 for "the best letter in each of the series appearing in the March, April, and May numbers"; and other smaller prizes. Also three prizes (5, 3, and 2 guineas) "for the best single letter" (not included in the successful sets).

—————

PROF. J. J. THOMSON, F.R.S., &c., Cavendish Professor of Experimental Physics in the University of Cambridge, has been nominated President of the meeting of the British Association to be held at Winnipeg next year.

\* \* \*

THE following have been elected by the Council of the British Association to be Presidents of Sections at the meeting of the Association to be held in Dublin in September next under the general presidency of Mr. Francis Darwin, F.R.S.:—

Section A (Mathematical and Physical Science), Dr. W. N. Shaw, F.R.S., Director of the Meteorological Office. Section B (Chemistry), Prof. F. S. Kipping, F.R.S., Professor of Chemistry in University College, Nottingham. Section C (Geology), Prof. J. Joly, F.R.S., Professor of Geology and Mineralogy in the University of Dublin. Section D (Zoology), Dr. S. F. Harmer, Superintendent of the University Museum of Zoology, Cambridge. Section E (Geography), Major E. H. Hills, C.M.G. Section F (Economic Science and Statistics), Lord Brassey. Section G (Engineering), Mr. Dugald Clerk, M.Inst.C.E. Section H (Anthropology), Prof. W. Ridgeway, Professor of Archaeology in Cambridge University. Section I (Physiology), Dr. John Scott Haldane, F.R.S., University Reader in Physiology at Oxford. Section K (Botany), Dr. F. F. Blackman, F.R.S., Professor of Botany in the University of Leeds. Section L (Educational Science), Prof. L. C. Miall, formerly Professor of Biology in the University of Leeds.

Invitations to deliver evening discourses during the meeting of the Association at Dublin have been accepted by Prof. H. H. Turner, F.R.S., Savilian Professor of Astronomy at Oxford, who will take as his subject "Halley's Comet"; and Prof. W. M. Davis, of Harvard University, whose lecture will be entitled "The Lessons of the Colorado Cañon."

\* \* \*

THE REV. DR. T. K. CHEYNE, Fellow of Oriel, will shortly resign the Professorship of the Interpretation of Holy Scripture in the University of Oxford.

\* \* \*

SIR HUBERT PARRY has resigned the Professorship of Music in Oxford University.

\* \* \*

MR. BENJAMIN KIDD has been appointed Herbert Spencer Lecturer at Oxford. He will deliver the lecture next term.

\* \* \*

MR. R. H. BIFFEN, M.A., University Lecturer, has been appointed Professor of Agricultural Botany in the University of Cambridge.

\* \* \*

PROF. MARSHALL has decided to retire from the Chair of Political Economy at Cambridge, which he has held since 1885, when he succeeded Prof. Fawcett.

\* \* \*

SIR ERNEST M. SATOW, G.C.M.G., has been appointed Rede's Reader in the University of Cambridge for the present year. He will deliver the Rede lecture on June 13.

MR. ALEXANDER GOW, M.A., B.Sc., formerly Scholar of Gonville and Caius College, Cambridge, Director of Education and Principal of the Technical School, Blackburn (for the past four years), has been appointed Secretary to the Technical College of Science and Technology.

MR. DAVID HERON, M.A., and Miss E. M. Elderton have been reappointed respectively Research Fellow and Research Scholar in the Francis Galton Laboratory for National Eugenics for the year 1908-9.

AT Trinity College, Dublin, Mr. C. F. Bastable, LL.D., Professor of Political Economy, has been appointed Regius Professor of Laws in succession to Dr. Brougham Leech, resigned; and Mr. J. S. Baxter, Reid Professor and deputy for Dr. Leech, has been appointed to the Chair of Civil Law and General Jurisprudence.

AT Leeds University, Dr. Croft has been appointed Lecturer in Gynaecology, in the place of Dr. Hellier, who has been appointed Professor of Obstetrics; Mr. Andrew Hunter, M.B., Demonstrator of Physiology; Mr. R. Veitch Clark, M.B., Honorary Demonstrator in Public Health; Dr. W. G. Smith (Assistant Lecturer in Botany), Lecturer in Agricultural Botany; Mr. A. S. Galt, additional Lecturer in Horticulture; and Mr. P. N. Ure, M.A., Assistant Lecturer in Classics.

MR. D. H. MACGREGOR, M.A. Edin. and Cantab., Fellow of Trinity College, Cambridge, has been appointed Professor of Economics in the University of Leeds, in succession to Prof. Clapham.

ROYAL HOLLOWAY COLLEGE (University of London) requires (1) a Lecturer in Mathematics and (2) an Assistant Lecturer and Demonstrator in Botany, both resident. Apply to the Principal by April 16.

DR. J. C. BRIDGE, M.A., F.S.A., Organist of Chester Cathedral, has been appointed Professor of Music in the University of Durham, in succession to the late Dr. Armes. He is a brother of Sir Frederick Bridge, and was conductor of the Chester Triennial Musical Festivals.

PROF. BOSANQUET will resign the Chair of Moral Philosophy in the University of St. Andrews at the end of the current academical year.

MISS E. N. THOMAS, B.Sc. Lond., Assistant in Botany at University College, has been appointed Lecturer and Head of the Department of Botany, Bedford College for Women.

DR. R. STEWART MACDOUGALL, Lecturer in Biology, Edinburgh and East of Scotland College of Agriculture, has been appointed Lecturer in Botany in Edinburgh.

MR. G. ROBERTSON WATT, B.A. Cantab., Lecturer in Greek History and Assistant in Greek, Aberdeen University, has been appointed Professor of English and Philosophy in the Presidency College, Calcutta.

MR. WALTER W. REED, B.Sc., Isaac Roberts Scholar of University College, Bangor, has been appointed Assistant Lecturer and Demonstrator in Chemistry at the Technical College, Huddersfield.

MR. WILLIAM DAWSON, M.A., B.Sc., Carnegie Fellow, has been appointed Lecturer in Forestry at the Aberdeen and North of Scotland College of Agriculture.

MR. A. H. HILL, Head Master of the L.C.C. Mile End Pupil-Teachers' Centre, has been appointed an Assistant Inspector under the London Education Committee.

MR. T. A. EAVES has been appointed Inspector of Elementary Schools under the Newport (Mon.) Education Committee.

THE REV. E. J. W. HOUGHTON, M.A., Head Master of St. Edmund's (Clergy Orphan) School, Canterbury, has been appointed Head Master of Rossall School.

MISS JULIAN M. BOYS, M.A., Assistant Mistress, Princess Helena College, Ealing, has been appointed Head Mistress of St. Margaret's School, Bushey (Clergy Orphan Corporation).

MISS E. M. JULIAN has been appointed Principal of the Avery Hill Training College (L.C.C.).

THE REV. E. T. LEA, M.A., House Master at Cranleigh School, has been appointed Head Master of Steyning Grammar School, in succession to the Rev. A. Harre.

MR. J. MOORE, B.A. Lamp., has been appointed Head Master of the Bishop's High School, Poona.

THE University of London requires one Examinership. Examiner in each of the following Matriculation subjects:—English, Mathematics, Latin, Greek, French, German, Elementary Physics, Ancient History, Modern History, Logic, Physical and General Geography, Geometrical and Mechanical Drawing, Elementary Chemistry, and Elementary Botany. Particulars from the Principal. Applications to be lodged by April 15.

**Literary Items.** THE Oxford University Press is issuing the Greek versions of "The Testaments of the Twelve Patriarchs," edited from nine MSS., together with the variants of the Armenian and Slavonic versions and some Hebrew fragments, by Dr. R. H. Charles.

THE Spring List of the Oxford University Press, while containing important works in language, history, and science, is specially strong in English literature, original and critical. Apart from school books, we note particularly "The Shakespeare Apocrypha"—14 plays at some time attributed to Shakespeare—edited by C. F. Tucker Brooke.

MESSRS. LONGMAN are publishing Stubbs's "Germany in the Early Middle Ages, 476-1250," edited by Mr. Arthur Hassall.

MR. FISHER UNWIN has just added to the "Story of the Nations" series a volume on "The Roman Empire, B.C. 29 to A.D. 476," by Mr. H. Stuart Jones, M.A., Fellow of Trinity College, Oxford.

MR. J. LEWIS PATON contributes a piquant article on "The Need of Actuality in Teaching" to *Cassell's Magazine* for April.

*Modern Language Teaching* (March) gives a very interesting "Report on the condition of Modern (Foreign) Language Instruction in Secondary Schools," and a discussion on "The Place of Translation," on the basis of a paper by Mr. F. B. Kirkman.

\* \* \*

UNDER the title "Travel the Teacher," *T.P.'s Weekly* has started a series of articles (inaugurated by Mr. J. H. Yoxall) outlining the educational opportunities and enjoyments open to readers that may be visiting, on holiday, various countries, districts, or towns.

\* \* \*

MESSRS. A. & C. BLACK announce a work of great sociological interest, "Kafir Socialism," by Mr. Dudley Kidd, who has known the Kafirs under their native conditions.

—•••—

SIR EDWARD BUSK, M.A., LL.B., and Mr. General. C. A. Russell, B.A., LL.B., K.C., have been nominated to represent the Senate of the University of London, and Sir Thomas Raleigh, K.C.S.I., K.C., and Mr. W. English Harrison, K.C., to represent King's College, on the Commission to be appointed under the King's College, London (Transfer), Act. The fifth Commissioner, who will be Chairman, is to be appointed by His Majesty in Council.

\* \* \*

LORD ROSEBERY has been nominated for the Chancellorship of Glasgow University, and apparently will not be opposed.

The candidates for the Lord Rectorship of Glasgow University are Sir Henry Campbell-Bannerman (L.), Lord Curzon (C.), and Mr. Keir Hardie (Socialist).

The candidates for the Lord Rectorship of Edinburgh University are Mr. Winston Churchill (L.) and Mr. Wyndham (C.).

The candidates for the Lord Rectorship of Aberdeen University are Mr. Asquith (L.) and Lord Milner (C.).

\* \* \*

BEDFORD COLLEGE FOR WOMEN (York Place, Baker Street, W.) has taken additional premises, to which the Department for Secondary Training will be moved at the beginning of Easter Term.

\* \* \*

It is proposed to erect in London a monument in memory of Shakespeare. The Committee aspire to raise £200,000. Prof. Gollancz is honorary secretary.

\* \* \*

MR. ERIC WILLIAMS gave a highly successful "Patriotic Recital" at Margate on March 19, when some 500 pupils of the local schools and colleges took part in the choruses; and he is open to repeat it anywhere in the kingdom for the same object—namely, to increase the Veterans' Relief Fund. The object is in the highest degree praiseworthy.

\* \* \*

PROF. LUDWIG SCHRÖDER, who had for more than forty years directed and successfully developed the famous People's High School at Askov in South Jutland, died on February 7, just over seventy-two years of age.

\* \* \*

THE French Ministry of Public Instruction have recently decided that for the future the sum of £16, previously payable by English Répétitrices in French Ecoles Normales, shall no longer be demanded. English Répétitrices in these institutions will henceforward be appointed "au pair."

\* \* \*

A FRANCO-CHINESE University is being established at Hanoi. The French Government hopes by means of it to raise the standard of education in China, or at least in the south of China.

## SCIENCE IN CORRELATION WITH GEOGRAPHY AND MATHEMATICS.

At the Evening Meeting of the members of the College of Preceptors on Wednesday, March 18, Mr. W. C. BROWN, M.A., in the chair, Dr. T. PERCY NUNN, M.A., D.Sc., read the following paper:—

If an attempt were made to estimate the influence of pedagogical theory upon pedagogical practice during the last century, there would be little difficulty, I think, in establishing at least this clear result—that those in whose hands the instruction of boys and girls actually lies recognize that the nature and order of that instruction must wait upon the psychological development of the pupil. Even the Head Masters' Conference admits, at least in principle, that the curriculum and method of teaching at eleven must be determined in the first place by the intellectual characteristics and requirements of the boy of eleven and only in the second place by the intellectual characteristics and requirements of the boy of sixteen.

### "STUDY THE CHILD"—ONLY A HALF-TRUTH.

It is one of my objects to-night to suggest that this all-important principle has, when properly regarded, two sides, of which one alone has hitherto received an adequate amount of attention. This side is represented in the recommendation that the young teacher should "study the child rather than the subject"—study him, that is, so as to master his ways of thought, his modes of intellectual assimilation, at each stage of his development. I wish to suggest that the view expressed in this maxim, valuable as it is, contains only half the truth and stands, therefore, in need of correction.

### THE CHILD'S MIND.

It appears to me to assume that we have, on the one hand, a world of "facts" to be known—eternal and immutable like the "ideas" of Plato—and on the other hand a "mind" which is an instrument fashioned for the purpose of "knowing" these facts. It attaches great weight to the recognition that the instrument changes in character as the individual advances from infancy to childhood, from childhood to boyhood, from boyhood to manhood; but it thinks of the mind and its changes precisely as it would think of the development of a physical organ. Just as growth in strength and skill is the direct result and expression of the growth and organization of the muscular system, so the changes in amount and character of the intellectual performances of the boy are to be regarded as the direct result and expression of the growth and organization of his mind. We should not, in view of the great usefulness of this conception, allow ourselves to forget that it is, strictly, not a *statement* of facts, but an *interpretation* of facts. In the case of the physical organ, both organ and function are indubitable facts. The boy's biceps is there, even though it is not functioning in connexion with any of the uses of peace or war. But who has ever demonstrated the existence of a "mind" apart from the functions which we distinguish as mental—a mind which is neither feeling nor knowing nor willing? Surely, a "mind" conceived apart from mental functions is logically on the same level as "matter" stripped of its "properties"—it is an abstraction which we may lawfully hypostatize for certain purposes, but must not, when hypostatized, confound with a *fact*.\*

If you admit the force of this argument, you will recognize that the "nature" of a boy's mind at any epoch consists simply in the details of its "contents" and their order of succession, and that the development of his mind is simply the history of the succession of these contents. Thus to study the mind of a child is to make oneself acquainted, as far as is possible, with the details of these contents, their modes of sequence and recurrence.—using the term "contents" in the widest sense to cover every type of conscious element. Now, while it is true that the development of the minds of a group of children may show in detail an almost infinite variety, yet it is also true that their differences are not so great that they may not be regarded as merely deviations from a norm typical at least of the community to which the children belong. In other words, in the case of children brought up under substantially identical conditions their mental development will take over much of its cross-section

\* It may be well to add that I am disputing the existence neither of a "spiritual principle" nor of a real world, but only of the "mind" as a kind of curtain between the two.

a substantially identical course. This is obviously the circumstance that makes class-teaching possible. It is only another way of making the same statement to say that the curriculum through which a boy has passed has been at the various stages of his career a definite part of his mind. But, to realize the full value of this statement, we must recognize that a programme of the instruction which a boy has received, however detailed it may be, implies much more of the content that goes to make his mind than it actually records. The programme *records* merely the substantive "objects of thought" with which the boy has had commerce from day to day and from term to term: it *implies*, in addition, an almost equally definite contexture of impulsive and emotional elements into which the substantive intellectual elements were interwoven during the actual process of apprehension. Moreover, the relation between the intellectual nuclei and the interstitial impulsive and emotional material is not the merely external relation that the word "interwoven" might suggest: it is essentially a *functional* relation, as close and indispensable as the relation of one organ of the body to another. Thus the programme of instruction in any "subject" of the curriculum may not inaptly be compared with the skeleton of an organism which may indeed be preserved and exhibited for an indefinite time, but is really meaningless apart from the warm pulsating tissues whose life it supported and with whose growth it grew.

In the last sentence I have not only used for the first time the word "subject" in its technical sense; I have also indicated the way in which, from this point of view, a subject of the curriculum must be regarded. It is not sufficient to say that the boy's mind is a growing tissue of conscious elements—impulsive, emotional, intellectual—nor even to correct the account by adding that it is a whole, a unity, not merely a collection of contents. We must, besides this, recognize the fact that as the contents grow in number and variety they tend to consolidate into structural systems having each a more or less clearly marked individuality and enjoying a more or less complete autonomy within the empire of the mind as a whole. Among these systems will be some—such as the boy's "hobbies"—which, being relatively deficient in intellectual elements, may take a form almost entirely peculiar to himself and hardly capable of being conceived as existing apart from him. On the other hand, there will be others which are relatively so rich in intellectual elements that we can exhibit the latter in the form of a detailed programme—as it were the continuously connected and articulated skeleton of the mental structure. These systems will be the great "subjects" of the curriculum—mathematics, history, religion, and so forth. The predominance in these of intellectual contents which may, at the same time, be present in an indefinite number of other "minds" has led to the mistaken belief that their individuality consists simply in the nature and relations of these elements and to the ignoring of the impulsive and emotional contents which the former imply as necessarily as the skeleton implies the flesh and blood. Thus we have the hypostasis of a "subject" conceived as having an individuality of its own apart from the "minds" in which it appears as a psychological system, answering to the hypostasis of a "mind" having an individuality of its own apart from its intellectual contents. Both these abstractions are legitimate or useful on special occasions; they become equally dangerous on others if we allow ourselves to forget that they are only abstractions.

#### INTELLECTUAL DEVELOPMENT—RACIAL AND INDIVIDUAL.

We are now, I think, in a position where we can see in what lies the value of the principle—so often applied as a maxim of pedagogical method—that the intellectual development of the individual repeats that of the race. This famous principle, which many people accept somewhat hastily upon the strength of a rather doubtful biological analogy, may easily lead to error if used incautiously. It seems obvious that no profitable comparison can be made between the *whole* contents of the mind of a modern boy of any age and that of an Englishman of the fourteenth century. The differences would be, on the whole, much more important than the resemblances: they would show the former still a boy and the latter a man. But, if we confine our attention to one of the great systems of which we spoke as individualized about a strong and well defined intellectual framework, the applicability of the principle appears equally evident. Thus the great, strongly individualized system which constitutes "modern mathematics" was represented in the mind of the Englishman of the fourteenth century by a group of relatively unsystematized impulses and trains of thought motivated by

these—a group which, in respect of the character both of the impulses and of the intellectual content, and again in respect of their lack of co-ordination and system, may quite profitably be compared with the mathematical knowledge and the connected impulses in the mind of a modern child just beginning the subject at school. Moreover, since the mathematical system has had a continuous development in the minds of thinkers of successive generations from its sporadic beginnings in early times to the highly consolidated structure of to-day, and since this system arises in our pupils from similar centres and moves towards the same goal, it seems highly probable that the historical development of the subject marks out for us the steps by which the mathematical system may most naturally move towards the form which characterizes it in the minds of adult mathematicians to-day. There are certain qualifications of this doctrine which good sense will always make without the stimulus of theory. Just as the physical system does not always find the best path of development and may show, in its later stages, the persistent effects of earlier morbid states, so the development of the great intellectual systems has not always been completely healthy, and in its later stages has exhibited disfigurements and weaknesses which we should not allow our children to incur. But the teacher who consults the history of a subject for guidance in developing it in school must not forget that the stages in its history present him with those parts only of the developing system that are capable of preservation. They are like the palaeontological record of an animal race: they are merely the "hard parts" of the successive forms in which the continuous life of the *phylum* has displayed itself. From these fossils the teacher must reconstruct, by criticism, the complete system at each step of its development, supplying the context of impulses and emotions for which the character of the intellectual structure as a rule yields sufficient evidence.

#### THE SCIENTIFIC SYSTEM: THREE MAIN STAGES.

It would be impossible, in the compass of one lecture, to apply this reconstructive criticism to any of the great systems which have terminated in the modern sciences. Standing in this place a few years ago, I endeavoured to show how inadequate for the purposes of the teacher is the view that would regard the sciences merely as great collections of "truths," and sought to indicate the necessity of recognizing them as *structures* bearing throughout the marks of human activity. In other places I have since tried to indicate the characteristics of the scientific systems at the principal stages in their development, and ask your permission to assume the results of these studies here.

Three main stages, or levels, may be established in the development of the scientific system. These are distinguished from one another by the nature of the non-intellectual elements present in them and by their differing degrees of systematization. The lowest stage is that of "Nature study"—using the term to connote a relatively unsystematized body of inquiries which are directed indifferently towards the heaven, the earth, and the waters under the earth, wherever and whenever wonder calls and naive curiosity leads the way. The highest stage is that which is at once most completely systematized and most predominantly intellectual, when the impulses and emotions that support and direct thought urge it only towards its own systematic completeness. This is the position of the modern physicist like Clark Maxwell, the modern biologist like Darwin, the modern mathematician like Cayley.

Between these is the stage to which our attention is to be confined to-night. Inquiries which were at first prompted by wonder, by fear, or by curiosity generally pass into intellectual efforts directed to the establishment of control over the source of wonder or alarm. The primitive astronomer ceases to study the phenomena of the eclipse with the curiosity that springs from terror; he no longer contents himself with reflecting that he cannot bind the sweet influences of Pleiades or loosen the bands of Orion. He penetrates the secret of the eclipses, reducing their recurrences to law and order, and thus is, in a measure, forearmed, since forewarned, against their baleful influences; he makes the stars wait upon his needs and divide for him his times and his seasons. And so, wherever the primitive motives of wonder, delight, fear, and curiosity have led inquiry, the less primitive motive has followed that continues and widens the inquiry for the sake of ministering to the inquirer's needs.

#### MIDDLE STAGE—SCIENCE CURRICULUM.

The character of the portion of the curriculum in science that answers to this stage in the evolution of the sciences seems

perfectly clear. It must consist in the study of *problems* whose solution is a matter of practical interest and requires the application of instruments and methods of exact determination. That is, the problems will, in general, involve quantitative and often mathematical treatment, while their practical character will arise from their intimate connexion with life and industry—either, out of doors, the tillage of the land and of the sea, or, indoors, the labours and operations of the workshop, the kitchen, the laundry.

The very fact that we are conceiving this work as a section of a developing curriculum lying between the specialized and highly systematic pursuit of the special sciences above, and the general and largely unsystematic study of the more striking aspects of Nature below, implies a gradual transition in its own character from the latter to the former. As the boy approaches the age at which his studies in science should assume the systematic form—say at sixteen—the problems to which his attention is directed will become so closely connected with one another that they will be woven into a continuous argument. When this is the case it is natural and easy to effect the shifting of emphasis that causes the pursuit and completion of the argument to become itself the object of the work. It will, I think, be recognized that this description holds good of the first year or two of the study of chemistry or of mechanics. It follows, therefore, that these studies should find their place at the end of the period we have in view. On the other hand, in the earlier part of the period—say from the age of ten or eleven to the age of fourteen—the problems will have rather the sporadic and disconnected character of the Nature-study period. But we are dealing with an age at which that organization of intellectual effort which is one of the chief aims of education has, having regard to the mind of the pupil as a whole, already developed to a considerable degree. We cannot, therefore, be content with a succession of problems isolated from any continuous context and accepted for study merely on their own merits as affording suitable opportunities for acquiring what is sometimes rather vaguely called “scientific method.” (Parenthetically I remark that this practice appears to me to be a somewhat serious weakness in many existing schemes of work.) We must, it would seem, arrange that our problems should be episodes, as it were, in the development of some other subject, presenting a continuous argument, until the time is reached, as I have before indicated, at which they themselves merge into a similarly continuous argument.

#### GEOGRAPHY AND MATHEMATICS.

Little difficulty can be experienced in selecting subjects suitable for affording this external support to the development of the science curriculum. Both geography and mathematics have reached, by the age of eleven, a stage of development at which their individuality is strongly marked. Moreover, both have a connexion with the scientific interest that is close, if not inevitable. They are, then, the subjects with which, in the earlier years of this intermediate period, the science instruction may most usefully be correlated. But the relations of this instruction to the two great subjects I have named must be conceived somewhat differently, and will repay a brief examination.

The subjects of the curriculum may be usefully regarded as falling into two groups: “substantive” subjects, pursued for their own sake, and “instrumental” subjects, cultivated rather for the sake of their applications within the boundaries of other subjects. So long as geography was studied in schools merely because it was necessary for the comprehension of history, it was instrumental, but, now that it is recognized as having an ideal and an individuality of its own, it has come to take a place with history and literature among the subjects indisputably of substantive rank. The recent history of mathematics as a school subject has exhibited, curiously, a movement in the opposite direction. Owing largely to the admirable efforts of Prof. Perry and his disciples, it is tending more and more to become recognized as instrumental and to abandon pretensions which entailed so great a strain upon those who were expected to support them.

Geography, conceived as a substantive subject, having for its object the study of “the surface of the earth as the home of man,” usually undertakes a careful survey of the home region, so that the pupil may acquire a first-hand acquaintance with geographical ideas and skill in interpreting the technical symbolism in which geographical fact is expressed. This part of its aim cannot be achieved without consideration of the many aspects of the home region which fall within the special provinces of the science. Thus the problem of exactly determining the characteristics of the home region with regard to these aspects

contains the points of departure of a number of important scientific “episodes.”

School mathematics, we have said, is to be regarded not as an end, but as a means, an instrument of precise analysis and exact description. But it is an instrument of an exceptional character, which soon passes out of the stage in which it is pursued episodically into the stage in which its problems—regarded as the problems of fashioning an effective apparatus of analysis and description—merge, like the problems of elementary mechanics and chemistry, into a doctrine having a certain continuity of argument and therefore a certain capability of self-subsistence.

#### TRADITION IN MATHEMATICAL PROBLEMS.

In relation to this subject the functions of such problems as we propose to correlate with it will be to act as *motives* for the fashioning and elaboration of the mathematical instruments of investigation. The experienced mathematical teacher has always pursued some such course. He has not actually followed the unfortunate suggestion of his text-book, which would urge him to introduce his new mathematical method, as it were, out of the void and *then* to show its useful applicability to concrete problems. He has taken the better course of raising some interesting concrete problem and then introducing his mathematical method as a means of dealing with it. Unhappily, tradition has limited his development of this sounder method in two ways. In the first place, it has forced him to confine himself largely to the problems of commercial life—interesting enough to the adults for whom the first treatises on arithmetic were composed, since for those adults these problems were matters of actual urgency, but having only a remote connexion with the interests of children at school. It is, perhaps, only when one has turned over the leaves of some of these early text-books—has noted, for example, that the supposititious pupil for whom Tonstall's *De arte Supputandi* (1522) is written is a mature Oxford student who is commencing the study of compound addition in order that he may defend himself against possible fraud on the part of his landlady—that one realizes how harmfully this unlucky tradition may have affected our curriculum in arithmetic. In the second place, tradition has decreed that in a mathematics lesson there shall be no accessories to paper and pen except the blackboard, the chalk, and the duster. It follows that, when a motive to mathematical enterprise is sought in other sources than in hypothetical commercial transactions, the teacher is thrown back upon a miscellaneous variety of topics—the competitive performances of pipes and cisterns, the feats of coincidence of clock-hands, and so forth—topics whose content is of such slight value that it hardly justifies the elaboration of intellectual apparatus to deal with it. It also follows, too often, that boys will work upon hypothetical data in the classroom and upon data of the same kind actually determined by themselves in the laboratory under such conditions that they are neither helped by a perception of the identity of the problems involved nor hindered by a perception of the dissimilarity of the methods by which they have been taught to deal with them. The mode of correlation which we are discussing proposes to avoid these disadvantages by using, as motives for the invention of the ordinary apparatus of mathematics, problems that have a content of positive value and interest to the boy, that involve useful physical manipulation and have a certain unity of character which enables them to develop later into a continuous physical argument. I propose now to illustrate briefly the application of these principles in the school curriculum—first in geography, then in mathematics. (It may be convenient to state that, in the main, I am describing details of the science syllabus of an elementary school associated with the work of the London Day Training College.)

#### GEOGRAPHICAL PROBLEMS—NATURE-STUDY PERIOD.

The problems arising in the geographical context that call for scientific treatment may be regarded as the development of the Nature-study observations of sky and weather. The sky observations will be devoted at this earliest stage to the contemplation of the sun and the moon simply as beautiful objects whose more obvious performances are full of interest, while to a more careful scrutiny they promise delightful surprises. That the simple and obvious facts of the behaviour of the sun and moon are in reality very little regarded and only imperfectly known has been borne in upon me by the following painful discoveries. (1) Of a large class of students on the eve of graduating the majority hold the belief that the sun rises daily at the eastern point of the horizon, sets nightly at the western point, and at noon stands directly

overhead. (2) A class, composed for the greater part of graduates, hesitated to commit themselves to any definite opinion when asked whether the waxing and waning crescents of the moon were turned the same or different ways. It seems evident that these persons, whose education in the ordinary sense was much above the average, had very little knowledge of the actual sun and moon, but bore in their minds only the memory of the insipid *simulacra* of the text-book. To avoid this distressing state of things, the children are taught to note and picture the phases of the moon on her monthly journey through the sky just as they note and picture the phases of the plants they rear. They approach the study of the sun by watching the shadow of a vertical metre rule which it casts upon the laboratory floor. The delighted surprise which greets the first perception of the rapid shifting of the shadow is a sufficient justification for placing this observation in the Nature-study stage. For the first time the restless movement of the sun is brought home to the child's mind as a fact infinitely more striking and wonderful than any deduction that "it must have moved" based upon observations of its position in the morning and evening. The impression is deepened by a simple class experiment which I do not remember to have seen described, although doubtless many teachers have invented it independently. The optical lantern is placed in a southern window, and the prism or mirror adjusted so that a clear image of the sun's disc is thrown on a screen in front of the class—for example, on a blackboard. The movement of the sun can now easily be traced, a child being called out every few minutes to outline the disc with a chalk circle. At the end of a half-hour's lesson these circles spread in my own laboratory over a distance of more than a yard. May I add that a few weeks ago one of His Majesty's senior inspectors, a couple of colleagues, and myself watched this moving disc for a full half hour with a delight which we found it impossible to disguise.

To return to our shadow. Two boys in rotation are told off every sunny day to watch the shadow about noon, to determine its direction and its length when it is shortest, and to note the time of this event by the clock. The shadow changes in length very slowly at its minimum, so that the determination of direction and time are only approximate. They are sufficiently accurate, however, to bring out the facts that when the shadow is shortest its direction is always practically the same, and that the time of shortest shadow varies from about a quarter to twelve at one season of the year to a quarter past twelve at another. We now have facts that call for a terminology, and the names, "south" and "noon" are appropriately introduced. Meanwhile the length of the shadow is recorded about once a week in a simple graph, which is practically a series of pictures of the shadow on the floor not too much reduced in size. This graph, built up gradually during the year, is a treasure which has many uses. At the epoch under consideration it serves as a striking record of the sun's annual variation in noonday height—a fact wonderful and interesting in itself. Later in the course, it is found to contain the secret of the procession of the seasons; while much later still the same graph, reduced to degrees both in its vertical and its horizontal scale, is bent round into a complete circle and becomes a model which can be interpreted as showing the inclination of the earth's axis to the plane of the ecliptic.

These simple observations on the noonday shadow fall into the Nature-study period: we see their development into the type of scientific inquiry with which we are specially concerned when in the next year—say at age ten—we endeavour to solve the two closely connected practical problems of using sun-shadows to determine the exact south direction and the time of day. I confine my remarks to the latter. The first year's work has taught us that the sun is not so constant to his time as the poet credits him with being, and we have compiled a rough table of what the astronomer calls the "equation of time," which enables us to use with understanding the more exact figures given in the invaluable "Whitaker's Almanack." A simple sundial is now set up with a vertical style, and is graduated empirically by noting the position of the shadow at certain definite hours—allowance being made for the equation of time. The task of checking the graduations is allotted, as before, to boys in rotation, and in the course of a couple of terms the whole class will have become convinced that the sundial with upright style is not a success. Thus the ten o'clock shadow moves in London over a space of about 22 degrees between winter and summer. We are now naturally led to interpret the sloping style of the sundial in the park as an attempt to overcome the difficulty we have discovered. We fit our sundial with a style having the same inclination to

the horizontal, and are at last rewarded with a trustworthy timekeeper.

But the uses of the sundial are not yet exhausted. It is of service in the solution of another practical geographical problem—the problem of fixing the position of a point on the earth's surface by easily determinable co-ordinates. Time difference, or "longitude," is one. I pass over this, except to commend to your notice Prof. R. A. Gregory's useful little "universal clock," which I use in a somewhat simplified form. The other is supplied by the characteristics of the sundial.

The class learns that at places distant from one another on a north and south line—such as the valley of the Nile—the inclination of the style must be varied, but that no such variation is necessary in the case of places on the same east and west line. Thus the number of degrees in the elevation of a correct sundial may be taken as the second co-ordinate fixing the position of the place where the dial is set up. When subsequently it is discovered that the direction of the style is also the direction of the pole star, about which the sky appears to revolve, we have all the data necessary to introduce effectively the accepted theory of the earth's rotation, and the ordinary definition of "latitude."

The great use of the moon—after the Nature-study period has been left behind—is in facilitating the interpretation of the more important behaviour of the sun, which we ascribe to the annual revolution of the earth. Very casual observation of the moon reveals in a day or two its extremely rapid movement among the stars, and establishes roughly the period of that movement. It is not difficult to adjust the pendulum of an ordinary clock so that it shall "keep time" roughly with the moon, just as the normal clock keeps time with the sun. I am at present engaged, with this end in view, in corrupting the integrity of a clock belonging to the London County Council. Such a "moon clock" will, of course, show twelve o'clock at about the time when the moon is south. Compared with the ordinary clock, it must lose about forty-eight minutes a day. Its use is that we can state that by moon time a given star—say Venus or Jupiter, which are competing so splendidly just now for the throne of the evening sky—is in a given place at constantly changing hours during the month, returning to the same place at the same time only after the completion of a complete lunar cycle. Moreover, this observation is clearly only another way of stating that the moon is moving daily among the stars. Fortified by these observations, it becomes easy to reach a convincing interpretation of the observations—spread over many months—of the varying positions at the same hour at night of the Plough and Cassiopeia, and of the successive appearances of the great constellations and single stars.

#### GEOGRAPHICAL PROBLEMS—LATER DEVELOPMENTS.

The problems that arise in succession to the simple weather observations of the Nature-study period must be treated very briefly. These early observations consist of a record, pictorial rather than graphical, of sunshine, rain, and cloud from day to day. Later, when the conventional ideas of direction have been learnt, notes on the direction and character of the winds are added. The work of the second period now begins, for we have the definite practical problem of finding a trustworthy method of determining and recording that "real" warmth or coldness of the day which we distinguish under the name "temperature" from the often conflicting and varying deliverances of our senses. The solution of this problem is, of course, the thermometer. The further problems of satisfactory construction and graduation of this instrument afford material for much practical work. Subsequently it is used to record the air temperature from day to day, and to determine the conditions of phenomena such as the freezing of water, which are of obvious geographical importance. It is easy to see that the study of the behaviour of heated bodies thus begun has sufficient intrinsic interest to justify elaboration without special reference to the geographical argument. Thus, in later years, our syllabus contains problems on the exact determination of the expansion of liquids and metals, on their freezing and melting points, and so forth. One important remark may be inserted here. These extended investigations carry inquiry only so far as the notion of temperature—regarded as a definite objective state of a body with which other states are correlated—affords sufficient guidance. When the notion of "heat" as a cause of temperature changes is invoked, we are, I think, passing out of the intermediate, utilitarian stage of our teaching into the final or systematic stage. Such work should therefore be postponed until the close of the school course. But, before this point has been reached,

many other practical problems will have arisen which comply with our original condition that they shall arise out of the geographical argument and be ancillary to its development, even though they may, owing to their intrinsic interest, be pursued further than the needs of that argument actually demand. Such problems will be those connected with the determination of the quantity of moisture in the air—problems which will start a line of investigation passing, by way of the simple seaweed or whipcord hygrometer, to the determination of dew-point, the wet and dry bulb thermometer, the maximum pressure of saturated vapours, and the relations between pressure and boiling point. The one remaining instrument of analysis of conditions that are relevant to the geographical argument—the barometer—is best taken in connexion with the problems correlated with mathematics.

#### MATHEMATICAL PROBLEMS—WEIGHING AND MEASURING.

To these problems we now turn. I will remind you that we viewed school mathematics as an instrument, but an instrument the very fashioning of which is a process that has the highest disciplinary value. Our problems must, then, not only afford adequate motives for the search for mathematical methods: they must, in addition, be adequate to prompt and stimulate the development of a relatively complete mathematical technique. The history of mathematics will aid us, for its progress is marked almost everywhere by the same constantly recurring rhythm. First there is the problem with which existing mathematical methods are insufficient to cope, so that it becomes a motive for the search for a new method. Then comes a period of technical development, a period during which the new machinery is simplified and perfected; finally the perfected apparatus finds an application over an area far wider than that of the special problems from which it arose and becomes itself a potent instrument of investigation. I venture to suggest respectfully that much admirable work which is being done in the direction I am describing is rendered imperfect by the neglect of this technical aspect of mathematics—an aspect which appears to me to be absolutely essential to a correct conception of mathematics as an instrument of analysis and investigation.

In the earlier stages of the syllabus which we are following more or less closely throughout, actual weighing and measuring in English measures is made the starting point of the arithmetical process up to and including a simple non-systematic treatment—"intuitional" as opposed to "rational"—of common fractions. In connexion with the determination of rectangular areas we find an opportunity, in the first place, of introducing certain important geometrical ideas—which we may regard here as, in the main, attempts to organize existing geometrical experiences. In the second place, this particular problem affords an excellent means of effecting the extension of the notion of multiplication which occurs when we proceed to multiply by a fraction. It is amazing to note how many of our leading textbooks slur over this most important theoretical point without reminding even the teacher of its existence. The number of square inches in the area of a rectangle  $5\frac{3}{4}$  inches by 4 inches is easily seen to be four times  $5\frac{3}{4}$ . The area of another rectangle  $5\frac{3}{4}$  inches by  $\frac{1}{2}$  inch is as easily admitted to be one half of 5 square inches. It follows that the area of a rectangle  $5\frac{3}{4}$  inches by  $4\frac{1}{2}$  inches must be the sum of these two. This area is, in square inches, four times  $5\frac{3}{4}$  plus one half of  $5\frac{3}{4}$ . Since, however, the result of this more complicated operation is continuous with the simpler one—namely, the prediction of the number of square inches in an area—and since, in simple cases, the operation was one of multiplication, there is a great gain from the point of view of technique in extending our original notion of multiplication to cover this more complicated performance, and to symbolize it in the form  $5\frac{3}{4} \times 4\frac{1}{2}$ . Subsequently, this technical reduction to one operation of what were originally two operations is seen to hold good in other cases.

#### METRIC SYSTEM—PHYSICAL MANIPULATIONS.

But the more typical problems arise at a somewhat later stage, when we enter upon the study of the metric system and consider it in connexion with work which is generally regarded as physics and is confined to the laboratory. It is important to define our attitude here. The problems of determining weight and volume, and hence of density and specific gravity, are not regarded as physical problems to which elementary mathematics can be applied. They are regarded as mathematics itself in the same sense as the pipe-and-cistern problem is regarded as mathematics.

It follows that physical manipulations must be admitted into the mathematical lesson—though, of course, the bulk of the

lessons will still be reserved for practice and the necessary elaboration of technique. This implies that the lessons in which manipulations are admitted must take place in a room furnished for the purpose. No elaborate fittings are necessary. A low and strong teak table, 6 feet long, 22 inches wide, affords excellent accommodation for two boys with all the necessary apparatus, and the class may face the teacher in the usual way. Inexpensive, and therefore movable, balances are as good as the case demands, and Mr. Cusson's excellent apparatus makes a wide range of manipulations possible. If a criterion be required to decide upon the character of the problems to be considered as belonging to the mathematical syllabus, I suggest that there are two—one practical, the other theoretical. Many teachers who have used this form of work prefer not to admit water, but confine the manipulations to solids. In my own case I have not found it necessary nor desirable to observe that limitation, but I am fortunate in having a supply of water and sinks close at hand. The theoretical limit seems to be of more importance. This work has a definite aim, not to afford an application of mathematics, but to be mathematics—that is, to supply adequate motives for the invention and elaboration of mathematical methods. Consequently there must be no interest present that would come into dangerous competition with the mathematical interest. In the case of such investigations as Archimedes' principle, experiments on liquid pressure leading up to the theory of the barometer, experiments with the ballistic balance, it appears to me that this condition is lacking. The interest in such investigation is primarily physical and not mathematical. On the other hand, determination of volume and density involves no physical hypothesis—they are problems merely of description.

This section of the work will begin, then, with the use of the physical balance and the metric system of weights. At first they are taught by their denominational names—gram, decigram, kilogram, &c. When the relations between these are well known the decimal point is introduced simply as a convenient notation rendered possible by the peculiar numerical relations of the denominations. The notion that the decimal places may have an abstract fractional significance only arises when, having applied the notation to grams and metres and their multiples and subdivisions, it occurs to us to extend it deliberately to express tenths and hundredths of an inch and other units. Meanwhile the rules for the manipulation of quantities expressed in the decimal notation have been arrived at in connexion with simple problems in weighing and measuring which call for them. We have learnt to handle decimals, to add them, to subtract them, to multiply and divide them by whole numbers before their fractional significance has received any attention. It is interesting and important to note that division at this stage involves approximation and a reference to the degree of accuracy verifiable by the instruments employed—a feature which is not only necessary under circumstances, but is also positively desirable.

The fractional aspect of the notation comes, as has been stated, with its extension to the inch. At the same time, we revert to the determination of areas, and, in connexion with the problem of determining the area of the rectangle, elaborate our technical rules for the multiplication of decimal fractions—using a well known modern form that leads naturally to approximation at a later stage. Area problems allow us to introduce also the useful practice of employing decimals to express a quotient or ratio to any required degree of accuracy. The boys cut out cardboard maps—say of Britain and Ireland—and weigh them in order to determine the proportion of their areas. The ratios will be expressed as vulgar fractions. It then becomes obvious that the vulgar fraction is a very unsuitable means of indicating how far the various results of the class agree and how far they are discordant with one another, and the moment is ripe to suggest the convenience of "expanding" the fractions into tenths, hundredths, thousandths, &c., with a view to convenience of comparison. I hope that you will agree that this mode of procedure is preferable to the academic method which proposes the problem of "converting the given vulgar fractions into decimals" without assigning any motive for that operation. Incidentally I would ask you to notice that the notion of degree of approximation is again prominent here and again demands from the boy something more than mechanical obedience to a rule. The fraction that "comes out" is not, on this plan, the rule, and the fraction which does not merely a troublesome exception for whose treatment special instruction must be obtained from the master. The number of places to be obtained in each case depends upon some definite object to be attained and can be decided, with thought, by the boy himself.

## LATER DEVELOPMENTS.

It will be unnecessary to follow any further the development of the course in detail. The study of volume succeeds the study of area. Symbolic generalization of arithmetical procedure is now useful, so that the beginnings of algebra are added to arithmetic and geometry. Volume and weight combine to yield the notions of density and specific gravity. The development of the latter topic leads straight to Archimedes' principle and so to a series of investigations which, we have said, are no longer to be considered as essentially mathematical. They are pursued in the science lesson as such, and, since they lead up to the theory of the barometer, constitute a useful link between the work allied to mathematics and the work allied to geography.

The next stage—at about thirteen years of age—continues the work already indicated and adds to it physical measurements, in which the notion of standardizing results by reduction to a percentage is introduced and developed. At the same level of instruction the idea of the tangent of an angle is acquired in connexion with the shadow problem to which attention has reverted, and is applied in simple problems of practical surveying.

At a stage yet higher the simple study of statics is begun. We are here in a region where it seems impossible to maintain that our physical problems are introduced as motives to mathematical enterprise. Statics gives excellent opportunities for the application of mathematical knowledge already acquired—including here vectors, which have been studied in the early days of our geometry—but it hardly requires new methods. On the other hand, the study of motion, apart from and preliminary to the investigation of the physical conditions of motion, certainly demands new mathematical concepts and suggests an extension of mathematical technique. Consequently an analysis of the behaviour of moving bodies—the descending surface of water in a jar, Mr. Fletcher's invaluable trolley, unequal weights connected over a pulley, Galileo's ball rolling down a groove—is an exercise that presents all the features which determine admission into the mathematical course.

At the end of a paper which must sorely have tried your patience I will only add that the same remark holds good of work such as the analysis of the motion of bodies moving harmonically, or of the variation of temperature in a rhythmically heated body, which will illustrate the extension of the method even to the work of the sixth form.

Mr. DUMVILLE said that teachers were greatly indebted to the lecturer for his valuable and suggestive paper, but he thought that there was some danger of over-estimating the practical importance of correct observations of natural phenomena. He regretted that the limitations under which class teachers were obliged to work prevented them from adopting fully the methods advocated by specialists, however admirable those methods might be.

Mr. COCK thought that, if the suggestions of the lecturer were adopted, the burden of the teacher would be considerably lightened, for, although some practical points in connexion with geography and mathematics would be dealt with in the light of general elementary science, formal science teaching would not be introduced until the later years of the school course, and philosophic science would not be included in the curriculum of elementary schools. The lecturer rightly based his proposals on the fact that in the earlier years of school life the emotional interest was stronger than the intellectual.

Mr. HAMILTON thought that much time was wasted in school in the performance of useless and uninteresting work. Studies would not be fruitful unless they appealed to the pupil as of real value in relation to his experience.

Mr. F. CHARLES said that his own experience in teaching mathematics on the lines indicated by the lecturer had shown him that it was desirable in the first place to reform the system of weights and measures at present in use, and secondly to modify the arithmetic syllabuses of examining bodies. He thought that, until these reforms were effected, a good deal of mental waste must occur. With regard to the relative advantages of teaching at an early stage decimal and vulgar fractions, he had himself discarded vulgar fractions as cumbersome and inconvenient. He introduced symbols from the first in connexion with measurement, and so tried to teach algebra concurrently with arithmetic.

The CHAIRMAN remarked that practical teachers and the exponents of the theory of education viewed educational problems from different standpoints. Both accepted the view that they must study the child, but he suspected that some masters of method had been in the habit of studying a theoretical child and not a real child. He agreed with the lecturer that in the mental equipment of children there was a common element which must not be ignored by the educationist, but this common element was so obscured by the idiosyncrasies of individual children that it could not by itself offer a trustworthy basis for educational method. Simple materials, in the hands of a skilful teacher, might be made the

means of a good deal of valuable instruction: but, if the treatment were too exhaustive, the result might only be to bore the pupils and to give them an utter distaste for the subject. He was interested to observe that the lecturer advocated a reform in science teaching which was analogous to a reform that had already been effected in the teaching of modern foreign languages: the pupil was to be allowed to observe and to accumulate a large amount of material before proceeding to generalization and precision in definition. He deprecated the view that geography teaching should be regarded merely as a means of introducing in a casual way the teaching of science. The observation of astronomical phenomena was undoubtedly important, but young children were more interested in the study of the doings and occupations of the people around them, and also in occurrences not up in the skies, but on the ground and in the fields. For this reason he would advocate geographical study in the widest sense—the study of the world, of people, of the laws of Nature—as being the centre not only of formal mathematical study, but the centre of three parts of the work of the school. Teachers would be greatly helped if they could be shown how these subjects could be correlated not only in one direction, but in every direction. In connexion with the mathematical side, he would be disposed to dispense with the English system of weights, measures, money, and also to defer to a later stage the learning of vulgar fractions. But to do this would be to come into conflict with the current practice of the outside world. He agreed with a former speaker that the teacher's task would be easier if the requirements of examining boards were made more elastic.

Dr. NIXON having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

## REVIEWS.

## THE AGE OF CAESAR.

*The Greatness and Decline of Rome.* By Guglielmo Ferrero. Translated by Alfred E. Zimmern, M.A., Fellow and Tutor of New College, Oxford. In two volumes. (17s. net. Heinemann.)

These two considerable volumes form the first instalment of a comprehensive work "surveying the entire course of one of the most remarkable societies in history, from its birth to its death—from the far-distant morning when a small clan of peasants and shepherds felled the forests on the Palatine to raise altars to its tribal deities down to the tragic hour in which the sun of Graeco-Latin civilization set over the deserted fields, the abandoned cities, the homeless, ignorant, and brutalized people of Latin Europe"—a general view of the history of Rome from its foundation to the break-up of the Empire, or, rather, a history of Roman imperialism. The present instalment treats mainly the period from the death of Sulla to the death of Caesar, "covering the critical years in which Roman imperialism definitely asserted its sway over the civilized world—when, by the conversion of the Mediterranean into an Italian lake, Italy entered upon her historic task as intermediary between the Hellenized East and barbarous Europe." Five introductory chapters, however, occupying about one-third of the first volume, summarize the earlier history, with the special purpose of tracing the antecedents of the phenomena characteristic of the principal epoch under consideration.

Down to the middle of the second century before Christ, the narrative is very rapid, the author attending specially to the causes, the facts, and the results of the growth of wealth and the expansion of territory, while marking generally the constitutional and social conditions. Then at last he finds the beginnings of his main subject in practical politics:—

It was during the slow decomposition of the military, agricultural, and aristocratic society which began after Rome had won the supreme power in the Mediterranean, and through the working of the forces of commerce and capitalism, that Roman Imperialism, as we know it, was called into being. The spirit of brutality and arrogance, heightened in all classes of the community by the consciousness of controlling imperial riches and dominions, the cupidity of the nobility and the capitalists, and the widespread dismay at the demoralization of the army, transformed the wise and moderate policy of diplomatic intervention devised by Scipio into a relentless policy of aggression and annihilation. It was inaugurated by the third declaration of war against Carthage (149), followed by the conquest of Macedonia (149-148) and of Greece (146), while in 141 war broke out once more in Spain. . . . At the first symptoms of its decadence the Roman public burst out in a passion of pride and savagery which swept Corinth and Carthage clean from their foundations.

The bearings of the Land Bills of the Gracchi and the great proletarian rising under Marius are effectively indicated, and

the conservative reaction under Sulla brings us down to the debut of Caesar in Roman politics, when the narrative opens out into the broad stream of events.

"But Caesar's hour was as yet far distant. For the moment other men loomed large in the public eye." There was Pompey in Spain; there was Cicero in the Forum, Lucullus in the East. Lucullus "was introducing a new conception into Roman policy—the idea of aggressive Imperialism. The invasion of Pontus (B.C. 73) was the first symptom of that policy of the personal initiative of provincial generals which was destined, in the course of a single decade, to replace the feeble and inconsistent control of the Senate and become the strongest force in Roman government." Never has Lucullus figured so bravely—"the strangest and most isolated figure in the whole history of Rome"—

Like Napoleon eighteen centuries later, Lucullus effected a revolution in the methods of government. He substituted war for negotiation as the usual method of solving the difficulties of Eastern policy. . . . By the adoption of a strong and sustained policy of aggression he succeeded in becoming the arbiter of the entire East, reducing one State after another to helplessness in a series of almost foolhardy campaigns. In this he was as overwhelmingly successful as Napoleon himself. . . . Pompey and Caesar were to be the two great pupils of Lucullus and to reap in the field where he had sown. For Lucullus was reserved the part—pathetic, but not inglorious—of the pioneer who encounters all the risks and enjoys but the scanty first-fruits of success.

Caesar, however, eventually works his way through difficulties and dangers to the front, and the author narrates his career in full and critical detail, while providing scope for the collateral history and noting the essential points in the social evolution. Caesar's "greatest work for posterity was the conquest of Gaul, to which he himself attributed so little importance." "He went out to his duties without any definite idea of policy, and with the meagrest knowledge of the country and its inhabitants. No doubt he had a clear notion of his general line of conduct: he intended, as far as possible, to apply to Gaul the methods of Lucullus and Pompey in Asia, to let slip no real or imaginary pretext for military operations, to acquire the riches and reputation so easily picked up in the provinces to demonstrate to his fellow-citizens that he was a skilful diplomatist and a brilliant general." The "De Bello Gallico" was intended to be "a military and political essay for the benefit of outsiders, and all the seductions of its style, the simplicity of diction, were only devised to delude a credulous public" in the menacing situation at Rome in the end of B.C. 52. By the annexation of Gaul, Caesar "was pushed on to those sanguinary acts of repression which form the darkest page of his history. The civil war arose so inevitably out of the policy which he adopted in Gaul that all his efforts to avert it were doomed to failure." His victory in the civil war was "so great as to defeat his own object: ostensibly master of the Roman world, he was in reality suspended between two equally impossible alternatives—either to abandon the position he had just triumphantly captured, or, almost single-handed, with the help of a few personal adherents, to administer a huge and disorganized Empire." Prof. Ferrero freely admits that "Caesar was a genius—a man whose powers have seldom or never been equalled in history," that "in every sphere of his activity he left the imprint of greatness," and that his powers "would have made him, at any time in the world's history, one of the giants of his age." He was "a great general, a great writer, a great character"; but, *pace* Mommsen, "he failed to become a great statesman."

There were three great political objects for which he fought during his career: the reconstruction of the Constitutional Democratic party in 59, a bold adoption and extension of the Imperialism of Lucullus in 56, and the regeneration of the Roman world by the conquest of Parthia after the death of Pompey. The first and second of these ideas were taken up too late; the third was inherently impossible. The first ended in the revolutionary Radicalism of his Consulship, the second in the field of Carrhae and the horrors of the death-struggle of Vercingetorix, the third in the Ides of March.

Still, if he was not a statesman, it "was because the times forbade him to become one"—"a democracy bitten by the mad passion for power, riches, and self-indulgence." "But he was a great destroyer":

In him were personified all the revolutionary forces, the magnificent but devastating forces, of a mercantile age in conflict with the traditions of an old-world society—its religious scepticism, its indifference to morality, its insensibility to family affection, its opportunist and undisciplined politics, its contempt for precedent

and tradition, its Eastern luxury, its grasping militarism, its passion for the baser forms of commerce and speculation, its first tentative efforts towards intellectual refinement, its naive enthusiasm for art and science. There is hardly a stranger irony in history than that the rulers of Germany and Russia should have assumed the title of this prince of revolutionaries. For we fail to grasp the true significance of Caesar's career till we discern that, like Pompey and Crassus and the other great figures of his day, his mission was primarily destructive—to complete the disorganization and dissolution of the old world, both in Italy and the provinces, and thus make way for a stabler and juster system. But when he imagined that he could apply his unrivalled powers of mind and will to all the intellectual and social influences of the time, and direct them to his own purposes, he displeased all parties and was removed from the scene. . . . It is in this rôle of Titanic destroyer, therefore, that we must admire him, a rôle which demanded almost superhuman qualities of conception and achievement.

What the author claims to have demonstrated is that the Roman world-conquest "was in reality the effect, remarkable indeed for its special conditions of place and time, of an internal transformation which is continually being re-enacted in the history of societies on a larger or a smaller scale, promoted by the same causes and with the same resultant confusion and suffering—the growth of a nationalist and industrial democracy on the ruins of a federation of agricultural aristocracies." There is abundance of opportunity for discussion of his views, but that is only another way of saying that his treatment is extremely fresh and independent. The characters and events are Roman, but the spirit of the handling is eminently modern: the frequent references to modern history impart an unusual vividness and reality to the unrolment and exposition of the ancient drama. Both mental idiosyncracies and political prepossessions will arouse antagonism at crucial points. The scholarship of the author, however, is competent; his capacity is undoubted; his style, if sometimes tending to the heroic, is lucid and brisk. The volumes constitute a valuable contribution to the history of an extremely important period, and the application of the same principles to the period of the "Empire" will be awaited with keen interest. There are four appendices, discussing in some detail certain important historical points, and there is a good index.

#### A MONUMENT TO SHAKESPEARE.

*The Shakespeare Library.* General Editor, Prof. I. Gollancz, Litt.D. (Chatto & Windus.)

"The Shakespeare Library" is intended to include "a comprehensive series of works bearing directly on Shakespeare and his age—texts and studies, valuable alike for students and the ever widening circle of general readers interested in all that pertains to the great dramatist and his work." Already we have examples in four departments, and other sections are foreshadowed.

(1) *The Old Spelling Shakespeare.* This is to be "an edition of Shakespeare in such a form as would have harmonized with the poet's own orthography"; that is to say, in the spelling of the best quarto and folio texts. It is edited by Dr. Furnivall, who has given much labour to it for more than a quarter of a century, and who has had the co-operation of the late Mr. W. G. Boswell-Stone in several of the volumes. We have (1) *A Midsummer Night's Dream* and (2) *Love's Labors Lost*, edited by Dr. Furnivall; and (3) *Twelfth Night, or What You Will*, (4) *The Two Gentlemen of Verona*, (5) *The Comedie of Errors*, and (6) *The Taming of the Shrew*, edited by W. G. Boswell-Stone. There will be forty volumes, carefully printed, with the necessary differentiations of type, and with short prefaces and brief textual notes and collations ( $\frac{3}{4} \times 6$  in., 2s. 6d. net each). There can be no question that Dr. Furnivall is right in maintaining that scholars should have Shakespeare's text before them as nearly as possible in the exact form in which it left his hand; and it is a happy circumstance that the project is now well on the way to realization under his own editorship.

(2) *The Shakespeare Classics.* This section will consist of "a comprehensive series of romances, histories, plays, and poems used by Shakespeare as the originals or direct sources of his plays"—from a dozen to a score of volumes, the text in modern spelling. We have three volumes: (1) Lodge's *Rosalinde*, the original of "As You Like It," edited by W. W. Greg, M.A.; (2) Greene's *Pandosto, or Dorastus and Fawnia*, the original of "The Winter's Tale," edited by P. G. Thomas, Professor of English Literature in Bedford College for Women; and (3) Brooke's

poems of *Romeo and Juliet*, the original of "Romeo and Juliet," edited by J. J. Munro (6½ × 4½ in., 2s. 6d. net each). Introductions, textual notes, glossaries (where necessary), and appendixes furnish ample elucidation of each work; and the frontispieces reproduce in photogravure the original titles. The editors have done their work carefully and thoroughly.

(3) *The Lamb Shakespeare for the Young*. The series is, of course, based on Mary and Charles Lamb's "Tales from Shakespeare," which are freely dealt with for the special purpose: "an attempt is made to insert skillfully within the setting of prose those scenes and passages from the play with which the young reader should quite early become acquainted." The idea is tempting—to the maturer mind; but it is a ticklish business, and we shall not be surprised if the young folk skip the intrusive poetry and follow the story. However, that remains to be seen. Good illustrations of the chief scenes are furnished by artists of repute; and appended are songs from the plays, set to music arranged for school use under the direction of T. Maskell Hardy. We have three books: (1) *The Tempest*, (2) *As You Like It*, (3) *A Midsummer Night's Dream*, (1) and (3) illustrated by Miss Helen Stratton and (2) by Miss L. E. Wright. The special school edition is in limp linen (5d. each volume), and the type is large and agreeable.

(4) *Shakespeare's England*. In this section will be a series of volumes "illustrative of the life, thought, and literature of England in the time of Shakespeare." We have three interesting works: (1) *Robert Lanham's Letter* describing a part of the entertainment given to Queen Elizabeth at Kenilworth Castle in 1575—a document freely used by Scott in "Kenilworth"—edited, with elaborate and luminous introduction and notes, by Dr. Furnivall, originally issued for the Ballad Society in 1871 and now brought up to date by supplementary notes and furnished with useful illustrations (5s. net). (2) *The Rogues and Vagabonds of Shakespeare's Youth*, containing reprints of Awdley's "Fraternity of Vacabondes," Harman's "Caveat for Common Cursetors," &c., edited by Edward Viles and Dr. Furnivall, with introduction and notes, and furnished with curious reproductions from the original woodcuts (5s. net). (3) *Shakespeare's Holiashed*, containing a reprint of all the passages in the "Chronicle" used in Shakespeare's historical plays, edited with notes by W. G. Boswell-Stone, and first published in 1896—an ample, laborious, and valuable work (19s. 6d. net). All these volumes are supplied with full indexes. They will be most welcome to all students.

We have no doubt that this enterprise will be strongly supported by the vast army of Shakespeare students throughout the civilized world. The bare outline we have given will indicate the scope and importance of the undertaking and, we would hope, induce some to make acquaintance with the various sections. It is a worthier monument to Shakespeare than any that will ever be raised at Regent's Park.

#### MINER AND MATHEMATICIAN.

*A Brief Biographical Sketch of Robert Rawson*. By Robert Harley, F.R.S. (6d. net. James Clarke & Co.)

This little booklet will probably be a powerful incentive to many an ambitious worker. Its interest lies less in its literary merit than in the personality of the man whose life history is narrated. The story reads like a romance, and affords a striking instance of the fact that truth is often stranger than fiction. Of very humble parentage—for his father earned a living at times as a collier, but more often by selling nuts—Robert Rawson began his active career at seven years of age as a child worker in a Midland coal mine not far from Nottingham. For sixteen years he followed a miner's calling, suffering meanwhile many hardships incidental both to his pursuit and to his environment. His scant leisure was spent in attempts at self-education, and his natural bias for mathematics found a stimulus in the mathematical problems published in a periodical with which he first met by accident. Inquiries as to the information needed for the solution of various questions led him at different times to pick up second-hand books on various branches of mathematics. The study of such methods as would suffice to solve the particular problem in hand formed at this period the chief object of Rawson's research, and later in life the consequent want of uniformity in his standard of knowledge in various departments of the subject became a source of much regret. It was his knowledge of applied mathematics displayed in a newspaper article, bearing his signature and dealing with an actual problem affecting preparations for the construction of

Stephenson's Midland Counties Railway, which resulted in his abandonment of a collier's life and his appointment to a position in the Engineering Office of the Railway at Rochdale, where he remained until the completion of the undertaking in 1842. He then removed to Manchester, where, through Stephenson's introduction, he became acquainted with Eaton Hodgkinson, by whom he was employed to make engineering calculations. Other engineers, too, engaged his services for similar work, and he also found pupils for mathematics. At the time of the construction of the Menai Bridge Rawson was asked by Stephenson to determine the stresses on the girders. In 1847, when well qualified men were in request as masters for the recently established Royal Dockyard Schools, the vacancy at Portsmouth was offered to and accepted by Rawson at the instance of Prof. Hodgkinson. The miner mathematician contributed papers to several of the leading scientific periodicals, and accomplished, moreover, other literary work. His name is also known in the world of inventors, for he contrived the screw compass, which gives at sight the pitch of a screw. Rawson lived to the ripe age of ninety-one. The public owes a debt of gratitude to Mr. Harley for the valuable pamphlet which he has compiled and has had published at a nominal cost, thereby enabling all to become possessors of a most interesting memoir.

## GENERAL NOTICES.

### CLASSICS.

*Essays and Addresses*. By Sir Richard Jebb, Litt.D., O.M., late Regius Professor of Greek in the University of Cambridge. (10s. 6d. net. Cambridge University Press)

The seventeen papers included in this substantial and handsome volume are partly reprinted from different reviews and magazines, partly selected from addresses given to various schools and societies. They are nearly all concerned with classical subjects—Sophocles, Pindar, Lucian, Dælos, Caesar, Thucydides, Suidas, down to Erasmus, the influence of the Greek mind on modern life, and the present tendencies in classical studies; and the more modern subjects, mainly the relations of the Universities to the national life, are coloured by Greek and humanistic idea and feeling. Lady Jebb has done well to save from isolation, and so from probable neglect, these characteristic examples of Jebb's "minor literary work, which occupied the spare moments of a busy life." "Most of these writings," she says, "were struck off under pressure of many engagements. Systematic they are not; yet neither are they mere fragments. Each is, in a sense, complete in itself and all seem to bear the mark of his distinctive handling." This is true, and it means much to those that are able to appreciate the writer's scholarship, insight, and grace of expression. The treatment is in the highest sense literary, on a basis of consummate scholarship. The volume will be most welcome to all that take interest in classical learning and in modern classical influences.

*The Aeneid of Virgil*. Translated into English Verse by John Conington, M.A., late Corpus Professor of Latin in the University of Oxford. (2s. 6d. net. Longmans.)

We heartily welcome this cheap reissue. The metre of "Marmion" and "The Lord of the Isles," though "imparting that rapidity of movement which is indispensably necessary to a long narrative poem," is not so favourable to some other qualities of the original that seem no less important. But, as Conington himself remarks, "the necessity of choosing among difficulties appears to be the inevitable condition of the translator's work," and, in spite of all drawbacks, his translation is very scholarly and interesting. The present edition should spread it far and wide among readers of Virgil.

*Proceedings of the Classical Association, 1907*. Vol. V. (2s. 6d. net. Murray.)

Greek, like the Church, seems to thrive on persecution. This volume exhibits markedly the vitality of Greek study among us in spite of—perhaps also because of—the clamours of opposition. The proceedings of the fifth general meeting of the Association (October 18-19, 1907) are recorded at some length, and, besides Dr. Butler's charming presidential address, there are four papers of conspicuous ability and broadly varied interest by Prof. W. G. Hale (Chicago), Miss Harrison, Mr. R. M. Dawkins, and Mr. W. Warde Fowler. Among the appended matters are the interim report on the pronunciation of Greek and the report of the Curricula Committee on the teaching of Latin in secondary schools. The volume will be warmly welcomed by all classical students.

## MATHEMATICS.

*A Junior Arithmetic.* By Charles Pendlebury, M.A., and F. E. Robinson, M.A. (Without Answers, 1s. 6d. Bell.)

In connexion with valuable school text-books on the above subject, the names of the authors of the present publication are well known, more especially that of Mr. Pendlebury. We shall therefore merely invite attention to certain features in the volume before us. The work meets the requirements of candidates for the leading local examinations. It has been compiled in accordance with the recommendations of the Committee of the Mathematical Association. In the text decimals are now placed before vulgar fractions; use is made of graphical methods of illustration; the Metric System occupies the attention as early as possible; the old order of multiplication is entirely superseded by the new. With respect to the exercises, it may be mentioned that questions have been avoided whose chief importance lies in the practice afforded by them in carrying out elaborate pieces of calculation. The work may be obtained either with or without the answers to the exercises, and will probably become as popular as other text-books produced by Mr. Pendlebury and his colleagues.

*The Methodical Arithmetic.* Parts I.-VII. Edited by W. J. Greenstreet, M.A., F.R.A.S. (1½d., 1½d., 1½d., 2d., 3d., 3d., 4d. Dent.)

The successive Parts are for the corresponding standards in elementary schools. Each is framed with a view to satisfying the Code Regulations of the Board of Education as affecting the particular standard; and the seventh will also be useful to candidates for minor scholarships. The instruction is left entirely to oral teaching. The books before us supply the needful exercises. They have evidently been compiled with very great care, whether we consider the construction of the individual questions or their arrangement so as to obtain work of well graduated difficulty. Practical interest attaches to many of the examples, inasmuch as they convey a knowledge of a variety of useful facts.

*Elementary Concrete Algebra.* By Robert W. Holland, M.Sc., LL.B. (9d. net. Charles & Dible.)

There is much that is useful in this little text-book. The teaching contained in its pages takes into account the greater readiness with which young pupils grasp the meaning of rules when these have been built up by considering the solution of easy practical everyday problems involving in their construction familiar objects. The author also adopts the valuable method of teaching the beginner to look on algebra as generalized arithmetic. He endeavours to establish the truth of the elements of his subject on a basis of common sense, and it is, on the whole, successful.

## MODERN LANGUAGES.

*Victor Hugo: Selected Poems.* Edited, with Introduction and Notes, by H. W. Eve, M.A., formerly Fellow of Trinity College, Cambridge, late Head Master of University College School, London, Officier d'Académie. (Cambridge University Press.) (Pitt Press Series.)

Mr. Eve has selected thirty-one poems from nine different works of Hugo—a selection showing various types and representing very fairly (considering the limits of space) the poems of the author down to (and including) the first series of “*La Légende des Siècles*.” It is quite certain that “modern French poetry presents considerable difficulties to English schoolboys”; and there is no way of getting over these difficulties but by tackling some such collection as this; under such judicious and encouraging guidance as Mr. Eve furnishes. The notes are most careful and illuminative and they abound in poetical comparisons. The introduction deals briefly and pointedly with Hugo's literary work and traces the rise of the Romantic school. A full index to the notes is usefully appended. The volume is a valuable addition to an excellent series.

“*The Temple Molière.*”—(1) *Les Femmes Savantes*. (2) *La Jalousie du Barbouillé* and *Le Médecin Volant*. (3) *L'Étourdi*. With Preface, Glossary, &c., by Frederic Spencer. (1s. 6d. net each. Dent.)

The edition is charmingly got up, and Dr. Spencer furnishes adequate literary and textual explanations. The humours of (2), though historically or socially illustrative, are occasionally somewhat broad for use in schools.

“*Libros para el Maestro.*”—No. VIII., *Guías para Maestros*. Con la demostración de los principios, métodos y fines de la enseñanza común. Par Sarah Louise Arnold, Inspectora de Escuelas en Boston, Massachusetts. Traducido por Isabel Keith Macdermott. Con un suplemento por Conrado Gay-Pollot. Edición hecha por el *Monitor de la Educación Común*, Buenos Aires.

Miss Arnold's book was written for elementary teachers in the United States on a basis of large personal experience, and it cannot but prove extremely useful in its new Spanish dress. The different parts discuss and illustrate principles and methods through lessons on natural objects (plants, animals, the human body), language, reading, geography, spelling and dictation, &c. Señor Gay-Pollot's annex consists of “Ejercicios de Intuición y Lenguaje,” dealing mainly with

the “*nombre, clasificación y partes de los objetos*”—a reprint. A comprehensive and suggestive work.

*Bibliotheca Romanica.* (8d. each number. Chatto & Windus.)

The following are fresh numbers of this excellent and handy series:—(41-44) *Cinco Novelas Ejemplares* (Cervantes); (45) *Os Lusíadas*, V.-VII. (Camões); (46) *L'Avare* (Molière); (47) *I Trionfi* (Petrarca); (48-49) *Decameron*—terza giornata (Boccaccio); (50) *Cinna* (Corneille).

## ENGLISH LITERATURE.

*English Metrists in the Eighteenth and Nineteenth Centuries: being a Sketch of English Prosodical Criticism during the last two hundred years.* By T. S. Omond, M.A. Edin. and Oxon., formerly Fellow of St. John's College, Oxford. (6s. net. Frowde.)

The survey included in the present volume has grown out of all proportion to its original intention, which was to form an appendix to the author's “*Study of Metre*.” Mr. Omond has not merely enumerated and summarized treatises on English prosody throughout the whole period of systematic study of the subject; he has traced the gradual development of sounder views about verse-structure, treating more fully such works as have influenced this development. The work is an original inquiry, acute and fair, and enormously laborious. We shrink from detail: students specially interested will go to the book direct. After all, Mr. Omond concludes that one thing is certain: namely, “that we have as yet no established system of prosody.” Yet “that the synthesis will come is surely past question”; and when it does come, Mr. Omond suspects, “it will be found less and not more complex than its many predecessors,” and “it will not come on lines of Greek prosody.” “There is still room for much independent inquiry,” and Mr. Omond welcomes Prof. Saintsbury's “*History of English Prosody*” as a treatment from a different point of view—complementary, if divergent in aim.

*Ballads and Poems.* By Members of the Glasgow Ballad Club. Third Series. (7s. 6d. Blackwoods.)

Even in the workaday city of Glasgow—“in the strong City's heart”—there has been for almost a generation a nest of singing birds, and here is a third sample of their warblings, culled from the productions of the past ten years. Scarcely half-a-dozen of the writers have achieved more than local fame, and yet there is not one of these poems that we should wish to reject. The subjects range freely from patriotism to metaphysics and teleological speculation, but neither whisky nor haggis obtains traditional laudation, and there is not, we think, a single erotic strain. At the same time, there is ample suffusion of feeling, deep and delicate, skilful turns of expression on any page, and by no means seldom a genuine stroke of poetry. The collection is very interesting and highly creditable, and the vocabulary is not Scotch enough to daunt the Southron. We do not remember the previous series, and we may never see the next, but we have enjoyed this one. The mere fact of the existence of such a society is very pleasantly suggestive.

*With Byron in Italy.* Edited by Anna Benneson McMahan. (5s. net. Fisher Unwin.)

A companion volume to “*With Shelley in Italy*” by the same editress. It consists of “a selection of the Poems and Letters of Lord Byron relating to his life in Italy” during the years 1817-23, arranged in chronological order and illustrated by sixty full-page pictures from photographs. We do not vouch for it that Byron's “love for Italy, which was quite as intense” as his love for Greece, “is less generally appreciated”; but we hope that these poems and letters, written “during the most mature and most productive period of Byron's life,” will not lack adequate appreciation. The selections have been carefully made and arranged; the numerous and excellent illustrations are instructive as well as attractive; and the get-up is agreeable.

## ENGLISH REPRINTS AND NEW EDITIONS.

*The World's Classics.* (1s. net each volume. Henry Frowde.)

Another batch of volumes of this handy and agreeable series:—(1) *Emma* (Jane Austen), with introduction by E. V. Lucas; (2) the second volume of *The Poetical Works of Robert Browning*, containing “*Dramatic Lyrics*” (1842), “*Dramatic Romances*” (1845), “*Man and Woman*” (1855), and “*Dramatis Personae*” (1864); (3) *Reynolds's Discourses*, &c., with introduction by Austin Dobson, LL.D.; (4) *A Selection from William Cowper's Letters*, edited by E. V. Lucas; (5) and (6) *The Works of Edmund Burke*, Vols. V. and VI., with introductions by F. W. Raffety; (7) *Unto this Last and Munera Pulveris* (Ruskin); (8) *Doctor Faustus* (Marlowe), and *Goethe's Faust, Part I.* (Anster's translation), introduction by Dr. A. W. Ward, Master of Peterhouse. Classical writings—varied, interesting, and important.

*Nelson's Library.* (7d. each volume.)

Half-a-dozen new volumes of recent fiction, agreeably printed and tastefully and flexibly bound:—(1) *A Lame Dog's Diary*, by S. Macnaghtan; (2) *The Man from America*, by Mrs. Henry de la Pasture; (3) *Sir John Constantine*, by “Q.”; (4) *The Princess Passes*, by C. N. and A. M. Williamson; (5) *The Translation of a Savage*, by Sir Gilbert Parker; (6) *White King*, by Jack London. The group under the

above heading in our last issue belong to another series—"Nelson's Sixpenny Classics"—and ought to have been classed accordingly. We regret the accidental misplacement.

*Collins' Clear-Type Press.*

In the agreeable series of "Collins' Handy Modern Fiction" (7d. each volume) we have four new issues—(1) *A Weaver of Webs*, by John Oxenham; (2) *A Daughter of Helth*, by William Black; (3) *The Wreck of the Grosvenor*, by W. Clark Russell; (4) *Comin' thro' the Rye*, by Helen Mathers. Each volume has a coloured frontispiece and an ornamental title-page. In the excellent series of "Collins' Handy Illustrated Pocket Classics"—(1) *The Last Days of Pompeii* (Lytton), (2) *Sense and Sensibility* (Jane Austen), both illustrated by A. A. Dixon (1s. net each); and (3) *Vanity Fair* (Thackeray), illustrated by Harold Piffard, in flexible polished leather, all gilt (2s. net)—a charming edition.

*Everyman's Library.* (1s. net each volume. Dent.)

This excellent and varied collection now numbers 315 volumes. Our latest batch includes: (1) *English Traits, Representative Men*, and five other Essays (Emerson); (2) *The Water-Babies and Glaucus* (Charles Kingsley); (3) *Ungava, a Tale of Esquimaux-Land* (Ballantyne); (4) *History of the Conquest of Peru* (Prescott); (5) *Omoo, a Narrative of Adventures in the South Seas* (Herman Melville); (6) *Rollo at Work and at Play* (Jacob Abbott); (7) *The Fifteen Decisive Battles of the World* (Creasy); (8) and (9) *Tacitus' Historical Works* (Annals, History, Germania, Agricola), translated by Murphy; (10) *The Travels of Marco Polo the Venetian*; (11) *Wordsworth—The Longer Poems*; (12) *Euripides* (in English verse), Vol. II. (tragic plays).

*Heinemann's Favourite Classics.* (6d. net each volume.)

A new series of four "Selected Essays of Lord Macaulay," with very good introductions by H. W. C. Davis, and photogravure frontispieces:—(1) *Warren Hastings*; (2) *Lord Clive*; (3) *The Earl of Chatham*; (4) *Frederic the Great*. Mr. Davis, we are glad to observe, emphatically warns readers against Macaulay's serious errors of fact in the essay on Warren Hastings, and points to more recent works, where some of them are exposed and refuted; but really the essay ought always to be annotated on such points. The type, though small, is very clear, and the form is handy.

*The People's Library.* (8d. net each volume. Cassell.)

The March instalment of this astonishingly cheap and good series contains fourteen volumes pretty fairly divided between poetry and fiction:—(1-4) *The Works of Shakespeare*, each volume running to 600 or 700 pages and having a separate glossary; (5) *Goldsmith's Vicar of Wakefield, and Poems*; (6) *The Ingoldsby Legends* (Barham); (7) *Burns's Poems and Songs*; (8) *Andersen's Fairy Tales*; (9) *Sense and Sensibility* (Jane Austen); (10) *The Last of the Barons* (Lytton); (11) *The Deerslayer* (Fenimore Cooper); (12) and (13) *Oliver Twist and Barnaby Rudge* (Dickens); (14) *The Channings* (Mrs. Henry Wood). The Shakespeare quartette is an outstanding example of publishing enterprise. The whole selection is excellent in matter, and the get-up is tasteful and agreeable.

### EDUCATION.

"Pioneers in Education."—(1) *J. J. Rousseau and Education by Nature*; (2) *Herbert Spencer and Scientific Education*; (3) *Pestalozzi and Elementary Education*; (4) *Herbert and Education by Instruction*. By Gabriel Compayré, Correspondant de l'Institut, Recteur de l'Académie de Lyon. Translated (1) and (3) by R. P. Jago, (2) and (4) by Maria E. Findlay. (2s. 6d. net each. Harrap.)

This is a new series of monographs on the Great Educators "of all nations and of every age," from the indefatigable pen of M. Compayré, who is already well known to English educationists. The purpose is to describe the men and their environment—what they thought and did, and what institutions and tendencies they were influenced by or militated against; and then "to bring face to face ideas held long ago with modern opinions, with the needs and aspirations of society to-day, and thus to prepare the way for a solution of the pedagogical problems confronting the twentieth century." The form is popular, readable, and broadly suggestive; and, though not so systematic and detailed as a critical monograph would be expected to be, it yet offers a considerable amount of criticism as well as of information. The volumes are especially suitable to the general reader or to the student commencing the study of particular systems. The appended bibliographies are somewhat scanty. Thus we do not find any reference to Dr. Hayward's recent books on Herbart, to say nothing of Dr. Davidson's Leibnizian "interpretation." All the translations are admirably done. Each volume has a portrait frontispiece, and the type and get-up are excellent. The series ought to be widely read and studied.

*Education and National Progress.* By Sir Norman Lockyer, K.C.B. With an Introduction by the Right Hon. R. B. Haldane, K.C., M.P. (5s. net. Macmillan.)

The volume brings together about a score of essays and addresses dating between 1870 and 1905. The aim throughout is "to show how

vital it is, from a national point of view, that the education of every-body, from prince to peasant, should be based upon a study of things and causes and effects as well as of words, and that no training of the mind is complete which does not make it capable of following and taking advantage of the workings of natural law which dominate all human faculties." The point is that the best educated nation, given equal numbers, can "best hold its own in the struggle for existence both in peace and war." Sir Norman feels that he and his friends have been to a large extent crying in the wilderness. The sooner they are listened to the better for the national position. We have already referred to his urgent plea for largely increased endowments of the higher education and research and for the general utilization of scientific methods in all branches of the administration. The volume contains much information cogently marshalled in argument, and it ought to be very seriously studied by all having to do with government and administration as well as with education.

*The Schoolmasters Yearbook and Directory, 1908.*

(7s. 6d. net. Swan Sonnenschein.)

"Spät kommt Ihr—doch Ihr kommt"; but the editors need not worry about the somewhat later appearance of the sixth annual issue, for the book is so comprehensive and useful that a warm welcome is assured. How did we get along without it? How should we get along without it? We are pleased to note that "the editors feel that the existence of their book depends upon its accuracy," and we readily leave the point there. Any one that has had a similar experience will vividly realize the enormous difficulties of the situation and make the most liberal allowances. We ourselves thumb the volume frequently enough, and we do not complain. On the contrary, we are surprised at the fullness and the accuracy of the information. In Part I. we have a compact review of the year, an extensive account of the administration of secondary education, compendious information about educational societies and organizations, Universities and colleges, examinations and inspection, a chronicle of the year, a bibliography of educational books, and even of educational articles of importance, and so forth. Part II. is an invaluable directory. The volume is indispensable to educationists.

*The Public Schools Yearbook and Preparatory Schools Yearbook.*

(3s. 6d. net. Swan Sonnenschein.)

This very serviceable annual is now in its nineteenth year and still growing vigorously. Here, again, the editors are keen to secure accuracy as well as fullness of information, and they succeed. They lay emphasis on the fact that the volume "supplies the most detailed information regarding entry into the professions and deals with all careers open to the public-school boy." The account of each public school is practically a businesslike prospectus, from which parents and guardians can learn all they can reasonably want to know about the institution. There has been a good deal of rearranging and rewriting so as to present the matters more effectively; and, while the old sections remain in up-to-date form, various additional subjects have been introduced—"How to become a Chartered Accountant," list of educational publishers, list of public-school periodicals, &c. Evidently every effort has been made—and made successfully—to render the volume practically useful.

### MUSIC.

*School Band Music.* Edited by W. G. McNaught. (Novello.)

The series is intended to meet the needs of school string bands, and will include arrangements and original pieces of every suitable description. The first selection comprises eight numbers, containing 14 pieces all very simply arranged by Percy E. Fletcher. The parts for 1st violin, 2nd violin, viola, and violoncello are each in a separate cover (3d.). The selection is attractive, and much care has been taken to render the presentation practically helpful.

Messrs. Breitkopf & Härtel publish *First Children's Songs and Dances in Tonic Sol-fa notation* (4d.), and *New Children's Songs and Dances in Tonic Sol-fa notation* (4d.) and in old notation (6d.)—text, music, and arrangement for the stage by E. Jaques-Dalcroze, English version by R. H. Elkin. The pieces are interesting and simple.

Mr. F. H. Sikes, M.A., has composed *The Cadets' March Song* for the League of the Children of the Empire (2d. Charles & Dible). It is introduced and followed by bugles and drums, and it is sufficiently spirited.

### MISCELLANEOUS.

*Tales from the Talmud.* By E. R. Montague. (1s. 6d. Blackwoods.)

In a long introduction Mr. Montague sketches the history and scope of the "Talmud"; but "the volume is mainly confined to a collection of tales which, sometimes quaint, sometimes marvellous, often of great intrinsic beauty, and always illustrative of the inner lives and feelings of the Jewish people two thousand years ago, constitute in some respects one of the most interesting parts of the 'Talmud.'" As the "Talmud" consists of the law and commentaries, one is rather surprised to find an author culling a very interesting book of stories from it; but then "nothing less like a European code of laws can well

(Continued on page 186.)

London: HENRY FROWDE, Oxford University Press, Amen Corner, E.C.

be imagined." It defies system and chronology; and when a legal expositor thinks of a story he drops his law and tells his story, whether the reader is likely to see any connexion or not. A curiously interesting, instructive, and amusing book.

*St. Agnes, and other Dramas.* By E. C. Harris. (Dent.)

"St. Agnes" is, we think, a reprint; the other two are "St. Faith" and "SS. Adrian and Natalia." They all represent the constancy of martyrs during the persecution of Christians in the time of Diocletian and his immediate successors (A.D. 304-306). The verse is fluent and smooth, and the action and the characterization show considerable dramatic power.

*The Oxford Degree Ceremony.* By J. Wells, Fellow of Wadham College. (Clarendon Press.)

In this neat and handy little volume Mr. Wells sets forth the meaning of the Oxford academic forms and ceremonies and shows how much of University history is involved in them. It is a very careful compilation, and will be welcomed by many besides the sons of Oxford. The publishers have furnished seven very interesting illustrations, including the University seal and a reproduction of the portrait of a fourteenth century Chancellor.

*The Navy League Annual, 1907-8* (The Navy League, 13 Victoria Street, S.W.), makes a substantial and instructive volume. The honorary editor (Mr. Alan H. Burgoyne) traces the progress of the British Navy and of foreign navies, and there are fifteen other articles on different aspects of the subject by writers of technical experience. The illustrations and ship-plans are numerous and good.

## FIRST GLANCES.

### CLASSICS.

*Caesar, Preparation for Reading, Six Weeks.* By James Morris Whiton, Ph.D. Yale. Fifth Revised Edition, with additions by Helen Isabel Whiton, Ph.D. Col. 2s. 6d. Ginn.

[Adapted to Allen and Greenhough's, Bennett's, and Harkness's grammars. Exercises, with grammar interwoven, and practical directions. "Thoroughness has been aimed at equally with expedition."]

*Caesar, Preparatory.* (1) *De Bello Gallico.* Books II., III., 1s. 6d. (2) Book III., separately, 1s. By Frank Ritchie, M.A. Longmans.

[On the method of "First Steps in Caesar." Explanation of Roman Army organization; grammatical points; notes; vocabulary; 6 maps and plans. Excellent introductory works.]

*Cicero: In Catilinam, I.-IV.* Edited by J. F. Stout, B.A. Cantab. 2s. 6d. net. Clive (University Tutorial Series).

[Introduction and notes scholarly and adequate; useful index of proper names. Very serviceable edition.]

*Cothurnulus: Three Short Latin Historical Plays for the use of Beginners.* By Edward Vernon Arnold, Litt.D., Professor of Latin at the University of North Wales, formerly Fellow of Trinity College, Cambridge. 1s. Bell.

[The plays "stand somewhere between simplified texts and original composition." Very skilfully composed; interesting; useful. Vocabulary.]

*Delecta Biblica.* Compiled, from the Vulgate Edition of the Old Testament and arranged for the use of Beginners in Latin, by a Sister of Notre Dame. 1s. Longmans.

[56 passages, with notes and vocabulary. Useful collateral reading, though the Latin may not be Ciceronian.]

*Homer: Iliad, V., VI.* Translated by E. H. Blakeney, M.A. 1s. Bell (Classical Translations).

[Good translation, with helpful foot-notes]

*Latin Texts, Blackie's.* (1) *Caesar, Gallic War, VIII.* Edited by W. H. D. Rouse, Litt.D. 6d. net. (2) *Cornelius Nepos.* Edited by W. H. S. Jones, M.A. 8d. net.

[Very careful and useful series.]

*Vocabularies.* (1) *A General Vocabulary to Caesar's Gallic War.* (2) *A General Vocabulary to Virgil.* Prepared under the editorship of A. Graham, M.A., formerly of the High School of Stirling. 1s. each. Blackie.

[Handy companions to the plain texts.]

### MATHEMATICS.

*Arithmetic, The "A. L." Methodic.* By David Thomas, Assistant Secretary of Education for Carnarvon. Parts I.-III., 3d., 4d., 4d. Answers (separate), 9d. Complete work, 1s. 6d.; with Answers, 2s. E. J. Arnold.

[For upper classes of elementary schools, higher elementary and secondary schools, candidates for county scholarships, Oxford and Cambridge Locals, and the like. The elementary work is based on the "New Syllabus" of the Code of 1903. The complete work contains the three parts, together with some thirty pages of reprints of recent examination questions.]

*Arithmetic, The Methodical.* Edited by W. J. Greenstreet, M.A., F.R.A.S., Head Master of the Marling School, Stroud. Parts II., IV., V., VI., VII., 1jd., 2d., 3d., 4d. Dent.

[For the corresponding standards in elementary schools, in accordance with the Code of Regulations issued by the Board of Education.]

*Arithmetic Test Cards.* Standards III. and IV.—40 cards each. 1s. 3d. net each packet. Jack.

[Excellent exercises; well arranged for practice.]

*Arithmetic Test Questions, Practical, McDougall's.* Classes III. and IV. 1d. net each.

[A very useful collection.]

*Calculus, Differential and Integral, A First Course in the.* By William F. Osgood, Ph.D., Professor of Mathematics in Harvard University. 10s. 6d. Macmillan.

*Cambridge Tracts in Mathematics and Mathematical Physics.* No. 6, *Algebraic Equations*, by G. B. Matthews, M.A., F.R.S. No. 7., *The Theory of Optical Instruments*, by E. T. Whittaker, M.A., F.R.S., Sc.D., Royal Astronomer of Ireland. 2s. 6d. net each. Clay (Cambridge University Press Warehouse).

*Geometry of the Conic, The Elements of the.* By G. H. Bryan, M.A., F.R.S., Professor of Mathematics in University College, Bangor, and R. H. Pinkerton, M.A., Professor of Applied Mathematics in University College, Cardiff. 3s. 6d. Dent (Mathematical and Scientific Text-Books for Schools).

[With a chapter on the Geometry of certain Curves occurring in Applied Mathematics.]

*Geometry, Practical, for Art Students.* By John Carroll. 1s. 6d. Burns & Oates.

[A course of lessons on the construction of plane figures and scales, proportionals, geometrical tracery, and elementary solid geometry (with an appendix). 59th edition.]

*Geometry, The Elements of, in Theory and Practice.* Parts I. and II., comprising the subject matter of Euclid I., III. 1-34, and IV. 1-9 and 15, with experimental section and additional theorems and problems. 2s. 6d.; separately, 1s. 6d. and 1s. 9d. By A. E. Pierpont, B.Sc. Longmans.

[Based on the Mathematical Association Committee's report.]

*Geometry, Theoretical and Practical. Part II.* By W. P. Workman, M.A., B.Sc., Head Master of Kingswood School, Bath, and A. G. Cracknell, M.A., B.Sc., F.C.P., Science Director of University Correspondence College. 2s. Clive.

[Contains matter of Euclid II., III. 35-37, IV. 10-16, VI.]

*Graphs, Elementary, Cassell's.* By V. M. Turnbull, M.A., Senior Mathematical Master, Perse School, Cambridge. 9d.

[Unusually full and capable treatment; suitable for students of physics and engineering, as well as purely mathematical students. Examples numerous and good; answers.]

*Geometry, Practical, Constructions in.* By the Rev. H. F. Westlake, B.A. Oxon., Senior Mathematical Master of Lancing College. 1s. Philip.

[Primarily for "the minimum required of candidates in the Oxford and Cambridge School Examinations," but generally useful.]

*Infinite Series, An Introduction to the Theory of.* By T. J. F.A. Bromwich, M.A., F.R.S., Fellow and Lecturer of St. John's College, Cambridge. 15s. net. Macmillan.

*Integration, Practical.* By A. S. Percival, M.A., Trinity College, Cambridge. 2s. 6d. net. Macmillan.

[For engineers, electricians, &c.]

### PRACTICAL MATTERS

*Agricultural and Dairy College, The Midland.* Various Bulletins, giving useful Reports on Field Trials.

*Cakes: 100 Tested Receipts.* By Florence B. Jack, late Principal of the School of Domestic Arts, Edinburgh. 1s. net. Jack (Domestic Arts Series).

*Eyesight in Schools.* By C. C. Caleb, M.B., M.S. Durh., Professor of Physiology and Botany, Medical College, Lahore. Lahore: Gulab Singh.

[Written under the orders of the Director of Public Instruction, Panjab, and with the approval of the Panjab Text-Book Committee. Efficient and simple. Illustrations.]

*Housecraft, Modern: The Art of Reasonable Living.* By Lucy H. Yates. Heinemann.

["I can imagine no more important woman of business than she who successfully manages a home, even a very humble one." Sensible and informatory.]

*Infants, Care of, Lessons on the.* By Mrs. Watson. 1d. (9d. a dozen). B. Broadbent, Esq., Gatesgarth, Lindley, Huddersfield.

["Fo: use in schools." Suggestive and serviceable.]

Injured, First Aid to the. Six Ambulance Lectures. By Dr. F. Es-march, Professor of Surgery, University of Kiel. Translated from the German by H.R.H. Princess Christian. 2s. net. Smith, Elder, & Co.

[Seventh edition, revised and enlarged. Additional illustrations.]

Nursing at Home, with Chapters on the Care of Infants and Children. By J. D. E. Mortimer, M.B. Lond., F.R.C.S., and R. J. Collie, M.D. Aberd. 8d. net. Gill.

[Thoroughly good. Handy in form.]

Rafa Work. By M. Swannell. 2s. net. Philip.

[59 figures, with practical directions. Excellent.]

Shoot, How to. By E. J. D. Newitt. 6d. net. Simpkin, Marshall, & Co. ["Manual of instruction in marksmanship." "The new method of learning rifle shooting." "Prepared in harmony with the official military system."]

Soldering, Brazing, and the Joining of Metals. By Thomas Bolas, F.C.S., F.I.C., &c. 6d. net. Dawbarn & Ward ("The Home Workers" Series of Practical Handbooks).

[Third edition, revised and enlarged. Additional notes.]

Stammering: a Method of Self-Cure. By Walter Clarke. 1s. Author, The Chesnuts, Clifton, near Biggleswade, Beds.

[Written from personal experience.]

EDUCATION.

Assistant Masters, Incorporated Association of, in Secondary Schools. Seventeenth Annual Report.

Assistant Mistresses, Association of, in Public Secondary Schools Report of the Twenty-fourth Year's Work, and of the Twenty-fourth Annual Meeting.

Board of Education.—(1) List of Evening Schools in England and Wales for year ending July 31, 1908 (Cd. 3920. 5½d.). (2) Reports from those Universities and University Colleges in Great Britain which participate in the Parliamentary Grant, 1907 (Cd. 3885. 1s. 7d.). (3) Regulations and Conditions of Recognition of Elementary Schools in England (Elementary Education Act, 1876, § 48) as Certified Efficient Schools (Cd. 3944. 1d.). (4) National Competition (South Kensington) 1907: List of Awards, Reports of Examiners, 46 Full-page Illustrations (3s.). Wyman.

Co-education of Boys and Girls. Lecture by Mrs. Ennis Richmond. 3d. (4d. post free). Street (42 Albemarle Street, W.).

["Boys and girls are meant to be together."]

Columbia University. Report on Certain Educational Characteristics in England and France.

[By Dr. J. H. Canfield. "Thirty-five days were spent in England and eleven days in France." Cautious and brief summary.]

English Association, The.—(1) Leaflet No. 4: Shelley's View of Poetry—Lecture by Prof. A. C. Bradley, Litt.D. Reprinted from the *Albany Review* (February). (2) Bulletin No. 3, with Report of the Second General Meeting (January 10, 11).

Johns Hopkins University Circular, No. 1, 1908: Report of the President of the University.

L.C.C.—Report on Accommodation and Attendance in Elementary Schools for year ended March 31, 1907. No. 1134. 5s. (parcel post, 5s. 5d.). King.

Oxford Local Examinations: Regulations for 1909.

Read, Write, and Debate, How to. 1d. Leng.

[New and enlarged edition. Judiciously instructive.]

Secular Teaching, The Religious Side of. By L. H. M. Soulsby. 2d. net. Longmans.

Sweden: The Board-School Houses of Norrköping—Plans and Pictures, with some Notes on the so-called Norrköping System. By J. Bager-Sjögren, Ph.D., Superintendent of Board-Schools. Royal Swedish Committee for the Second International Congress for School Hygiene.

[Very interesting. Facts carefully stated.]

Texas, The University of: Catalogue (=Calendar), 1906-7.

[College of Arts; Departments of Education, Engineering, Law, Medicine; Schools of Medicine, Pharmacy, and Nursing. Full and interesting.]

Translation Method, A Plea for the. By Ch. V. Jogarao, Assistant Master, Maharajah's College, Vizianagram. Madras: Vaijavanti Press.

[English "has become the leading language of India." "For completing the 'Edifice of English Instruction,' translation ought to furnish the foundation." A thoughtful essay.]

MISCELLANEOUS.

Golfers' Manual, Leng's. 1d.

[Much information. Brief biographies, with portraits.]

Cricket Handbook, Leng's. 1d.

MATHEMATICS.

16361. ("SOLIDUS.")—Each vertex of a polygon is joined to the mid-point of the line joining its adjacent vertices. Prove that if all but one of these lines are concurrent, then all must be concurrent.

Solutions (I.) by S. NARAYANA AIYAR and W. F. BEARD, M.A.; (II.) by W. RIGBY, B.A.

(I.) Suppose at each vertex forces are acting proportional to and in the direction of the sides emanating from that vertex. The whole system will be in equilibrium. The resultant of the forces at a vertex is equal to twice the length of the line joining the vertex to the mid-point of the line joining its adjacent vertices. If the polygon has  $n$  sides,  $(n-1)$  of these resultant forces are, by hypothesis, concurrent, and so have themselves a single resultant which, with the resultant corresponding to the  $n$ th vertex, is in equilibrium. Therefore all the  $n$  resultants are concurrent.

(II.) Mid-point of line joining  $(x_1, y_1)$  and  $(x_2, y_2)$  is  $\frac{1}{2}(x_1 + x_2), \frac{1}{2}(y_1 + y_2)$ . The line joining

$(x_2, y_2)$  and  $[\frac{1}{2}(x_1 + x_3), \frac{1}{2}(y_1 + y_3)]$

is given by

$$(x - x_2) / [\frac{1}{2}(x_1 + x_3) - x_2] = (y - y_2) / [\frac{1}{2}(y_1 + y_3) - y_2],$$

i.e.,  $x(y_1 - 2y_2 + y_3) - y(x_1 - 2x_2 + x_3)$

$$+ (x_1y_2 - x_2y_1) - (x_2y_3 - x_3y_2) = 0.$$

Similarly line joining  $(x_3, y_3)$  to mid-point of line joining  $(x_2, y_2)$  and  $(x_4, y_4)$  is given by

$$x(y_2 - 2y_3 + y_4) - y(x_2 - 2x_3 + x_4) + (x_3y_3 - x_3y_2) - (x_3y_4 - x_4y_3) = 0,$$

and corresponding lines by

$$x(y_3 - 2y_4 + y_5) - y(x_3 - 2x_4 + x_5) + (x_3y_4 - x_4y_3) - (x_4y_5 - x_5y_4) = 0,$$

and  $x(y_{n-1} - 2y_n + y_1) - y(x_{n-1} - 2x_n + x_1) + (x_{n-1}y_n - x_ny_{n-1}) - (x_ny_1 - x_1y_n) = 0.$

On adding  $x(2y_1 - y_n - y_2) - y(2x_1 - x_n - x_2) + (x_1y_2 - x_2y_1) - (x_ny_1 - x_1y_n) = 0.$

Since the first  $n-1$  lines are concurrent, the  $n$ th line, i.e., the line through  $(x_1, y_1)$  bisecting the line joining  $(x_2, y_2)$  and  $(x_n, y_n)$  passes through the same point as the first  $n-1$  lines.

16380. (V. DANIEL, B.Sc.)—Two triangles (of given areal modulus  $\lambda^2 \equiv 1/\lambda'^2$ ) have

$$\cot A + \cot A' = \cot B + \cot B' = \cot C + \cot C' = x/\sqrt{3}.$$

If the relations of circumscription and inscription ( $A$  on  $a'$ ,  $A'$  on  $a$ , ...) are mutually interchangeable by rotation of either triangle through an angle  $\theta$  about the same point, show that

$$(x^2 - \lambda^2)(x^2 - \lambda'^2) = 4 \cos^4 \frac{1}{2}\theta \text{ or } 4 \sin^4 \frac{1}{2}\theta.$$

Solution by the PROPOSER.

Since  $\cot A - \cot B = \cot B' - \cot A'$ ,

and two others, we have by multiplication

$$\Sigma(\cot A \cot B - \cot^2 C) = \Sigma(\cot A' \cot B' - \cot^2 C').$$

Hence  $\cot \omega = \cot \omega'$ , and the general equations of my Solution 16161, Vol. XII., become

$$k - k' = l - l' = m - m' = sx/\sqrt{3} \quad \text{!}$$

$$\text{and } \cot A - \cot A' = [(1 + l + l') - (1 + m + m')]x/\sqrt{3}.$$

Now, let

$$1 + k + k' = p(k - k'), \quad 1 + l + l' = q(l - l'), \quad 1 + m + m' = r(m - m');$$

therefore

$$\lambda^2 - \lambda'^2 \equiv \Sigma(k - k')(1 + l + l') = \frac{1}{3}s^2x^2\Sigma p,$$

and

$$2(\lambda^2 + \lambda'^2) - 1 \equiv \Sigma(1 + k + k')(1 + l + l') + \Sigma(k - k')(l - l') = \frac{1}{3}s^2x^2\Sigma pq + s^2x^2,$$

also

$$\cot A - \cot A' = \frac{1}{3}s^2x^2(q - r),$$

and two others,

$$\cot A + \cot A' = x/\sqrt{3} = \dots;$$

therefore

$$4 = x^2 + \frac{1}{3}s^2x^4 \Sigma(q - r)(r - p)$$

$$= x^2 + \frac{1}{3}s^2x^4 [3\Sigma pq - (\Sigma p)^2]$$

$$= x^2 + x^2 [2(\lambda^2 + \lambda'^2) - 1 - s^2x^2] - (\lambda^2 - \lambda'^2)^2/s^2;$$

therefore

$$0 = s^4x^4 - 2(\lambda^2 + \lambda'^2)s^2x^2 + (\lambda^2 - \lambda'^2)^2 + 4s^2$$

$$= [x^2 \sin^2 \theta - (\lambda^2 + \lambda'^2)]^2 - 4 \cos^2 \theta.$$

This resolves into two quadratics for  $\cos \theta$ , giving

$$\cos \theta = \mp 1 \pm \sqrt{[(x^2 - \lambda^2)(x^2 - \lambda'^2)]};$$

therefore

$$(x^2 - \lambda^2)(x^2 - \lambda'^2) = 4 \cos^4 \frac{1}{2}\theta, \text{ or } 4 \sin^4 \frac{1}{2}\theta.$$

**16246.** (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—A carpenter has a plank of wood 13 feet 4 inches long, 1 foot wide, 1 inch thick. Show how from it he can construct five boxes in descending order of magnitude, such that the smaller just fit into the larger.

*Solution by M. T. NARANIENGAR, M.A.*

Let  $x, y, z$  denote the edges in inches of the largest box. Then,  $y$  the Question,  $xyz - (x-10)(y-10)(z-10) = 1920$ . Hence

$$xy \cdot yz + xz - 10(x + y + z) + 100 = 192,$$

of which  $x = 16, y = 12, z = 10$  are solutions obviously. But this would leave no room within the fifth box. Hence a second solution should be found.  $x = 14, y = 12, z = 11\frac{1}{2}$  are also values satisfying the equation, which are more practicable.

**16368.** (Professor E. B. ESCOTT.)—Solve in integers

$$x^2 + y^2 + z^2 = u^4 + v^4 + w^4, \quad x^4 + y^4 + z^4 = u^8 + v^8 + w^8,$$

and find a general formula for the solutions. Example :

$$5^2 + 19^2 + 24^2 = 3^4 + 4^4 + 5^4, \quad 5^4 + 19^4 + 24^4 = 3^8 + 4^8 + 5^8.$$

*Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.*

Algebraically  $U^4 + V^4 + (U + V)^4 = 2(U^2 + UV + V^2)^2 = 2C^2$ , suppose. Hence every quantity  $C$  of form  $C = U^2 + UV + V^2$  gives

$$2C^2 = U^4 + V^4 + W^4,$$

where

$$W = U + V.$$

Here  $C$  is either a prime  $p = 6\omega + 1 = A^2 + 3B^2$ , or a product of such primes. And, in the latter case,  $C$  is expressible in at least two ways in this form, say  $C = C'$ ,

$$C = A^2 + 3B^2 = (A \sim B)^2 + (2B)(A \sim B) + (2B)^2 = U^2 + UV + V^2,$$

$$C' = A'^2 + 3B'^2 = (A' \sim B')^2 + (2B')(A' \sim B') + (2B')^2 = U'^2 + U'V' + V'^2.$$

Hence  $U^4 + V^4 + W^4 = 2C^2 = 2C'^2 = U'^4 + V'^4 + W'^4$ ,

where  $W = U + V, \quad W' = U' + V'$ .

Now take  $U = u^2, \quad V = v^2, \quad W = w^2 = u^2 + v^2$ .

This is satisfied by taking

$$u = \xi^2 \sim \eta^2, \quad v = 2\xi\eta, \quad w = \xi^2 + \eta^2.$$

Hereby  $u^8 + v^8 + w^8 = u^8 + v^8 + (u^2 + v^2)^4 = 2(u^4 + u^2v^2 + v^4)^2 = 2C^2 = 2(C^2) = 2(U^2 + UV + V^2)^2 = 2C'^2$ .

Here  $C = (u^2 - uv + v^2)(u^2 + uv + v^2)$  has the two forms

$$C = [u^2 \sim (\frac{1}{2}v)^2]^2 + 3(\frac{1}{2}v)^2 = u^4 + u^2v^2 + v^4 \text{ (the known form),}$$

$$C' = (u^2 \sim v^2)^2 + 3(UV)^2 = A'^2 + 3B'^2 \text{ (the second form)}$$

$$= (A' \sim B')^2 + (3B')(A \sim B') + (3B')^2$$

$$= x^2 + xy + y^2, \text{ suppose.}$$

Hence  $2C'^2 = x^4 + y^4 + z^4$ , where  $z = x + y$ , and

$$x = A' \sim B' = (u^2 \sim v^2 - uv), \quad y = 2uv, \quad z = (u^2 \sim v^2 + uv).$$

This solves  $u^8 + v^8 + w^8 = x^4 + y^4 + z^4$ .

It remains to be shown that the above values of  $u, v, w, x, y, z$  also satisfy the second condition. Since  $w^2 = u^2 + v^2$ ,

$$u^4 + v^4 + w^4 = 2(u^4 + u^2v^2 + v^4) = 2C = 2C',$$

and  $2C' = 2(x^2 + xy + y^2) = x^4 + y^4 + z^4$ , where  $z = x + y$ . Hence  $u^8 + v^8 + w^8 = x^4 + y^4 + z^4$ , as required.

Ex. 1.—Take  $t = 1, u = 2$ ; whence  $u = 3, v = 4, w = 5; A' = 7, B' = 12; x = -5, y = 24, z = 19$ .

Ex. 2.—Take  $t = 3, u = 2$ ; whence  $u = 5, v = 12, w = 13; A' = 119, B' = 60; x = 59, y = 120, z = 179$ .

**16195.** (Professor COCHEZ.)—Discuter le genre et la variété des courbes  $x^2(2-h) - 2xy + y^2 - hx - 2y + 4 - h = 0$  pour toutes les valeurs réelles du paramètre  $h$ .

*Solution by C. M. ROSS.*

The following table supplies the information required :—

Curve.	Condition.
Ellipse	$1 < (2-h)$ which gives $h < 1$ .
Parabola	$1 = 2-h$ ,, $h = 1$ .
Hyperbola	$1 > 2-h$ ,, $h > 1$ .
Rectangular hyperbola	$2-h+1 = 0$ ,, $h = 3$ .
Two straight lines, real or imaginary	$\Delta = 0$ or $9h^2 - 12h + 8 = 0$ , which gives $h = \frac{2}{3} (3 \pm \sqrt{3})$ .

The above are true for all real values of  $h$ .

**16278.** (W. J. GREENSTREET, M.A.)—Three inelastic particles of unequal masses and velocities approach from different directions, impinge, and coalesce. Find the loss of energy.

*Solution by N. KUPPUSWAMI, B.A.*

If  $u$  and  $v$  and  $w$  be the velocities of the compound body after impact along any three directions at right angles to one another, since the momentum in any direction remains the same before and after impact,

$$\text{we have } \Sigma m_1 u_1 = (\Sigma m_1) u, \quad \Sigma m_1 v_1 = (\Sigma m_1) v, \quad \Sigma m_1 w_1 = (\Sigma m_1) w;$$

$$\text{therefore } (\Sigma m_1)^2 (u^2 + v^2 + w^2) = \Sigma (\Sigma m_1 u_1)^2;$$

therefore energy after impact is  $[\Sigma (\Sigma m_1 u_1)^2] / 2\Sigma m_1$ . Energy before impact is  $\frac{1}{2} \Sigma m_1 (u_1^2 + v_1^2 + w_1^2)$ , and we know energy is always lost by impact; therefore the loss of energy is

$$\frac{1}{2} \{ \Sigma m_1 (u_1^2 + v_1^2 + w_1^2) - [\Sigma (\Sigma m_1 u_1)^2] / \Sigma m_1 \}.$$

**16371.** (M. S. NARAYANA, M.A.)—Show that

$$5^n - \frac{n \cdot 5^{n-2} \cdot 6}{1!} + \frac{n(n-3)}{2!} 5^{n-4} \cdot 6^2 - \frac{n(n-4)(n-5)}{3!} 5^{n-6} \cdot 6^3 + \dots = 2^n + 3^n.$$

*Solution by T. K. VENKATARAMAN, M.A., C. M. ROSS, and others.*

If  $a + \beta = p$ , and  $a\beta = q$ ,

$$(2 - px) / (1 - px + qx^2) \equiv 1 / (1 - ax) + 1 / (1 - \beta x).$$

Expand each side in ascending powers of  $x$  (see Chrystal's *Algebra*, Chap. xxvii.), we have

$$2 + \Sigma \left( p^n - \frac{n}{1!} p^{n-2} q + \frac{n(n-3)}{2!} p^{n-4} q^2 - \dots + (-1)^n \frac{n(n-r-1) \dots (n-2r+1)}{r!} p^{n-2r} q^r + \dots \right) x^n \equiv 2 + \Sigma (a^n + \beta^n) x^n.$$

Comparing the coefficients  $x^n$ ,

$$a^n + \beta^n = p^n - \frac{n}{1!} p^{n-2} q + \frac{n(n-3)}{2!} p^{n-4} q^2 - \dots + (-1)^n \frac{n(n-r-1) \dots (n-2r+1)}{r!} p^{n-2r} q^r \dots$$

Put  $a = 3, \beta = 2$ .  $2^n + 3^n =$  the given series.

**9346.** (Professor NEUBERG.)—Soit, dans le plan d'un triangle ABC, un point D tel que les droites joignant A, B, C respectivement aux centres des cercles BCD, CAD, ABD concourent en un même point E. Démontrer (1) que la droite joignant D au centre du cercle ABC passe par E; (2) qu'entre les angles A, B, C du triangle ABC et les angles BDC =  $\alpha$ , CDA =  $\beta$ , ADB =  $\gamma$  il existe la relation

$$\begin{vmatrix} 1 & \cot A + \tan \alpha & \cot A \tan \alpha \\ 1 & \cot B + \tan \beta & \cot B \tan \beta \\ 1 & \cot C + \tan \gamma & \cot C \tan \gamma \end{vmatrix} = 0.$$

*Solution by C. E. YOUNGMAN, M.A.*

Let L, M, N, O be the centres of the circles BDC, ..., ABC. Then OL, OM, ON and MN, NL, LM are perpendicular to BC, CA, AB and AD, BD, CD respectively, and part (1) is a case of the general proposition that when any two triangles ABC, LMN have a centre of perspective E, and also centres of orthology O and D, these three centres lie in one line, perpendicular to the axis of perspective PQR. To prove this, draw EQ', ER', parallel to NL, LM, cutting CA, AB at Q', R'; this will evidently give

Q'R' parallel to QR. Find U, V the orthocentres of DCA and DAB, and let AU, AV cut BE, CE at M', N'; this will make M'N' parallel to MN, that is, to BV or CU. Consequently M'N' is the Pascal line of the hexagon BECUAV; hence the rectangular hyperbola ABCDUV goes through E, and will cut EQ', ER' at H', H'' the orthocentres of BDE, CDE. Consider then the hexagon CABH'E'H''; BH' and CH'' must meet on its Pascal line Q'R'; therefore Q'R' is parallel to BH' and CH'', that is, perpendicular to DE. Thus DE is perpendicular to PQR; and likewise also OE; so that O, D, E are collinear. (For other proofs, see the *Mathematical Gazette*, Vol. II., p. 125.)

Another figure, of course, must be used for part (2), in which

$$\angle LBC = \angle CB = \alpha - 90^\circ,$$

and the distances of L from CA and AB are  $LC \cos(C + \alpha)$  and  $LB \cos(B + \alpha)$ ; but  $LB = LC$ ; therefore the condition that AL, BM, CN meet at a point is

$$\cos(C + \alpha) \cos(A + \beta) \cos(B + \gamma) = \cos(B + \alpha) \cos(C + \beta) \cos(A + \gamma) \dots (a).$$

This being worked out agrees with the proposed equation, but fails to account for the determinant form of it.

Write  $\theta, \phi, \psi$  for the angles MDN, NDL, LDM. Then  $\theta = A + L$  and  $\beta = N + L$ ; therefore  $A + \beta = N + \theta$ , and so on; therefore (a) can be written

$$\cos(M + \psi) \cos(N + \theta) \cos(L + \phi) = \cos(L + \psi) \cos(M + \theta) \cos(N + \phi).$$

This then is the condition that lines joining L, M, N to the images of D (in MN, NL, LM) should meet at a point; hence (a) tells us that lines joining A, B, C to the images of D (in BC, CA, AB) also meet at a point. This property leads conveniently to the equation of the locus of D; for, if  $\alpha, \beta, \gamma$  be the trilinear co-ordinates of D, those of its image in BC are  $-\alpha, \beta + 2\alpha \cos C, \gamma + 2\alpha \cos B$ ;

hence the concurrence requires

$$(\beta + 2\alpha \cos C)(\gamma + 2\beta \cos A)(\alpha + 2\gamma \cos B) = (\gamma + 2\alpha \cos B)(\alpha + 2\beta \cos C)(\beta + 2\gamma \cos A).$$

On reduction this gives

$$\alpha(\beta^2 - \gamma^2)(\cos A - 2 \cos B \cos C) + \dots + \dots = 0,$$

proving that the line joining D to its isogonal  $D'$  is always parallel to OH, the Euler line of ABC. Now it may readily be proved that, if  $L'$  is the centre of the circle  $BD'C$ , the lines  $AL, AL'$  are isogonal in A, and hence that the point  $E'$  arising from  $D'$  is the isogonal of E; and  $DE, D'E'$  meet at O by part (1); therefore  $DE'$  and  $D'E$  meet at H (the isogonal of O); therefore  $DD'$  and  $EE'$  divide OH harmonically; therefore  $EE'$  bisects OH; hence the locus of E is the cubic

$$\alpha(\beta^2 - \gamma^2)(\cos A + 2 \cos B \cos C) + \dots + \dots = 0.$$

**16322.** (Professor SANJANA, M.A.)—A triangle PQR has its base resting on two fixed axes in its plane, and its sides PQ, PR passing through fixed points: if the ratio of PQ to PR be constant, prove that the locus of the vertex P is a curve of the sixth degree, and find when this curve degenerates into one of a lower degree.

*Solution by MAHENDRA NATH, D.E., M.A., B.Sc.*

Taking the fixed axes as the axes of co-ordinates, let the co-ordinates of P be  $\alpha, \beta$ , and those of the fixed points A, B ( $x_1, y_1$ ), ( $x_2, y_2$ ), respectively.

Then, from similar triangles,

$$PQ^2/PA^2 = \alpha^2/(\alpha - x_1)^2;$$

therefore  $PQ^2 = PA^2 \cdot \alpha^2/(\alpha - x_1)^2 = \alpha^2 [(a-x_1)^2 + (\beta - y_1)^2 + 2(a-x_1)(\beta - y_1) \cos \omega]/(\alpha - x_1)^2$  (where  $\omega$  is the angle between the axes).

Similarly,

$$PR^2 = \beta^2 [(a-x_2)^2 + (\beta - y_2)^2 + 2(a-x_2)(\beta - y_2) \cos \omega]/(\beta - y_2)^2;$$

therefore, if  $PQ/PR = e$ , the locus of P is

$$\alpha^2 (\beta - y_2)^2 [(a-x_1)^2 + (\beta - y_1)^2 + 2(a-x_1)(\beta - y_1) \cos \omega] = e^2 \beta^2 (a-x_1)^2 [(a-x_2)^2 + (\beta - y_2)^2 + 2(a-x_2)(\beta - y_2) \cos \omega],$$

which is of the sixth degree in  $\alpha, \beta$ .

The curve degenerates into one of a lower degree when  $e = 1$ , as the terms of the highest degree then cancel one another.

In the particular case when AB is parallel to QR, the locus reduces to  $\alpha^2 (\beta - y_2)^2 = \beta^2 (a-x_1)^2$ , which is of the third degree in  $\alpha, \beta$  and represents a straight line and a conic.

**16347.** (T. STUART, M.A., D.Sc.)—Why is it that the factors of  $N_1 = (x + y)^6 - 45x^4y^2 - 18x^2y^4$  are always of the form  $M(18) \pm 1$ ? Prove rigidly, for all values of  $x$  and  $y$ , that the expression

$$N_2 = x^6 + 20x^3y^3 + y^6 - 3xy(x^4 + y^4) - \frac{1}{2}x^2y^2(x^2 + y^2)$$

is always composite, and find the form of the factors.

*Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.*

The first question requires some limitation, viz., (1)  $x, y$  should be mutually prime; (2)  $(x + y)$  should be prime to 3 (otherwise  $N_1$  will contain 9). With these limitations (and  $x, y$  both integers)

$$(x + y)^6 + 1 \pmod{9}, \text{ always.}$$

Hence  $N_1 \equiv +1 \pmod{9}$ , always; whence  $N_1 \equiv \pm 1 \pmod{18}$ , always.\*

\* The Proposer remarks that this, however, does not prove that the factors are of the same form.

ii. Let  $N_2 = X, Y$ . Here each of  $X, Y$  must evidently be symmetric in  $x, y$ . Assume

$$X = x^4 + Ax^3y + Bx^2y^2 + Axy^3 + y^4, \quad Y = x^2 + Cxy + y^2.$$

Then  $N_2 = x^6 + y^6 + (A + C)xy(x^4 + y^4) + (B + 1 + AC)x^2y^2(x^2 + y^2) + (2A + BC)x^3y^3.$

Identifying this with the given expression

$$A + C = -3, \quad B + 1 + AC = -\frac{1}{2}, \quad 2A + BC = 20.$$

Eliminating B, C gives  $2A^3 + 12A^2 - 3A - 11 = 0$ , whence  $A = 1$  (the only rational root). Hence  $B = -\frac{3}{2}, C = -4$ . Hence

$$N_2 = (x^2 - 4xy + y^2)(x^4 + x^3y - \frac{3}{2}x^2y^2 + xy^3 + y^4).$$

*Note.*—Mr. Blaikie also calls attention to the necessity of restricting the values of  $x$  and  $y$ .—ED.

The PROPOSER'S Solution is as follows:—

(a)  $N_1 = (x + y)^6 - 45x^4y^2 - 18x^2y^4 = x^6 + 6x^5y - 30x^4y^2 + 20x^3y^3 + 15x^2y^4 - 12xy^5 + y^6 = (x^2 + y^2 - 4xy)^3 - 9(x^2 - 2xy)^2(y^2 - 2xy) = (X + Y)^3 - 9X^2Y,$

where  $(X, Y) = (x^2 - 2xy, y^2 - 2xy).$

Writing in this  $(X, Y) = (2t + u, t - u),$

it gives  $N_2 = 9(u^4 - t^3 + 3tu^2).$

But Sylvester (*Amer. Jour. of Math.*, Vol. II., p. 282) has shown that the cubic form  $x^3 - 3x \pm 1$  contains no prime factors other than 3 or of the form  $18n \pm 1$ . Hence the prime factors of  $N_1$  are of the same form.

(b)  $N_2 = (x^2 + y^2)^3 - 3xy(x^2 + y^2)^2 - 2^2xy(x^2 + y^2) + 26x^3y^3 = (x^2 + y^2 - 4xy) [(x^2 + y^2)^2 + xy(x^2 + y^2) - \frac{1}{2}x^2y^2] = [(x - 2y)^2 - 3y^2] [(x^2 + y^2 + \frac{1}{2}xy)^2 - 3(\frac{3}{2}xy)^2].$

Hence the prime factors of  $N_2$  are either 3 or powers of 3 or of the form  $M(12) \pm 1$ .

*Note.*—The *a priori* reason why  $N_2$  must be composite depends on the fact that (1)  $2N_2$  is expressible as the sum of two cubes, (2)  $N_2$  being  $\equiv (x^2 + y^2 - xy)^3 - 54 \frac{1}{2} [xy(x - y)]^2$ , can never be a cubic residue of 2, as the equation  $xy(x - y) = 2z^3$  is insoluble; (3)  $N_2$  is either a multiple of 3 or of the form  $M(18) \pm 1$ . It then follows, by a well known theorem of Sylvester's (*l.c.*, pp. 280, 281), that  $N_2$  cannot be prime.

**16360.** (JAMES BLAIKIE, M.A.)—If in an acute-angled triangle a point is taken in each side the same distance from its mid-point as the foot of the altitude but in the opposite direction, prove that the perpendiculars drawn to the sides at these points are concurrent, and find the relation between the angles of the triangle in order that the point of concurrence may be within the triangle.

*Solution by Professor SANJANA, M.A.*

If P, O be the ortho-centre and circumcentre, D, E, F the feet of perpendiculars, X, Y, Z the mid-points, then if PO be produced its own length to  $P_1$  and the perpendiculars  $P_1D_1, P_1E_1, P_1F_1$  be drawn, it is evident that

$$XD_1 = XD, \quad YE_1 = YE, \quad ZF_1 = ZF;$$

this proves the first part.

The point shall be within the triangle when none of the distances  $P_1D_1, P_1E_1, P_1F_1$  is negative. Now

$$P_1D_1 = 2OX - PD = 2R \cos A - 2R \cos B \cos C = 2R (\sin B \sin C - 2 \cos B \cos C);$$

this is positive if  $\tan B \tan C > 2$ . So also  $\tan C \tan A, \tan A \tan B$  should be greater than the same value. [Rest in Reprint.]

QUESTIONS FOR SOLUTION.

**16336.** (Correction by the Proposer.)—On the left of the first and second equations delete respectively the  $y$  and the  $x$  of the numerator.

**16400.** (H. C. KENT, B.Sc.)—Find the period of vibration of a dynamical system, possessing one degree of freedom, the equation of motion of which is  $a\ddot{\theta} + 2h\dot{\theta} + b\theta + \sin 2\theta = 0$ .

16401. (D. EDWARDES, B.A.)—Prove that

$$\int_{-1}^1 \frac{P_n(x)}{(z-x)^4} dx = \frac{2^{\frac{1}{2}}}{2n+1} [z-(z^2-1)^{\frac{1}{2}}]^{n+4},$$

where  $n$  is an integer and  $P_n(x)$  Legendre's polynomial of the first kind.

16402. (Professor NANSON.)—If  $u_1, u_2, \dots, u_n, v$  are  $n+1$  quadratic functions of  $x$ , show that the value of

$$\int \frac{u_1, u_2, \dots, u_n}{v^{n+1}} dx$$

is algebraic, provided  $v$  is harmonically related to one of the  $u$ 's.

16403. (Professor R. W. GENESE, M.A.)—Prove the following deductions from a theorem by Abel, viz.,

$$(1) \quad \phi(x+a) = \phi(x) + a\phi'(x+b) + \dots + \frac{a(a-nb)^{n-1}}{n!} \phi^n(x+nb) + \dots,$$

$$(2) \quad \phi(x) = \phi(x+b) - b\phi'(x+2b) + \dots + \frac{(-nb)^{n-1}}{n!} \phi^{n-1}(x+nb) + \dots$$

16404. (C. M. ROSS.)—Solve the equation

$$D \equiv \begin{vmatrix} \cos \theta & 1 & 0 & 0 & \dots & 0 \\ 1 & 2 \cos \theta & 1 & 0 & \dots & 0 \\ 0 & 1 & 2 \cos \theta & 1 & \dots & 0 \\ \dots & \dots & \dots & \dots & \dots & \dots \\ & & & & 1 & 2 \cos \theta & 1 \\ & & & & 0 & 1 & 2 \cos \theta \end{vmatrix} = 0.$$

where  $D$  is an  $n$ -th order determinant.

16405. (R. F. DAVIS, M.A.)—Solve the equation

$$(2x+1)(x^2+1)^2 + 4x^4 = 0.$$

16406. (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Show that the sum (to  $n$  terms) of any powers of the natural numbers may be expressed as a function of  $n$ , and of the powers of the odd numbers only.

16407. (Professor ESCOTT.)—The solutions of the equation

$$T_n^2 - 2U_n^2 = (-1)^n$$

form two recurring series

$$T_n = 1, 1, 3, 7, 17, \dots, \quad U_n = 0, 1, 2, 5, 12, \dots,$$

whose scale of relation is  $u_{n+2} = 2u_{n+1} + u_n$ . Factor completely  $U_n$ , a number of 32 digits.

16408. (T. STUART, M.A., D.Sc.)—Investigate a general method of solving in integers the equation  $x^3 = y^2 + a$ , and exhibit your method by examining the cases  $a = 107, 146, 207$ . Show that there are at least six solutions when  $a = -17$ , and give an elementary but rigid proof that the equation is impossible for  $a = 17$ , or  $-7$ . Is the equation possible when  $a = -127$ ? [The case when  $a = 17$  has been already fully discussed by Gérons, de Jonquières, and S. Realis; *N. Ann.*, 1877, 1878, 1883.]

16409. (R. W. D. CHRISTIE.)—Two sums of equal value were invested in two assurance companies for the same period. The ratio between the interest on the collective instalments at the end of the period and that on the whole sum invested for the whole period in the two companies bore the proportion of 16 to 17. Required the number of instalments in each company, supposing the interest to be the same. Generalize the theorem.

16410. (H. L. TRACHTENBERG, B.A.)—Prove that the centres of a system of conicoids having a common curve of intersection lie on a line, provided that part of the common curve is a conic at infinity.

16411. (M. T. NARANIENGAR, M.A.)—Similar segments of circles are described on the radii vectores of a curve, show that their envelope is similar to the first positive pedal.

# HYGIENIC SCHOOL FURNITURE

MADE ON SCIENTIFIC PRINCIPLES.

## The "STANTON" DESK. The "FARRINGDON" ADJUSTABLE DESK.

As supplied for the use of

H.R.H. PRINCE EDWARD OF YORK and  
H.R.H. PRINCE ALBERT OF YORK

both at Marlborough House and Sandringham.

*This Desk has many special features:—*

1. It is made entirely of wood.
2. The Desk is fitted with chair seat.
3. The centre back rail is curved inwards and the upper back rail is curved outwards, so that the maximum of support is given to both the hollow of the back and the shoulders.
4. This Desk can also be fitted with a sliding pad for the back.
5. Very strongly made with dove-tailed corners.

The Locker of each of the above-mentioned Desks is made to slide backwards and forwards, allowing the edge of the Desk to be vertically over the edge of the seat when the Pupil is writing, or leaving sufficient space for the Pupil to stand comfortably.

**THESE DESKS PREVENT SCHOLARS ASSUMING ANY HARMFUL ATTITUDE.**

*Every Article of School Furniture manufactured at the Steam Factory, Stevenage.*

Laboratories have been recently fitted by the E.S.A. at Dulwich College and Charterhouse School.

*ILLUSTRATED CATALOGUE FREE ON APPLICATION.*

{Published Monthly, price, to Non-Members, 6d.; by Post, 7d. Annual Subscription, 7s.

### COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

#### MEMBERS' MEETING.

The next Monthly Meeting of the Members will take place on Wednesday, the 13th of May, at 7.30 p.m., when Dr. HUBERT E. J. BISS will read a Paper on "School Life and Healthy Growth."

A discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

#### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 31st of August, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in May.

**Certificate Examinations.**—The Midsummer Examination for Certificates will commence on the 30th of June, 1908.

**Lower Forms Examinations.**—The Midsummer Examination will commence on the 30th of June, 1908.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Autumn Examination in 1908 will commence on the 8th of September.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

#### LECTURES FOR TEACHERS.

A.—The First Course of Lectures (Thirty-six Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on "The Application of Psychology to the Work of the School," commenced on Thursday, February 13th, at 7 p.m.

The Course is meant to meet the needs of Teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the classroom. The Fee for the Course is Half-a-Guinea. The Lectures are delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

For syllabus, see page 198.

C. R. HODGSON, B.A., Secretary.

Bloomsbury Square, W.C.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Hours for interviews (preferably by appointment):—

11 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

## THE JOINT SCHOLASTIC AGENCY.

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies:—

HEAD MASTERS' CONFERENCE.

INCORPORATED ASSOCIATION OF HEAD MASTERS.

COLLEGE OF PRECEPTORS. TEACHERS' GUILD.

INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

ASSOCIATION OF TECHNICAL INSTITUTIONS.

ASSOCIATION OF PREPARATORY SCHOOLS.

WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION.

Interviews (preferably by appointment) 12 p.m.-1.30 p.m., and 3 p.m.-5.30 p.m. Saturdays, 12 p.m.-1 p.m.

is now ready, and may be obtained from Mr. F. HODGSON, 89 Farringdon Street, E.C. Price, free by post.

To Members of the College ... 1s. 6d.

To Non-Members ... 2s. 6d.

The Calendar contains, in addition to the Lists of Members, and of Schools sending in candidates to the Certificate Examinations, the Regulations respecting the Examinations to be held in 1908, &c., and the

**EXAMINATION PAPERS**

set at the Certificate, Lower Forms, Professional Preliminary, and Diploma Examinations held in 1907.

**Messrs.**  
**TRUMAN & KNIGHTLEY,**

**Educational Agents,**

**6 HOLLES ST., CAVENDISH SQUARE,**  
**LONDON, W.**

Telegrams — "TUTORESS, LONDON."  
Telephone—No. 1167 Mayfair.

*This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.*

**A.—EMPLOYMENT DEPARTMENT.**

(i.) **ASSISTANT MASTERS & TUTORS.**

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) **ASSISTANT MISTRESSES.**

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) **LADY MATRONS AND HOUSE-KEEPERS.**

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Prospectus, References, and full particulars will be forwarded on application.

## SCHILLING'S SPANISH GRAMMAR.

Translated and Edited by FREDERICK ZAGEL.

"I have carefully read over Schilling's 'Spanish Grammar,' and I find it to be a good practical book. The rules are clearly enunciated. The irregular verbs are grouped so that their points of agreement and difference are visible at a glance. The exercises, which constitute the bulk of the book, are so arranged as to gradually familiarize the student with the chief syntactical rules and the most commonly recurring idiomatic expressions: they are specially adapted to draw out conversational power. The dialogues are most happily selected, and a most useful addition to this part of the book. The whole work is admirably adapted both for school classes and for self-instruction."—RICARDO RAMIREZ, *Professor of the Spanish Language and Literature at King's College, London; Examiner to the Society of Arts, London Chamber of Commerce, Law Society, &c.*

BY THE SAME AUTHOR AND TRANSLATOR.

Crown 8vo, 164 pages, price 2s. 6d.

## SCHILLING'S "DON BASILIO."

A Practical Guide to Spanish Conversation and Correspondence.

"This volume was written by Prof. Schilling as a companion reading-book to his excellent 'Spanish Grammar.' The first part (89 pages) consists of a series of dramatic dialogues in which Don Basilio, 'a bachelor and professor of languages' on holiday, figures variously enough to exemplify conversation under all ordinary circumstances. The talk is always bright—there is not a dull page in the Part; and any student that works through it carefully is bound to acquire an excellent working command of Spanish conversation. The second Part (66 pages) gives 100 examples of private and business letters and forms, together with lists of abbreviations, styles of address, modes of concluding a letter, &c., and a vocabulary. The volume is an admirable *mutum in parvo*. The selection and disposition of materials must have been a prolonged and exacting labour, by which the student will largely profit."—*Educational Times*, Jan., 1908.

## COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, W.C.

## Lectures for Teachers

ON THE

## SCIENCE, ART, AND HISTORY OF EDUCATION.

## THE APPLICATION OF PSYCHOLOGY TO THE WORK OF THE SCHOOL.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The First Course of Lectures (Thirty-sixth Annual Series) commenced on Thursday, February 13th, at 7 p.m.

The Course is meant to meet the needs of teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connection with the examinations for the Associateship, the Licentiate'ship, and the Fellowship. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the classroom.

## SYLLABUS.

I. (Feb. 13.) *Nature and scope of Psychology*: border-land between physiology and psychology; characteristics of consciousness: the psychological attitude of mind: the teacher's use of psychology: Professor Munsterberg's view: the intermediary between psychology and education: genetic psychology: experimental methods: child study.

II. (Feb. 20.) *Consciousness*: its fundamental character: its polarity: its insulation: "the general consciousness": the ego or self: the subjective and objective: the unity of individual consciousness: meaning of the subconscious: advantageous position of educator as external influence.

III. (Feb. 27.) *Manipulation of Consciousness*: the various modes of being conscious: the so-called faculties: concentration and diffusion of consciousness: interest and attention: interaction between them: interest as means and as end: relation between the interesting and the easy: kinds of attention: physiological mechanism of attention.

IV. (March 5.) *Sense-perception*: nature of pure sensation: the senses, general and special: the essential mark of perception: the respective contributions of sensation and perception to knowledge: nature and scope of observation: its relation to inference: the gaping point: danger underlying the phrase "the training of the senses."

V. (March 12.) *Mental content*: the unit of mental content: the idea: laws of the interaction and combination of ideas: apperception: presented content and presentative activity: gradual modification of presentative activity: transitive and intransitive elements of thought: the static and dynamic view of the concept: the logical and psychological aspect of the concept.

VI. (March 19.) *Habit*: habit based on the laws of association: these laws not limited to ideas: association a general principle of organic development: place and value of habits in education: accommodation and co-ordination: the elimination of consciousness: convergent and divergent association: the continuum: reintegration.

VII. (March 26.) *Retention and recall*: physiological basis of memory: plasticity: memory not limited to intellectual process: personal identity: question of the possibility of improving the quality of memory: educational applications of mnemonics: learning by rote; obliviscence: element of purpose in memory.

VIII. (April 23.) *Imagination*: place of imagery in thinking: limitations imposed by images: importance of clearly imaged ends in ordinary life: practical applications in the schoolroom: the æsthetic imagination: cause of general suspicion of the "busy faculty": scientific uses of the imagination: exact meaning of "picturing out": relation of the imagination to the ideal.

IX. (April 30.) *Judgment and reasoning*: relation between logic and psychology: concept, judgment, reasoning correspond generally to term, proposition, syllogism: essential meaning of thinking is an adaptation of means to ends on the ideational plane: the purposive aspect of apperception: distinction between mere reintegration and thinking: the laws of thought as thought: the fundamental condition of all mental process: what underlies fallacies.

X. (May 7.) *Human nature*: general tendency to over-estimate the cognitive aspect: relation of knowledge to character: temperament the physical basis of character: classification of temperaments and of character types: advantages and dangers of such classifications: personality: permanency of temperaments and means by which they may be modified: types of troublesome pupils: treatment of the different temperaments in school.

XI. (May 14.) *The emotions*: value of the emotions in human life: like-sensations they are subject to the law of relativity: emotions are to be utilized, not eliminated: cause of popular depreciation of the emotions: emotions are to be regulated by ideas: classification of the emotions: their expression: Lanke-James theory of relation between emotion and its expression: element of truth in the theory and its great practical importance to teachers.

XII. (May 21.) *The will*: relation of will to feeling on the one hand and knowledge on the other: the appeal of the motive: fallacy of "the strongest motive": resolution of the dualism implied in the process of making up one's mind: metaphysical exercises obscuring the problem of the freedom of the will: the evolution of the will in its relation to desire: the possibility of the training of the will: fundamental importance of the time element in this training.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

**THE METRIC SYSTEM OF WEIGHTS AND MEASURES.** An Elementary Treatise. Crown 8vo, 2s.

# Cambridge University Press

**Chaucer. The Prologue and The Knight's Tale.** Edited, with Introduction, Notes, and Vocabulary, by M. BENTINCK SMITH, M.A.

Fcap. 8vo,  
2s. 6d.

Portions of the introduction have been written with a view to the teacher rather than the pupil, the editor's aim being to give in a concise form the materials which the teacher requires to have at his disposal if the taught are to obtain an adequate conception of Chaucer's importance in the history of English literature and language. A short bibliography containing a list of authorities has been appended.

**The Modern Language Review.** A Quarterly Journal devoted to the Study of Mediæval and Modern Literature and Philology. Edited by Prof. JOHN G. ROBERTSON, with the assistance of an Advisory Board.

Contents of Vol. III. No. 3, April, 1908.

Rabelais and Geographical Discovery. II. Jacques Cartier. By Arthur Tilley.  
"Earth upon Earth." By H. G. Fiedler.

Crown 8vo,  
10s. 6d.

The former editions have been favourably received among travellers, residents in outlying districts, schoolmasters, and the considerable class of people who have an indirect interest in botany and need some work of general reference in that subject. In the Third Edition Part II. has been slightly enlarged and to a great extent rewritten; while Part III. has been largely added to, with the view of bringing in all technical terms likely to be met with and Colonial and American names of plants.

**The New Testament in Greek,** according to the text followed in the Authorized Version, together with the Variations adopted in the Revised Version. Edited by F. H. A. SCRIVENER, M.A., D.C.L., LL.D.

The special design of this edition is to place clearly before the reader the variations from the Greek text represented by the Authorised Version of the New Testament which have been embodied in the Revised Version, the readings adopted by the revisers being printed at the foot of the page. The publication of such an edition appeared to be all the more desirable, inasmuch as the Authorised Version was not a translation of any one Greek text then in existence, and no Greek text intended to reproduce in any way the original of the Authorised Version had ever been printed.

This edition of the New Testament in Greek is now issued in two sizes, both on white paper and on India paper, at the following prices:—  
Foolscap 8vo, cloth, 3s. net (originally published at 4s. 6d.).  
Foolscap 8vo, printed on India paper, cloth, 4s. 6d. net.  
Crown 8vo, cloth, 3s. 6d. net (originally published at 6s.).  
Crown 8vo, printed on India paper, cloth, 5s. net.  
Both sizes may also be had in leather bindings.

## Books suitable for the OXFORD LOCAL EXAMINATIONS, 1909

### THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

With Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A.

**The Tempest.** Sixth Edition. 1s. 6d.

"Mr. A. W. Verity possesses learning, literary insight, and a facile pen. He has a knowledge of boys and sympathy with their difficulties; moreover, when writing for them he seldom loses himself in his subject to the extent of forgetting his audience. Consequently, as has been shown in these columns on more than one occasion, he is an almost ideal editor of school texts."—*Guardian*.

**Macbeth.** Fourth Edition. 1s. 6d.

"Seems to us to be an excellent text-book for the study of the play."—*Education*.

**King Henry the Fifth.** Fifth Edition. 1s. 6d.

"The school edition of the play."—*Guardian*.

**Macaulay. The Lays of Ancient Rome,** and other Poems. Edited by J. H. FLATHER, M.A.

Fcap. 8vo,  
1s. 6d.

"In thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."—*School World*.

**More's Utopia.** Edited, with Introduction, Notes, Glossary, and Index of Names, by J. RAWSON LUMBY, D.D.

Fcap. 8vo,  
2s.

"Edited, in a most complete and scholarly fashion, by Dr. J. R. Lumby, whose name alone is a sufficient warrant for its accuracy. It is a real addition to the modern stock of classical English literature."—*Guardian*.

**Scott. Quentin Durward.** Edited by W. MURISON, M.A.

Fcap. 8vo,  
2s.

"Mr. Murison's introduction is a model of what is necessary for the historically unlearned, and contains neither too much nor too little for the student."—*Aberdeen Free Press*.

**Scott. The Talsman.** Edited by A. S. GAYE, B.A.

Fcap. 8vo,  
2s.

"The Editor's introduction contains a short summary of the historical events on which the story is based. The five pages of Glossary give succinctly the meaning of all hard words."—*School Guardian*.

**Scott. The Lay of the Last Minstrel.**

Fcap. 8vo,  
2s.

Edited, with Introduction, Notes, and Glossary, by J. H. FLATHER, M.A.  
"It is one of the very best edited school texts ever placed before the public."—*Guardian*.

The Educational Times.

Educational Peace.

THE reception of the Bishop of St. Asaph's Bill in the House of Lords, though somewhat disappointing to eager hopes of compromise, has not been without effect on the embarrassed situation, and the suggestions of the measure are probably bearing fruit in a wider sphere. We hear of conferences of keen representatives of the most antagonistic contentions and demands. The changes in the Administration may render it easier for a fresh President of the Board of Education to handle the points of difference with a more elastic touch. Apparently almost everybody now accepts the two fundamental positions maintained by the victorious party at the General Election and necessarily governing the official educational policy—public control where public funds are provided and no tests for teachers. "Subject to that," said Mr. Winston Churchill at Manchester, no doubt advisedly, "some exceptional treatment might be given," which, if it means anything at all, means that the Government have an open mind on details. Evidently there must be some give-and-take if "an effective and harmonious settlement" is to be reached, and no other kind of settlement is worth reaching. "All great alterations in human affairs," said Sydney Smith, "are produced by compromise." And the saying is to be commended to extremists.

The contracting-out plan of the Government Bill is one obvious enough mode of dealing with exceptional cases. The unfortunate thing is that the exceptions are so large as against the rule, and the proposed manner of treating them is fairly capable of being construed either as a menace of their eventual extinction or at least as a permanent danger to efficiency. We have no doubt whatever that the proposals are honestly intended to relieve a difficult situation; but the practical outcome is not necessarily determined by good intentions, and there seems to be solid ground for the gravest doubt whether the results would work out satisfactorily either for the contracting-out parties or for the interests of education. The case of the Catholic schools furnishes one of the strongest illustrations. How could the Catholics of the London district, it is asked, "do for 47s. what is at present costing 75s.?" "Moreover," runs another

appeal, "your children will be deprived of all the advantages of the pupil-teacher system, of manual training, housewifery, swimming, and other centres, of scholarships, and the benefit of expert advice, for all of which you have to help to pay in your rates." This prospect faces 1,080 schools with 400,000 school places. We have already drawn attention to the weighty resolution of the N.U.T., passed by the Executive and endorsed by the Conference at Hastings, "condemning the contracting-out clauses of the Education Bill as vitiating fatally the principles of local public control and religious freedom for teachers, which the other clauses were intended to secure."

The Bishop's Bill has the advantage of association with the tendency to a national system; it would "provide for the establishment of one type of public elementary school under full public control." It requires religious teaching "during school hours"; but it leaves undenominational religious teaching to the control and the cost of the Local Education Authority, and it asks "facilities for denominational religious teaching on three days a week to those children whose parents desire such teaching for them, but no part of the cost is to be paid by the Local Education Authority." As for the teacher, "except in accordance with his wishes, no teacher shall be required to give any religious instruction," but every teacher is left "free to offer to give either simple Christian (Cowper-Temple) teaching or teaching distinctive of a particular denomination." It may be doubted whether this will satisfy the teachers: while providing in terms for their absolute freedom, it ignores the indirect influences that would always possibly, and perhaps probably, be present, and gives no security for such fair treatment as the Bishop intends to be exercised. Here again we must look beyond intentions to the probable operation of human nature in the particular case. We suspect it will be far from easy for Nonconformist spokesmen to moderate the intensity of their expressed objections to "facilities." Moreover, St. Asaph has to reckon with Birmingham. The Bishop of Birmingham declared that "that those of them who valued most the privilege of giving distinctive religious teaching to the children of those parents who desired such teaching through teachers who believed in it could not find in this Bill the prospect of a reasonable settlement." And why? "At present their stronghold was the position of the denominational schools,"

and they would not be justified "in surrendering that stronghold for the prospect of additional facilities," which, if allowed, would probably "be very little used." The argument is, in more ways than one, very remarkable; but it represents a more or less considerable barrier in the way of the Bishop of St. Asaph's Bill.

On one or the other of these two main lines—contracting-out or special facilities—the wiser leaders of the Church appear to be looking for a settlement. The 47s. is not a rigid figure; and facilities, on the despondent view of the Bishop of Birmingham, as well as on grounds more creditable to the religious feeling of the people, need not alarm the sincerest of Nonconformists. But, of course, facilities are of no use to the Catholics, who postulate absolutely a Catholic "atmosphere" for the teaching, and for all the teaching. As between the Church and the Government, perhaps the only real difficulty will lie in the single-school areas; and it is a very serious difficulty. The Nonconformist grievance has been frankly acknowledged, however; and it may be that a practical concession will give effect to the argumentative acknowledgment. In any case, the country cries aloud for educational peace.

### NOTES.

A VERY cordial welcome will be extended by teachers and educationists generally on this side to the American expedition of "five hundred or more public-school teachers to England, Scotland, Ireland, and the Continent for the inspection of schools and teaching methods," which is to reach these shores in detachments between September and February next. The American Advisory Committee is headed by President Butler, of Columbia, who is also Chairman of the Industrial Economics Department of the National Civic Federation, under whose auspices and direction the expedition is being planned. The National Civic Federation, we may remark, is "an organization for the betterment of the people and the practical discussion of questions of public utility," and "is deeply interested in the growing demand for trade and industrial education," believing, as it does, "that trade and industrial schools will sooner or later become a part of the American public-school system, and that possibly some readjustment of the general work of the schools will be necessary to meet new conditions." On this side of the water the lead for the reception of the visitors is being taken by Mr. Alfred Mosely, who has already secured a representative and influential committee and has initiated the formation of local committees in the principal towns throughout the country. Mr. J. Bruce Ismay, of Liverpool, will now, as before, prove his interest in the movement by generous practical arrangements for transport. A large proportion of the visitors will, of course, be ladies. We are quite sure that they will be received in the friendliest manner, that they will be afforded ready facilities for seeing everything that is likely to be useful to them or to interest them, and that British hospitality will render an uncalculated return for the kindness experienced by Mr. Mosely's parties in past years. The closer the personal touch, the better the mutual understanding and the more

sympathetic the relations between the two great English-speaking countries.

THE influential deputation from the Secondary Schools Association to the President of the Board of Education (April 3) did good service in two ways at least: it gave voice to the principal complaints about the Secondary Schools Regulations, and it afforded Mr. McKenna an opportunity of explaining how matters really stand. The first point was strongly put by Sir Philip Magnus, who "suggested that the Board of Education would derive considerable advantage by consulting those connected with secondary schools in regard to any such administrative changes, and asked that notice should be given of any changes of a serious character, and opportunity afforded for the discussion of any such changes while they were still in a provisional form." To this Mr. McKenna replied that "it so happened that this year, for the first time in the history of the Board's regulations, notice was given to the public, and opportunities were afforded for the discussion of the proposed changes, and very little criticism was offered upon them at the time." Here, then, is a lesson in promptitude of action; though it is to be remembered that it takes some time to collect opinion and to bring it to a focus for practical purposes. The second point—the administration of Article 20—was not pressed very closely either by Lord Shuttleworth or by Prof. Butcher; and Mr. McKenna frankly stated the limited extent of its actual application and illustrated roughly the general principle of the Board's action. He thought the deputation would find "that there was not a shred of evidence to support the statement that the Board was impairing the education of the country as to the 25 per cent. of free places." The third object was to urge the withdrawal of Article 44, which provides that no grants shall hereafter be payable in respect of schools not on the grant list for 1906-7. Prof. Butcher made two objections: (1) non-conforming schools did not get grants and inspection was withdrawn—"a most retrograde step"; and (2) diversity of type was discouraged—a "mischievous" thing, "dealing a very serious blow to English education." Mr. McKenna replied that "up to the present moment the Board had received no evidence that the Article had worked any inconvenience." And generally he laid stress on the fact that these regulations run only for the current, and can be amended for next year, the Board being quite open to criticisms and suggestions.

THE connexion between the primary and the secondary school was one of the most interesting and practically important questions discussed by the N.U.T. at their very successful Hastings meeting. On the point of age, Mr. J. Lewis Paton, of Manchester Grammar School, held that both psychological and practical considerations indicate twelve, or even earlier, as the right age for the break; and Mr. Lishman, the head of a Bradford Municipal Secondary School, contended that, "if scholarship children are to start on level terms with their schoolfellows in certain essential subjects, they must enter the secondary school at ten or eleven." Say, then, roundly: preparatory school, seven to twelve; secondary school, twelve to sixteen. Given this

division, Mr. Lishman foresees two natural and desirable results: "one would be the unification of the teaching profession, the establishment of free trade between the two domains of education, and the abolition of the hierarchy of snobbery which now too largely prevails; the other would be the humanizing of the preparatory-school curriculum." As to the mode of transference, Mr. Lishman affirms that it is at present "on an utterly false and unjust basis": it assumes that the object is to raise a fortunate few above their fellows rather than to raise the general level of culture; competitive examination, if unavoidable under existing conditions, yet puts a premium on precocity; and "the error is intensified by the want of correlation between the two types of schools." Mr. Paton suggests a classification of the children above Standard IV. in two Divisions: "in the A Division should be placed all the children who show brightness and intellectual promise"; the rest, in the B Division. But, of course, "any scheme depends for success on the people who work it." "Column B has been swept away: let it go, and with it all that it connotes: our interests are one and indivisible." Mr. Lishman pointed out that, "while last year there were 5,300,000 children in average attendance in the primary schools, there were only 90,000 taking the recognized four years' course in schools receiving grant from the Board of Education," and that "even if we double the latter number, so as to include those above the recognized course and those in schools not receiving grant, the disparity in the numbers is appallingly great."

THE "occasional correspondent," contributing an elaborate series of articles to the *Times* on his impressions of "A Year amongst Americans," deals with outstanding points in the American educational system. From his seventh article (April 20), we quote a sentence or two about private schools and their prospects:

The spirit of democracy, which is essential in this great Republic, is maintained by many of the institutions of the country, and especially by the public schools. There are many private schools for such families as prefer their exclusive ways; it is estimated that the number of children attending these is one-twelfth of the number in public schools, and that, I understand, is about the proportion which is to be found in England. But the significant fact is that there is a steady decrease in the number of private schools and in the number of pupils attending those that survive. Private high schools for a time showed greater vitality than private elementary schools; but even in these there has been a decrease of no less than 1,500 since 1902, in spite of an increasing population. The sceptre has passed from the private schools; and in the common schools, not only rich and poor, but also natives and immigrants, meet together on a footing of strict equality, taking their places according to what they are and not what they are called, each, under its undiscriminating rule, finding his natural level, wholly regardless of the conventional circumstances of life.

Is it to be inferred, then, that in this country also the spirit of democracy will militate against the private school? At any rate, its manifestations are neither so fast nor so furious as in the transatlantic Republic; nor should there be any real conflict between the principle and the institution.

A "MEMOIR on the Pigmentation Survey of Scotland," written by Mr. John Gray, B.Sc., of the Patent Office, and published by the Royal Anthropological Institute, of which Mr. Gray is the Hon. Secretary, is one of the most interesting and important records of the anthropometric movement. The survey was initiated by Mr. Gray and

conducted by him conjointly with Mr. J. F. Tocher, Secretary of the Buchan Field Club, under the auspices of a local Committee, assisted financially from the Royal Society Government Grant Committee; and he generously declares that "perhaps the greatest credit for carrying out this survey is due to the school teachers of Scotland"; for "without their co-operation the work could not have been done with the limited financial resources at the disposal of the Committee." The method of procedure is in alliance with, and is reinforced by, the investigations of Prof. Karl Pearson and Mr. Udny Yule. Elaborate statistical tables and a score of special maps are appended to the memoir of explanation. The conclusions (under reserves) are often very curious and interesting. Thus: "There is usually in large towns an immense difference between their pigmentation and that of the surrounding country." "Industrial towns, like Glasgow and Dundee, are unhealthy for the blonde type." "Urban conditions tend to increase the percentage of red hair among men, but does not perceptibly affect that among women"; and they appear to be "favourable to the survival of brown-haired men" and "dark-haired women" and dark eyes generally. Blue eyes commonly go with fair hair; but dark eyes do not always go with dark hair. Glasgow—a very mixed population—"shows an immense deviation from the normal, both on the hair- and on the eye-colour map." The historical deductions, if to be taken with caution, are extremely suggestive, and they are largely emphasized by the representations on the maps. The memoir must have cost enormous labour, and it shows remarkable results, which will, no doubt, gain increased importance from other results in the different branches of anthropometric inquiry.

SINCE the awakening of the Far East by the roar of cannon, many young Chinamen have been sent to the Universities of the East and of the West to equip themselves with modern learning for patriotic no less than for personal ends. Sir Frederick Lugard, the energetic Governor of Hong-Kong, however, proposes to provide for their educational needs nearer home. He thinks that the geographical position of his island adapts it remarkably well to be an educational centre—in fact, "the Oxford and Cambridge of the Far East." If Hong-Kong, then, could establish a University offering facilities of an adequate character, why should it not attract a large number at least of the Chinese students that are now flocking to Japan, America, Great Britain, and the Continent of Europe? Why not bring modern learning to Hong-Kong? The idea has commended itself to Mr. H. N. Mody, a Parsee bill and bullion broker, an old citizen of the Colony, who has offered to place at his Excellency's disposal the handsome sum of 150,000 dollars, say £15,000. Even for a modest beginning, however, there would be required something like £100,000, or a yearly income of £6,000. Sir Frederick has held a public meeting on the subject and appointed a committee of inquiry to draw up reasonably precise data. The co-operation of Chinese and Europeans is invited. The Government will, no doubt, grant a suitable site; at any rate, Sir Frederick will make the recommendation. Meantime, all honour to Sir Frederick and to Mr. Mody and all success to the undertaking!

## SUMMARY OF THE MONTH.

FOLLOWING is the official suggestion of the scope and plan of the projected visit of Canadian and American teachers to the United Kingdom during the coming autumn and winter:—

1. The teachers are expected to arrive in a succession of small parties between September next and February, 1909, and will visit the principal cities and towns of the United Kingdom, investigating more particularly our primary, secondary, and technical education, manual training, and the training of teachers.

2. For this purpose they will see most of the great colleges and Universities, the principal technical institutions and polytechnics, the great public schools such as Eton, Rugby, Winchester, &c., and the preparatory schools in connexion therewith; the county schools, municipal secondary schools, colleges for girls, schools for co-education, training colleges, and schools of art. A certain number will also wish to examine into special branches of education, such as agricultural and mining colleges, reformatory schools, schools for adults and defectives, and domestic economy schools.

3. The chief centres will be London, Birmingham, Cardiff, Liverpool, Leeds, Manchester, Newcastle, Sheffield, Edinburgh, Glasgow, &c.

4. The investigations will be made under arrangements with the Local County and other Authorities concerned, and the teachers will be taken charge of by Reception Committees, headed by the mayors and other influential residents in the respective districts and education officials; with the active assistance of most of the large body of British teachers who visited America during the winter of 1906-7. The latter especially have expressed their desire to do all in their power to reciprocate the kindness shown them on the other side of the Atlantic, and to make the stay of our visitors both profitable and interesting.

ABOUT a year ago the Board of Education requested its Consultative Committee to consider and advise the Board what methods are desirable and possible, under existing legislation, for securing greater local interest in the administration of elementary education in administrative counties by some form of devolution or delegation of certain powers and duties of the Local Authority to district or other strictly local Committees. The Committee has reported to the Board, and the report has been published (Cd. 3952). A prefatory memorandum states that the findings of the Committee are under the consideration of the Board, and that the report has been published to provide information in view of the discussion arising out of the Bill recently introduced in the House of Commons to secure compulsory devolution. The Consultative Committee has arrived at certain general conclusions which should prove of value in assisting intelligent action. Every Education Committee, it is suggested, should, so far as existing powers go, secure as managers of schools the services of persons familiar with the educational needs of the locality and likely to be regarded with confidence and sympathy by parents, teachers, and the Education Authority. At the same time, there are certain duties requiring a wide outlook and broad educational experience which, the Committee thinks, should be reserved by the Authority itself. A certain number of counties exist which might with advantage create some form of local Sub-Committees and delegate to them duties appropriate to their needs and circumstances. It is very important to notice that the Consultative Committee states that it would be difficult, if not impossible, to devise any uniform system which would give general satisfaction throughout the country. It would be fatal to efficiency if a parochial spirit became predominant in the administration of education. It is desirable by all means to encourage an interest in educational matters in all districts by every legitimate means; but every step must be taken to ensure that the supply of efficient education in every locality is a national matter which must not be left at the mercies of local prejudices.

A BILL to establish compulsory continuation schools in England and Wales, and to amend the Education Acts of 1870 and 1902 in respect of the age of compulsory school attendance, has been introduced in the House of Commons by Mr. Chiozza-Money. In introducing the Bill, Mr. Chiozza-Money said that, according to the last census, there were in England and Wales 5,000,000 youths of both sexes between the ages of fifteen and twenty-one, and of these not more than 400,000 were receiving any measure of systematic training. This does not include the children of the upper and middle classes, but, if 400,000 be added, the extraordinary conclusion is arrived at that, out of 5,000,000 young people between fifteen and twenty-one years of age, only 800,000 continue training after leaving the elementary schools. The

practical result is that untrained boys and girls drift into the ranks of the incompetent, the unskilled, and the unemployed. The Bill abolishes all partial or total exemptions of boys and girls under fourteen years of age. It abolishes half-timers, making fourteen years the lowest age at which a boy or girl might leave an elementary school. A continuation scholar is defined as a boy between the ages of fourteen and seventeen, and a girl between the ages of fourteen and sixteen. The Bill makes it the duty of the Education Authority to establish continuation schools, with technical classes, and the attendance of continuation scholars is made compulsory on the parent and the employer. The hours of attendance would be six per week, spread over one, two, or three days. The cost of carrying out the provisions of the Bill would be defrayed out of money voted by Parliament.

THE accounts for the year ending July 31, 1907, of the various London polytechnics show that the total ordinary receipts of all the institutions amounted for the year to £203,952. The grants of the London County Council amounted to £77,358, or 37·93 per cent. of the total receipts. Grants from the Board of Education reached £32,844, or 16·11 per cent.; the amounts received from City Parochial Foundation were £28,330, or 13·89 per cent., and from City companies, &c., £5,917, or 2·90 per cent. The total ordinary expenditure on revenue account of all the institutions amounted to £207,519. Large increases occurred under two heads, viz., "teachers' salaries," £10,317, and "apparatus and other educational appliances and furniture," £3,116. Taking the results as shown by the accounts, it is seen that, so far as ordinary income and expenditure are concerned, there was a deficit of £3,567 on the institutions as a whole. With regard to items of an exceptional nature—principally new building works and special equipment—the total income was £15,089, of which the London County Council's grants amounted to £9,401, and the expenditure was £9,113. Of the total amount of revenue, it is interesting to note that the fees of students and members of the various polytechnics amounted in all to £47,255, or 21·57 per cent., and what are called in the accounts voluntary subscriptions reached £9,161, or 4·18 per cent., nearly twice as much as in the previous year, though other percentages were practically the same in both years.

At a meeting of the Birmingham Branch of the Association of Teachers in Technical Institutions (April 11), Dr. Slater Price read a paper on the Birmingham Technical School, sketching the growth of the school and its various departments. "It was impossible (he said) to give an estimate of the effect of the Technical School on the industries of the district. It was often said that the object of Birmingham University was to train the future captains of industry, but the Technical School had already trained, and would train in the future, a large number of such captains. In the session 1905-6 (he continued) the school made a departure in that it advertised classes for degrees in science and engineering of the University of London. The more advanced classes of the school have always contained a number of students preparing for London degrees, although no special arrangements were made for them. Now, it seems somewhat ironical that in a city which is proud of its University the Technical School should advertise classes for the University of London. I should like to see the Technical School affiliated to the University, or, at all events, such teachers as may be thought worthy might be recognized as teachers of the University of Birmingham. This is what happens in London in connexion with the evening classes of certain of their institutions, and I have never heard that it has had a bad effect on the University."

THE Scottish Education Department have issued a memorandum on Nature Study and the teaching of Science in Scottish schools. In a prefatory note it is stated that it has for years past been the policy of the Department (as expressed in the Code) to refrain from prescribing in detail the courses of instruction in the various school subjects. Teachers and managers have been left free to formulate their own proposals for consideration and approval. There is no thought of departing from this policy, which, though not without its disadvantages in certain cases, has yet given a stimulus to independent deliberation upon questions of curriculum, and thereby a directness of purpose and aim to individual work, the effects of which are becoming increasingly visible in our schools. The task of laying down a suitable course in any given subject is, however, by no means an easy one, and the Department have been repeatedly appealed to for

guidance. It is in response to these appeals that the preparation of the memoranda has been undertaken. It follows from what has been said that, as a rule, no attempt has been made to formulate a definite scheme of instruction. A definite scheme must be relative to the particular school to which it is to apply, and must take account of many circumstances, such as the size of the school concerned, the extent to which the classes are subdivided, and, above all, the contribution which the home may be depended upon to make towards the education of the children—considerations which are foreign to a general discussion. But an endeavour will be made to present clearly the end and aim of instruction in each separate branch, and the inner articulation and development of its subject matter, as well as to indicate certain leading principles which should be kept in view in the preparation of detailed syllabuses.

A SERIOUS outbreak of fire took place at Harrow School (April 2). The outbreak occurred at 10 minutes past 9 o'clock, in the top portion of Mr. Somervell's house, which is known as Stogdon's house. At the time the school was present in the Speech Room, where a lecture was being delivered. On leaving the Speech Room, Mr. Somervell was informed that his house was on fire. Perfect order was maintained by the boys, and Mr. Somervell called over the roll. The master and boys quietly walked up the street to the house, and by the time they arrived there the building was blazing furiously. The house, which is owned by Mr. Stogdon, one of the senior classical masters, is a building of four stories, contains from forty-five to fifty rooms, and accommodates thirty-eight boys, in addition to the household and servants. For some time it was feared that the flames might spread to Mr. Stogdon's present house, which is only separated by a small gap from the burning building; but this was prevented, after many willing helpers had assisted in removing pictures, valuables, &c., from the threatened premises. Shortly after 11 o'clock Mr. Somervell's house was practically destroyed, and there appeared to be no further danger of the fire spreading. Part of the building destroyed is about eighty years old, and part fairly new. Among the contents lost are many silver cups, all the name boards, and the photographs. The damage, which is estimated to amount to £8,000, is covered by insurance.

MR. ERNEST HUGH McDougall, Professor of English and History at Elphinstone College, Bombay since 1905, died (April 11) at Beaconsfield, Great Malvern, the residence of his father, the Rev. T. H. McDougall, at the age of thirty. Educated at Haileybury, and at New College, Oxford, where he graduated M.A., Mr. McDougall entered the Indian Educational Service in 1894, and in that year was appointed Professor of English Literature at Deccan College, Poona. He was a Fellow of Bombay University and the author of several educational and historical works.

#### UNIVERSITIES AND COLLEGES.

Oxford. THE report of the School of Geography for 1907 states that the students numbered 58, 63, and 74 in the three terms, as against 60, 21, 110 (most of whom attended only Lecture courses) in 1906. The number of students giving all or most of their time to geography shows a gratifying increase. Fourteen students in the Michaelmas term took the Diploma Courses, and three others took the Certificate Courses.

Dr. A. A. Macdonell, Boden Professor of Sanskrit, has just returned, after an absence of nearly seven months, from a tour of study and research in India. He has examined several public and private libraries containing nearly 80,000 Sanskrit MSS. and acquired a number of old and valuable MSS. for the University of Oxford. He has also brought home a number of photographs suitable for teaching and lecturing purposes, illustrating the architectural and sculptural antiquities of every part of India, as well as Ceylon.

LONDON. THE Report of the University College Committee states that during last session there were 1,191 students, 171 of them for post-graduate and research work. Large extensions of the buildings, together with the removal of the school to Hampstead, have provided much needed room for the Departments of Medicine and of Mechanical and Electrical Engineering. The list of original papers worked

out in many departments indicates great activity. The post-graduate courses show the extensive provision for higher work that is now to be found in London. The short reports of the students' societies give assurance that the corporate life of the College is in a healthy condition. Among the new societies is specially to be noted the Intercollegiate Law Students' Society, which is an evidence of the growth and activity of the Law Faculty, in spite of its deplorable lack of endowment. The results of the Treasury visitation are for the most part eminently satisfactory to the College. The report concludes with a summary of the urgent needs of the College if it is to meet the demands made upon it.

A DIPLOMA in Public Health has been instituted; Sheffield. and it has been resolved to admit to *ad eundem* degrees "Associates of the University College of Sheffield and of its Technical Department who had graduated at another University prior to the establishment of the University of Sheffield," and on certain other graduates who "would have been associates of the University College of Sheffield if they had graduated prior to the establishment of the University."

The following resolution has been unanimously adopted by the University Council:—"The Council desire to express their sorrow at the death of Dr. Sorby, who, as President of the Council of Firth College and of the Technical School, as Vice-President of the University College, and as a member of the Council of the University, has been associated with the University movement in Sheffield since its inception nearly thirty years ago. They recognize that to his influence and exertions, his foresight and generosity, is due in no small degree, the present position of the University. They rejoice that it was given him to see the new University established on a firm basis and in a position to take part in that extension of knowledge which he had so much at heart."

Bristol. A COMMITTEE of Educational Inquiry and Research has been formed, with the following programme:—

I. An educational library of a character, as regards works on education, similar to that known as the British Library of Political Science at the London School of Economics and Political Science, and to contain: (1) the official publications of central education authorities, British, Colonial, and foreign; (2) the official publications of selected local authorities in England and abroad; (3) the publications, prospectuses, &c., of English and foreign educational institutions; (4) a collection of typical English and foreign school text-books.

II. An educational museum of a character similar to that of the Musée Pédagogique in Paris, and to contain: (1) Examples of exercises in wood-work and in metal-work to illustrate courses of technical instruction in English and foreign schools and institutions; (2) examples of school exercises in drawing and in brushwork from England and abroad; (3) photographs, tracings of ground plans, &c., of educational establishments.

III. The publication of reports, collected statistics, &c., to supplement those of the Board of Education, and of similar institutions elsewhere, and especially with a view to elucidating local educational problems.

BANGOR. PRINCIPAL REICHEL reported at a meeting of the Governors on April 14 that, owing to deaths and other causes, the new buildings fund had been sensibly weakened. The amount of the tender for the first section of the buildings is £67,675, and the cost of furnishing will bring this up to £80,000. The amount already secured to meet this expenditure is £57,500, so that a sum of £22,500 is still needed to clear the cost of the first section of the new buildings. The movement, however, is being well taken up. A vote of congratulation was passed to Mr. Lloyd-George, and it was delicately hinted that the new Chancellor of the Exchequer might turn a friendly eye on the claims of the Welsh Colleges.

ST. ANDREWS. PRINCIPAL SIR JAMES DONALDSON gave the closing address of the session. After a brief allusion to the necessity for revising the arrangements of secondary schools, and the provision of better and wider prospects for the teachers who served in them, he observed that the summer session that was about to follow might be the last. The motives which had compelled the Universities of Glasgow, Aberdeen, and Edinburgh to establish the three-term system did not appeal to St. Andrews, where they had practically three terms already, though their summer session was not

obligatory. While they had done remarkably good work under the present arrangement, the Principal pointed out that there were various reasons why St. Andrews should fall into line with the other Universities. Accordingly, this year or next, they were sure to have an ordinance similar to those of the other Universities.

#### Irish Universities.

THE following resolution was passed at a meeting of the County of Galway (Joint) Technical Instruction Committee, held at Galway on April 8:—

That the County of Galway (Joint) Technical Instruction Committee, having had before them the text of the Irish Universities Bill, regret to observe that the Queen's College, Galway, has not been treated in a way sufficient to meet the educational needs of the Province of Connaught. The endowments and grants from all sources have hitherto been barely sufficient to enable the College to carry on its work on a scale much more limited than is now contemplated, yet the inclusive grant proposed in the new Bill practically amounts to the same sum as the combined grants hitherto received. Extension or development of College work in the future would accordingly be rendered impossible. We would, therefore, respectfully call on the Government to reconsider the financial proposals of the Bill relating to Queen's College, Galway, and to amend the same in a generous spirit, and so render possible the realization of the great hopes now entertained for the development of higher education in the West of Ireland.

The Belfast National Teachers' Association have passed a resolution emphatically protesting against the proposals in the University Bill, which exclude extern students from the University examinations and prohibit them from obtaining degrees, as has been the custom for upwards of a quarter of a century. They regard such proposals as reactionary and retrograde, and as opposed to liberal and enlightened sentiment, and call upon the Irish representatives of every creed and political faith to insist upon the removal of any clause or word from Mr. Birrell's Bill that would curtail in any degree the privileges which students who cannot attend the classes and lectures in the College enjoy under the present Royal University.

At the quarterly meeting of the Lurgan District L.O.L., a resolution was unanimously passed deprecating the action of the Government in attempting to force a State-aided Roman Catholic University in Ireland, as it would perpetuate sectarian and religious differences, and also because the Roman Catholic atmosphere would be paramount in the Galway and Cork Colleges. The proposed University for Dublin, Galway, and Cork would be managed by the Roman Catholic clergy, as they recently declared they would not consent to the control of education by the laity; Trinity College would become a purely parochial college, and the Belfast University strictly sectarian. The resolution also declared that the Bill completes the destruction of social and friendly ties between various denominations, and confidently hopes the Belfast people will repudiate such a degrading attempt to secure denominational separation. The Bill, it is stated, is a dishonest attempt to govern Ireland by the purchase of the Nationalists, and cordial appreciation is expressed at the action of the member for North Armagh in moving the rejection of the Bill in the House of Commons.

At a meeting of the professors and lecturers of Queen's College, Belfast, to discuss the Irish University Bill, resolutions were adopted expressing gratification that an earnest attempt was being made to settle the University question on a permanent basis, rejoicing that the Bill ensured that the proposed new University in Belfast should stand upon the same broad non-sectarian and purely academic basis as Queen's College, and stating that the elevation of the College to University rank would give an impetus to higher education throughout Ulster.

Prof. Leebody, President of Magee College, speaking at Derry (April 8), said that under the Government's scheme Magee College was to be treated with special disfavour, its vested interests ignored, and deprived of all the rights which it had long and worthily enjoyed. The College which it was proposed to paralyse belonged to a class of institution that depended for success on self-reliance and self-help, without a perpetual whine for State aid. The Government's action towards Magee College was indefensible.

Wales. SPEAKING to one of our representatives (says the *Western Mail*) a well known Welsh educationist said that the position of the Government in regard to University grants was absolutely inconsistent. "When training colleges are being erected," he said, "they are given two-thirds of the amount of the cost of the building, and the

same proportion ought to be applied to general University purposes. In the case of the Welsh colleges they have to be content with £4,000 each, with a special grant of £800 for agriculture in Bangor and Aberystwyth. In England special grants are made for research work and a pension fund is provided. If there is one thing more needed than another in Wales it is a pension fund, because Aberystwyth College has been in existence for thirty-six years and Cardiff and Bangor for twenty-five years, and not the slightest provision is made for members of the staffs who may break down through old age and other causes. The Welsh members of Parliament ought to exert themselves not only to secure an increase in the general grant, but to get special grants for research work and a pension fund."

## CORRESPONDENCE.

### A CORRECTION.

To the Editor of "The Educational Times."

SIR,—A treacherous memory and an imperfect note led me, in the course of a lecture reported in your last issue, to attribute to Cuthbert Tunstall what really belongs to Robert Recorde ("The Grounde of Artes," 1561 edition). Both the books—and many other early arithmetics of the utmost interest to the teacher—are contained in the late Prof. de Morgan's splendid collection which is now part of the library of the University of London.

I trust that you will be able to spare space for this correction.  
—Yours faithfully,  
T. PERCY NUNN.  
London Day Training College.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on April 11. Present: Sir Philip Magnus, M.P., President, in the chair; Mr. Barlet, Rev. J. B. Blomfield, Mr. Brown, Mr. E. A. Butler, Mr. Charles, Mr. Hawe, Miss Lawford, Dr. Maples, Mr. Milne, Mr. Pinches, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Starbuck, Rev. J. Stewart, and Prof. Foster Watson.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Teachers' Registration Council, which was constituted by Order in Council under the Education Act of 1902, had come to an end on March 31, and called attention to a statement made in the House of Commons by the President of the Board of Education respecting the steps that were being taken by the Board for the constitution of a new Registration Council. He also called attention to the reply of the President of the Board of Education to a deputation that had waited on him to protest against certain of the regulations for secondary schools recently issued by the Board.

The diploma of Licentiate was granted to Mr. H. Banbery and that of Associate to Mr. H. B. Lal, who had satisfied the prescribed conditions.

The report of the Finance Committee was adopted.—Grants from the Benevolent Fund were made to five necessitous members of the College, their widows, or orphans; and the names of seven members were removed from the members' list on account of non-payment of the annual subscription.

Mr. E. F. Mark, M.A., Ph.D., 17 Woodgrange Avenue, Ealing Common, W., and Mr. A. W. Bain, B.A., B.Sc., F.C.S., Fairlight, Muswell Rise, N., were elected members of the Council.

Miss M. Cahill, L.C.P., St. Mary's Priory, Princethorpe, Rugby, was elected a member of the College.

The following books had been presented to the Library since the last meeting of the Council:—

- By A. & C. BLACK.—Darbshire's Plant Book for Schools; Kirkman's Deuxième Année de Français.
- By BLACKIE & SON.—Britain and Germany in Roman Times (Blackie's English Texts); Richardson's Magnetism and Electricity; Roberts and Barter's Teaching of English.
- By the CLARENDON PRESS.—Delbos' Gautier's España and Fmaux et Camées; Legouis' Pages Choieses de Auguste Angellier; Savory's Sainte-Auve's Trois Portraits Littéraires.
- By GINN & CO.—Robinson and Beard's Development of Modern Europe, Vols. I. and II.; Robson's De Maistre's Les Prisonniers du Caucase.
- By METHUEN & CO.—The Baring-Gould Selection Reader; The Baring-Gould Continuous Reader; Major's Health and Temperance Reader; Willnot-Buxton's History of Great Britain.
- By RIVINGTONS.—Hartog's Hansel et Gretel and Les Trois Corbeaux; Savory's Ebner-Eschenbach's Krambambuli.
- By WHITTAKER & CO.—Teacher's Handbook to Mackay and Curtis's First and Second French Books.
- Medical Register, 1908; Dentists' Register, 1908; Register of Veterinary Surgeons 1908.
- List of Members of the Institute of Chartered Accountants.

COLLEGE OF PRECEPTORS.—CERTIFICATE EXAMINATION, DECEMBER, 1907.

SUPPLEMENTARY LISTS.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively:—

- a. = Arithmetic. ge. = German.
al. = Algebra. gm. = Geometry.
bk. = Bookkeeping. h. = History.
ch. = Chemistry. lt. = Light and Heat.
d. = Drawing. m. = Mechanics.
du. = Dutch. ms. = Mensuration.
e. = English. ph. = Physiology.
f. = French. phys. = Elementary Physics.
g. = Geography. s. = Scripture.

Corrected Lists of Candidates who were placed in the Honours Division of the Second Class.

[The Lists are arranged in order of merit. Bracketing of names implies equality.]

BOYS.

- Allinson, B.P. gm, m, f, ge, ch, d. Wellington College, Salop
Hughes, R.G. s, h, y, bk, phys. Wilsford H., Devizes
Meadows, J. e, g, gm, ch, d. St. Olave's Gram. S., S.E.

- Pearson, H.W.R. bk, f. Weymouth Modern S.
Slater, R.A. a. Gram. S., Shoreham
Berry, S.H. Pannal Ash Coll., Hargrrove
Cook, E. Gram. S., Ashton-in-Makerfield

Additional Lists of Candidates who obtained Second Class (or Junior) Pass Division Certificates.

[The lists are arranged in alphabetical order.]

- BOYS.
Beard, A.E. High School for Boys, Hornsey Rise, N.
Bittles, L. Private tuition
Calvert, A. Pannal Ash Coll., Hargrrove

GIRLS.

- Brooker, M. Girls' High School, The Old Palace, Maidstone
Dalton, D.H. Licensed Victuallers' Girls' School, S.E.

Third Class—Honours Division.

- Oesthuysen, M. a, d, du. BOY.
Marist Bros' Coll., Uitenhage
Miller, D. GIRL.
Moorhurst, Irene, Transvaal

Additional Lists of Candidates who obtained Distinction in Scripture.

- Barlow, L. Schorne School, Winslow
Brade, R. Christ Church Higher Elementary S., Southampton
Howard, N.B. Royal Grammar School, Whalley

R. Ford, High School for Boys, Croydon, gained the second place in Geometry.

A Junior prize for General Proficiency was awarded to A. J. Hinxman, Devizes Secondary School.

### THE EDUCATIONAL LADDER.

CAMBRIDGE UNIVERSITY.—Bell Scholarships: (1) Harold Ernest Guilleband, scholar of Pembroke College; (2) Charles Cuthbert Brown, Trinity College; and Charles Ambrose Storey, minor scholar of Trinity College, equal.—Abbott Scholarship: John Kenneth Best, minor scholar of Queens' College; and Thomas Jackson Elliott Sewell, minor scholar of Queens' College.

*Gonville and Caius*.—The Musical and Organist Scholarship of £60 a year for 3 years: H. D. Statham, of Gresham's School, Holt. The Choral Exhibition of £40 a year was not awarded.

*Magdalene*.—Professorial Fellowship: Dr. George H. F. Nuttall, Sc.D., F.R.S., Quick Professor of Biology. Entrance Scholarships: C. K. Ogden, Rossall, £45, for Classics; R. W. H. Moline, King's College, Canterbury; P. J. Grigg, Bournemouth School; and A. N. Fairbourn, Kingswood School, Bath, £45 each, for Mathematics. Exhibitions: F. K. Harris, Eton, £30, for Classics; H. M. Butler, Denstone, £30, for History. Organist Exhibition of £15: R. W. Jepson, Magdalene College. Sizarships: G. L. Winterbottom, Malvern, and A. D. Waugh, Cardiff.

*Selwyn*.—Scholarships: H. A. Baxter, Alum County School, Mold, £40, for Mathematics; S. T. Burfield, Battersea Grammar School, £40, for Natural Sciences; A. D. Hodgson, Tonbridge School, £35, for Classics; F. Goatcher, St. Olave's Grammar School, £30, for Natural Sciences. Exhibitions of £20: For Mathematics, J. T. Bleasdel (St. Edmund's School, Canterbury); H. M. Gardner (Royal Grammar School, Worcester). For Classics, B. C. Blakeway (Eastbourne College); W. Ingham (St. Peter's School, York). For Natural Sciences, H. V. Griffith (Hull Technical School).

*Trinity*.—College Prize for English Essay: C. D. Broad and F. Russell Hoare, equal. Honourably mentioned, J. F. Roxburgh.

Major Scholarships.—Third year: G. I. Taylor, Mathematics and Natural Sciences; C. K. Bancroft, P. G. J. Güterbock, and J. A. Orange, Natural Sciences; J. W. Reynolds, History. Second year: R. H. A. Carter and C. E. Weatherburn, Mathematics; J. H. McCubbin and J. Meek, Classics; H. L. P. Jolly, Natural Sciences; E. A. Hughes and F. D. Purser, History. First year: E. H. Neville and B. N. Rau, Mathematics; A. G. Sutherland, Classics. Recommended in December, 1907, and now elected: R. H. Fowler, Winchester, Mathematics; F. W. Haskins, Charterhouse, and D. H. Robertson, Eton, Classics; E. D. Adrian, Westminster, for Natural Sciences. Major Scholarships Confirmed.—Third year: N. B. Michell, Classics. Second year: A. H. S. White, Mathematics. First year: P. J. Daniell and G. H. S. Pinsent, Mathematics; J. R. M. Butler, H. E. Foster, and G. G. Morris, Classics. Recommended for Prolongation of Minor Scholarships.—Second year: E. D. Clark, Mathematics; T. E. J. Bradshaw and L. R. Fawcus, Classics. Recommended for Sizarships.—Third year: W. H. A. Whitworth, Mathematics. Second year: R. W. Howard, Classics; K. R. Lewin, Natural Sciences. First year: R. W. Cheshire and H. W. Masterson, Mathematics. Recommended for Exhibitions.—Third year: T. H. Just, Natural Sciences. First year: R. V. Southwell, Mechanical Sciences. Non-resident: G. H. Geach, University College, Cardiff. Recommended for Prolongation of Exhibitions.—Second year: B. M. Bayly, Mathematics; W. J. Ward, Natural Sciences; W. R. Kingham, W. O. Smith, and C. N. S. Woolf, History.

*Local Examinations*.—Prizes of £12 to the best senior boy and girl, and of £8 to the best junior boy and girl: Senior boy (July), A. W. Bonfield, Burton-on-Trent; senior boy (December), F. Sandon, South Islington; senior girl (July), D. C. Patterson, Birmingham; senior girl (December), W. M. Gray, Eastbourne; junior boy (July), L. J. Sutton, Stourbridge; junior boy (December), E. M. Maccoby, Holloway; junior girl (July), N. Franks, Middlesbrough; junior girl (December), M. Stoddart, Wigton. The Royal Geographical Society's medals for the best senior and best junior in geography and physical geography combined:—Senior (July), no award; (December), Maurice F. Walsh, Hull; junior (July), no award; (December), Gerald G. Walsh, Hull. Medals offered by Sir Isaac Pitman and Sons to the junior candidates first and second in Shorthand:—(July), no awards; (December), silver medal, Rupert H. Gill, Watford; (December), bronze medal, Eric M. I. Buxton, Malvern. Marmaduke Levitt Scholarship:—F. C. Walker, Wolverhampton Grammar School.

CIRENCESTER: ROYAL AGRICULTURAL COLLEGE.—Honour diploma of membership, Pandit Ram Gopal. Certificate of proficiency in Practical Agriculture, J. H. Middleton. Scholarships: R. W. Carr, W. G. Wright, and H. Singh.

EASTBOURNE COLLEGE.—Entrance Scholarships: C. C. Burdge (Mr. W. Davies, St. George's School, Eastbourne), A. N. Cave (Rev. E. Earle, Bilton Grange, Rugby), R. L. Higham (Mr. G. Atkinson, The Limes, Croydon), J. Hely-Hutchinson (Mr. G. Paxmore, Charney Hall, Grange-over-Sands), R. W. Digby-Wingfield (Mr. R. H. Wyatt, Streatcham School), H. E. Yeo (Mr. G. Atkinson, The Limes, Croydon).

ELTHAM COLLEGE.—Scholarships: A. M. Pigott (Mr. R. R. Leggatt, Greenfield Hall, Holywell), H. V. Strong (Eltham College). Rotely Scholarships: F. H. St. G. Matthews (private tuition), C. H. F. Woolley (private tuition), H. E. R. Upham (Eltham College).

ETON.—Newcastle Scholarship: Finlay, ma., K.S., scholar; Bainbrigg, K.S., medallist; (selected) Grenfell, Bigg-Witten, K.S., Mitchison, ma., Pope, K.S., Matthews, K.S., Clauson, K.S., Madan, ma., K.S., and Finlay, mi., K.S.

GIRTON COLLEGE.—Entrance Scholarships and Exhibitions: Jane Agnes Chessar Foundation Scholarship in Classics, about £88 a year for 4 years, Miss E. M. Steuart (North London Collegiate School); Clothworkers' Scholarship, £60 a year for 3 years and an additional term, Miss E. B. Harvey (High School and University, Manchester), for Mathematics; the Skinners' Scholarship, £50 a year for 3 years, Miss E. S. Duckett (St. Mary's College, Paddington), for Classics, bracketed equal to Miss H. Richardson (James Allen School), who holds a Gilchrist Scholarship and is ineligible for a College Scholarship; Todd Memorial Scholarship, augmented to £50, to Miss D. V. Burch (Oxford High School) for Natural Sciences; College Scholarships of £30 each, Miss M. Soman (Norwich High School) and Miss F. E. Harmer (City of London School), bracketed equal in Modern Languages; Pfeiffer Scholarship of £20 to Miss C. Selby (Sydenham High School), for History; and a College Scholarship of £20 to Miss E. Ferguson (Croydon High School), for Mathematics. Exhibitions, £15 each: Miss D. Watson (Lancaster Grammar School), for Classics; Miss H. M. Hetley (Sydenham High School), for French and German; Miss H. D. Bugby (James Allen School), for Mathematics; Miss D. L. Beck (King Edward VI. School, Birmingham), for History; Miss W. M. Handford (Bradford Grammar School), for Mathematics; Miss E. M. Elligott (Clapham High School), for Natural Sciences. Miss I. Thwaites (private tuition), in Mathematics, and Miss E. Parfitt (Aberdare County School), in Natural Sciences, attained the standard for these Exhibitions.

HARROW.—Botfield Scholarship, G. K. M. Butler; Sayer Scholarship, F. W. W. Baynes; Fifth Form Scholarship, H. Gardner; Neeld Medal for Mathematics, C. W. K. MacMullan; Baker Mathematical Prize, R. E. Pollock; Prize for Elementary Mathematics, R. A. Fisher; Prior Divinity Prize, G. K. M. Butler; Beddington Prize for Physics, L. H. Alison; Beddington Prize for Chemistry, L. H. Alison.

LONDON: ROYAL ACADEMY OF MUSIC.—Goldberg Prize for Tenors, T. Gibbs; Charles Mortimer Prize for Composition, C. Carpenter; Sterndale Bennett Prize for Female Pianists, H. M. Dodd, who was also awarded the Louisa Hopkins Memorial Prize.

LONDON: ROYAL COLLEGE OF MUSIC.—Council Exhibitions—Singing: Jane F. Fyans, Florence S. Taylor. Piano: Mary E. Vickery. Composition: E. G. Toye. Organ: H. B. Derry. Charlotte Holmes Exhibition, Adelaide E. Parker (Organ); John Hopkinson Gold and Silver Medals for Pianoforte Playing, Ioan L. Powell and W. D. Murdoch; Henry Leslie (Herefordshire Philharmonic) Prize for Singing, Maud E. Wright; Challen Gold Medal for Pianoforte Playing, Grace A. Humphrey; Arthur Sullivan Prize for Composition, E. W. Gritton; Clementi Exhibition for Pianoforte Playing, Cordelia H. Montgomery; Scholefield Prize for String Players, Miss Bostock (violin). Operatic Class: Kate Anderson Prize, Bessie Bowness; Fanny Heywood Prize, Fannie Zausmer. Elocution Prizes, Emelie A. Ferris, Dora G. Arnell, W. Spencer Thomas; Gold Medal presented by Rajah Sir S. M. Tagore, of Calcutta, Gladys M. E. Honey; Dannreuther Prize for the Performance of a Piano Concerto with Orchestra, Ioan L. Powell; Kent Scholarship, Elsie M. Dudding (violin).

LONDON UNIVERSITY.—The Martin White Studentship of £100, lately vacated by Mr. Gerald Camden Wheeler, B.A., has been extended to him for a further period of one year, in order to enable him to accompany Dr. Rivers to the Solomon Islands for the purpose of investigating the sociology of a mother-right community. This extension has been rendered possible by the

generosity of Mr. Martin White in offering to provide a further sum of £100 for the purpose.—The Gilchrist Studentship for Women has been awarded to Miss Marion Pick, B.Sc. (1st Class Honours Mathematics, 1907), of the Royal Holloway College. [We unfortunately misprinted Miss Pick's name last month].—Mr. T. P. Hilditch, B.Sc., of University College, has been recommended to His Majesty's Commissioners for the Exhibition of 1851 for appointment to a Science Research Scholarship.—Mr. A. D. Webb, B.Sc., of the London School of Economics, has been awarded the Gladstone Memorial Prize for the year 1907.

OXFORD: LADY MARGARET HALL.—Mary Talbot Scholarship, £40 a year for 3 years (Modern History), Miss Margaret Spencer-Smith, Church of England High School, Graham Street; Scholarship of £30 (Modern History), Miss Helen B. Kenyon, Godolphin School, Salisbury; Jephson Scholarship, £50 (Mathematics), Miss Rosalind M. Fynes-Clinton, Sandecotes School, Parkstone. Miss K. M. Metcalfe, Cheltenham Ladies' College (English), and Miss K. A. Newbold, Tunbridge Wells High School and Godolphin School, Salisbury (Latin and French), were distinguished in the examination.

OXFORD: SOMERVILLE.—Clothworkers' Scholarship: M. Kingsland (Pendleton High School, Manchester), for Natural Science. Edith Coombs Scholarship: D. Sheepshanks (St. Felix School, Southwold), for Modern History. Exhibitions: D. de Zouche (Liverpool High School), C. Todd (St. Felix School, Southwold), for Modern Languages; N. Henderson (City of London School for Girls), for English; A. Horsman (private tuition), for Classics.

OXFORD: ST. HUGH'S HALL.—Hall Scholarship: Miss Jean M. Douglas (Modern History). Clara Evelyn Mordan Scholarship: Miss Edith M. Linton, St. Mary's College, Paddington (Classics).

OXFORD UNIVERSITY.—Lothian Prize: Roger H. Soltan, scholar of Pembroke. Matthew Arnold Prize: Henry Birkhead, B.A., Trinity.

All Souls.—Fellowship: Mr. A. F. Pollard, M.A. (Jesus), Professor of English History and Dean of the Faculty of Arts, University College, London.

Corpus Christi.—Classical Scholarships: Raywood I. Bottomley, Charterhouse; Edward M. H. Lloyd, Rugby; Ernest Llewellyn Woodward, Merchant Taylors'. Charles Oldham Classical Scholarship: Aubrey Cooke, Stonyhurst. Exhibitions: Richard W. Dugdale, Rugby; and Edward F. Marshall, Marlborough College and Corpus Christi College. Open Natural Science Scholarship: Leo Smith, Manchester Grammar School.

Exeter.—Modern History Scholarship: William H. Wakinsshaw, Kingswood School, Bath. Exhibitions: Edgar N. Moore, Highgate, and Anthony E. K. Slingsby, Radley.

Magdalen.—Demyships in Classics: Edward H. W. Meyerstein, Harrow School; Wilfred R. Childe, Harrow; Alexander Monro, Charterhouse; Robert F. R. Routh, Charterhouse. Exhibitions: George H. G. Smith, Winchester; Bernard M. Herbert, Harrow. Exhibitions: Stephen G. Lee, Shrewsbury, in History; William W. Sweet-Escott, Bradford, in Classics.

Merton.—Postmastership in Natural Science: Ronald H. Sutch, Batley. Exhibition, £60 a year: C. P. Sells, Magdalen College School.

New.—Open Classical Scholarships: Harry A. Siepman, Rugby; and Gilbert R. Mitchison, Eton. Open Classical Exhibitions: Robert W. T. Cox, Merchant Taylors'; and Hugh R. Pope, Eton. Open Scholarship in Natural Science: Walter R. Scott, St. Olaves.

PUBLIC SCHOOLS GOLD MEDAL (Royal Asiatic Society).—Hugh K. Lunn, Harrow.

ROSSALL.—Promoted from junior scholarships to senior scholarships: P. L. Millard, R. E. Boucher, H. V. Leonard, W. F. E. Peareth. Senior Scholarship on Entrance: E. R. Williamson (Mathematics). Foundation Scholarships: F. W. Owen, E. V. Dewar-Mathews (Mathematics). Junior Scholarships: R. V. Menzies, C. M. Reece, R. A. Beloe, Y. L. Ellis, F. Brundrett (Mathematics).

ST. BEES.—Scholarships: H. Feldtmann (St. Bees School), J. V. Brewin (Riber Castle, Buxton—the Rev. G. W. Chippett), F. H. S. Hawkesworth (The Craig School, Windermere)—Mr. W. Snow, G. S. Dix, H. N. Johnson, and T. M. Tate (Mostyn House, Parkgate, Chester)—Mr. A. G. Grenfell, J. R. Percy and H. T. Hughes (St. Bees School), E. M. Spink (Tanllwyfan, Old Colwyn—Miss Francis), H. W. Perry-Gore, H. A. Rodgers, and E. A. Frith (St. Bees School), G. W. O'Brien (Earnseat School, Arnsdale)—Mr. J. M. Barnes, A. Drescher (St. James's, Whitehaven),

W. R. Frith (Ousby Voluntary School), A. Johnston (St. Nicholas's, Whitehaven).

UPPINGHAM.—Scholarships: G. F. Cameron (Messrs. Overton and Brown, Lambrook, Bracknell), D. Newbold (Uppingham, late Mr. F. C. Heath, Rose Hill, Tunbridge Wells), A. C. E. Routh (Messrs. Campbell and Reece, Doon House, Westgate-on-Sea), R. Wheatley (Mr. J. W. Chippett, Riber Castle, Matlock), G. P. Cooke (Mr. E. F. Johns, Winton House, Winchester), P. U. Laws (T. B. Eden, Hillbrow, Rugby).

### TRANSITION FROM PRIMARY TO SECONDARY SCHOOLS.

On one point that is perplexing our Educational Authorities (says the *Times*), there is—or was, not long ago—equal perplexity in America—namely, the transition from primary to secondary schools, and such correlation of their respective

curricula as may render the transition easy and natural. In the United States, more than with us, public education is, in theory and to some extent in practice, a continuous whole from the kindergarten to the University. Though each State makes its own educational laws, and there is no central Authority imposing uniformity of curricula and administration from the Atlantic to the Pacific, there is virtually over all that great continent a truly national system of public education, springing from the people, controlled by the people, and resting upon the fundamental principle that the first and most necessary duty of a democratic State toward its citizens, in the interest of civil order and well-being, is to educate them for the efficient discharge of their citizenship, and to give every one an equal start in life. Among the practical difficulties in the application of this theory is that of co-ordination. The Americans have not yet solved it themselves; they will, no doubt, be interested in such attempts as are being made to solve it in England. They are making many experiments, for they are freer to experiment than Whitehall allows English teachers to be; and the direction which the most fruitful of such experiments have taken is that of introducing some of the high school subjects, such, for example, as algebra, history, or Latin, into the upper grades of their primary schools.

As our own Local Authorities, to whom the Act of 1902 has given the power to deal with both primary and secondary education and the duty of co-ordinating them, get under their supervision a better supply of secondary schools, such experiments will be possible here. Of the need for facilitating the transition between elementary and secondary schools, if higher education is to be accessible to the children of the artisan classes, there can be no doubt. The more promising scholars in the higher standards of an elementary school are capable of beginning to face the difficulties of higher subjects before they leave it; and, unless their mental growth receives such fresh development, there is danger that they may stand still, and that while they are, so to speak, marking time, a valuable period of growth may be wasted, and they themselves may be unduly discouraged by the first stages of the secondary curriculum. Any hints that our own and the American teachers can give each other from their respective experiences may in time bear valuable fruit.

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.  
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.  
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS OF MUTUAL LIFE ASSURANCE** without personal liability on highly favourable terms to

**THE CLERGY AND THEIR RELATIVES.**

**ALL PROFITS BELONG TO THE MEMBERS.**

Accumulated Fund, **£4,242,820.** Annual Income, **£453,897.**

Bonuses Distributed, **£4,256,464.**

**LOW PREMIUMS. LARGE BONUSES.** Notwithstanding the lowness of the Premiums charged, the **BONUSES** are on an **EXCEPTIONALLY HIGH SCALE.**

**NEW AND SPECIAL POLICIES.** Application is invited for the **PRO-SPECTUS**, and Leaflets explaining two new Policies, with valuable Options.

**1. WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one-half the usual rate—during first ten years.

**2. PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

### SPECIMEN OF RATES FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

## Mr. MURRAY'S LIST.

### An Introductory History of England.

From the Earliest Times till the year 1832. By C. R. L. FLETCHER, M.A., Fellow of Magdalen College, Oxford. With Coloured and other Maps, Plans, and Index.

Part I.—From the Earliest Times to the End of the Middle Ages. 5s. Part II.—From Henry VII. to the Restoration. 5s. Part III.—*In preparation.*

"This is Mr. Fletcher's second volume, and it is, if anything, better than his first."—*The Times.*

### Der Neue Leitfadern.

The Student's First German Book. By L. M. DE LA MOTTE TISCHBROCK, Bedford Modern School. 2s. 6d.

A new German Course, based on Reform Methods.

### Old Testament History. Period V.

From Hezekiah to the end of the Canon. By the Rev. J. M. HARDWICH, M.A., and the Rev. H. COSTLEY-WHITE, M.A., Assistant Masters at Rugby School. With a Map of Palestine. 2s.

This volume is intended to provide material for one term's work. The following are some of its chief features:—

1. Where possible, the text of the Biblical narrative is used.
2. Historical explanations and general commentary are inserted by the Editors in their proper place.
3. The chronological order of events has been followed.
4. The period is illustrated by reference to, and quotations from, the contemporary Prophecies and Psalms.
5. Foot-notes are added, but only where difficulties of thought or language seem to demand explanation.

### Woodwork for Schools on Scientific Lines.

A Course for Class-work or Private Study. By J. T. BAILY, Head Master of St. Albans Technical School, and S. POLLITT, B.Sc., Head Master of Southall County School. With Illustrations. In Three Parts, or complete in One Volume.

[Part I. 9d. *Just ready.*]

### Stories Selected from the History of England from the Conquest to the Revolution.

For Children. By the late Rt. Hon. JOHN WILSON CROKER, M.P. Illustrated by 24 Woodcuts. 17th Edition. 2s.

### The Year's Work in Classical Studies, 1907.

Edited for the Classical Association by W. H. D. ROUSE, M.A., Litt.D., Head Master of the Perse Grammar School, Cambridge. Index. 2s. 6d. net.

*Contributors:*—R. M. Dawkins, M.A.; W. Warde Fowler, M.A.; George Macdonald, M.A.; Lewis E. Farnell, D.Litt.; M. O. B. Caspari, M.A.; Marcus N. Tod, M.A.; Louise E. Matthaei; Arthur S. Hunt, D.Litt.; Prof. W. M. Lindsay; Arthur S. Peake, M.A.; J. E. Sandys, Litt.D.; A. J. B. Wace; James Hope Moulton; T. Ashby, M.A.

### Murray's French Texts.

For Upper and Middle Forms. Edited by W. G. HARTOG, B.A., Lecturer in French at University College, London; Oral Examiner to the London County Council and to the Army Qualifying Board.

This series will consist of selections from the masterpieces of nineteenth-century French authors.

Following the most recently approved method of our Continental neighbours, the notes (which are given *only* when necessary to clear up obscurity) are printed at the bottom of the page. Grammatical points will naturally be dealt with by the teacher in the class.

Each volume will contain a series of questions upon the text, grammatical drill upon points which arise in the course of reading, and suggestions for free composition, parsing, dictation, &c.

A biographical note (in simple French) descriptive of the career of the author serves as an introduction to each text.

*Now Ready.*

### La Mare au Diable.

Par GEORGE SAND. With Biography, Foot-notes, and Exercises. Crown 8vo, 1s. 6d.

### Confessions d'un Ouvrier.

Par EMILE SOUVESTRE. With Biography, Foot-notes, and Exercises. Crown 8vo, 1s. 6d.

*Other Volumes to follow.*

JOHN MURRAY, Albemarle Street, W.

# MACMILLAN'S NEW BOOKS.

## H.M.I.

Some Passages in the Life of one of H.M. Inspectors of Schools. By **E. M. SNEYD-KYNNERSLEY**, formerly H.M.I. North-West Division. 8vo, **8s. 6d.** net.

A highly entertaining book, containing a large number of good stories told by a *raconteur* of exceptional ability.

### The "Eumenides" of Aeschylus.

With an Introduction, Commentary, and Translation by **A. W. VERRALL**, Litt.D. 8vo, **10s.** net.  
\* \* \* Uniform with Dr. VERRALL's editions of "The Agamemnon" and "The Choephoroi." **10s.** net each.

### Herodotus, Books VII.-IX.

With Introduction, Text, Apparatus, Commentary, Appendices, Indices, Maps. By **REGINALD WALTER MACAN**, D.Litt. 3 Vols. 8vo, **30s.** net.  
[Classical Library.]  
PREVIOUSLY PUBLISHED:—Herodotus, Books IV.-VI. By the same Editor. In 2 Vols., 8vo. Reduced to **20s.** net.

### General History of Western Nations from 5000 B.C. to 1900 A.D.

By **EMIL REICH**, Doctor Juris, Author of "New Student's Atlas of English History." Vols. I. and II. 8vo, **15s.** net.

### Atlas Antiquus.

In 48 Original Graphic Maps, with elaborate Text to each Map and full Index. By **DR. EMIL REICH**. Crown 4to, **10s.** net.

### History of Italy.

By **WILLIAM HUNT**, M.A., D.Litt. New Impression, with Corrections. Globe 8vo, **3s. 6d.**  
The New Impression has been Revised throughout by the Author, and an entirely New Chapter added which brings the History up to date.

### A Short French Grammar.

Comprising Essentials of Accidence and Syntax, with a Chapter on French Sounds, Lists of Words for Practice in Pronunciation and Spelling, and Notes on French Versification and Etymology. By **OTTO SIEPMANN**. Crown 8vo, **2s. 6d.**

SIEPMANN'S CLASSICAL FRENCH TEXTS. NEW VOLUME.

### Pensées, Maximes et Réflexions de Pascal, La Rochefoucauld, Vauvenargues.

Edited by **Prof. ALFRED T. BAKER**, M.A., Ph.D. Globe 8vo, **2s.**

SIEPMANN'S FRENCH SERIES FOR RAPID READING.

### La Bibliothèque de mon Oncle.

Par **RODOLPHE TÖPFFER**. Globe 8vo, sewed, **6d.**

### Key to the Exercises in Siepmann's Primary French Course.

Parts I. and II. By **O. A. JACQUARD**. Globe 8vo, **3s. 6d.** net each.

### The International Geography.

By SEVENTY AUTHORS. Edited by **H. B. MILL**, D.Sc. With 499 Illustrations. New Edition, 8vo, complete, **12s.** net.

The following Sections are issued separately, with Exercises and Examination Papers in the Text:—Preliminary: **Principles of Geography**, 1s. 6d. (*shortly*); I. **British Isles**, 1s.; II. **Europe**, 2s. 6d.; III. **Asia**, 2s.; IV. **Australia**, 1s. 6d.; V. **North America, Central America, and the West Indies**, 2s.; VI. **South America**, 1s. 6d.; VII. **Africa**, 2s.

\* \* \* Detailed Prospectus on application.

### Essay and Letter Writing.

With Models and Outlines. By **F. E. BROOKSBANK**, B.A. Globe 8vo, **2s. 6d.**

### The Principles of Inorganic Chemistry.

By **WILHELM OSTWALD**. Translated, with the Author's sanction, by **ALEX. FINDLAY**, M.A., Ph.D., D.Sc. Illustrated. Third Edition. Medium 8vo, **18s.** net.

### Woolwich Mathematical Papers,

for Admission into the Royal Military Academy and the Royal Military College, for the Years 1898-1907 inclusive. By **E. J. BROOKSMITH**, B.A., and **E. M. MILNE**, M.A. Crown 8vo, **6s.**

### Advanced Arithmetic and Elementary Algebra and Mensuration.

A Text-book for Secondary Schools and Students preparing for Public Examinations. By **F. GOYEN**. Crown 8vo, **3s. 6d.**

The present book is a New Edition, entirely rewritten and recast, of the book formerly issued as "Higher Arithmetic and Elementary Mensuration," and now takes its place.

### Logarithmic and other Tables for Schools.

By **FRANK CASTLE**, M.I.M.E. Extra crown 8vo, sewed, **6d.**

### Graphics.

Applied to Arithmetic, Mensuration, and Statics. By **G. C. TURNER**, B.Sc., Lecturer in Mathematics and Mechanics at the Goldsmiths' College (University of London), New Cross, S.E. **6s.**

*School World*.—"The exposition of graphics given in the volume before us strikes us as possessing unusual excellence; the matter is selected with judgment; the numerous practical examples that are fully worked out lend special interest to the discussion; and the clear statement of the reasons for the various constructions adds very greatly to the value of them in the eyes of the serious student."

### CURRENT EVENTS.

At the next Evening Meeting of the members of the College of Preceptors, to take place on May 13, Dr. Hubert Biss will give a lecture on "School Life and Healthy Growth."

A SERVICE for members of the University of London will be held in Westminster Abbey on May 6, at 6 p.m. The Bishop of Birmingham will preach the sermon. Full academic dress.

A COURSE of three lectures for teachers of geography that have previously studied geology will be given by Miss C. A. Raisin, D.Sc., Morton-Sumner Lecturer in Geology, at Bedford College for Women, on May 11, 18, and 25, at 6 p.m. Registration fee, 2s. 6d. Particulars from the Principal.

PROF. J. H. B. MASTERMAN, Birmingham University, will give a second course of lectures to members of working-class organizations, at Westminster Abbey, on May 2, 9, 16, and 23.

THE London Geological Field Class, conducted by Prof. H. G. Seeley, will make the following excursions: May 9, Frant (The Wealden Watershed); May 16, Otford (Breaching the Chalk Escarpment); May 23, Purfleet (The Chalk Bar on the Lower Thames); May 30, Hampstead and Highgate (Valleys Carved by Land-springs). This is the twenty-third session. Mr. J. W. Jarvis, St. Mark's College, Chelsea, S.W., is the Hon. Secretary.

THE University of Cambridge will celebrate the hundredth anniversary of the birth of Charles Darwin, and the fiftieth anniversary of the publication of "The Origin of Species," on June 22-24. The Hon. Secretaries are Mr. J. W. Clark, Registry, and Prof. Seward.

THE Vacation Term for Biblical Study (for ladies) will meet at Oxford, July 25-August 15. Miss Beatrice Creighton, Hampton Court Palace, is Secretary.

THE Second International Congress of Popular Education will be held under the auspices of the Ligue Française de l'Enseignement, at Paris, on October 1-4. Papers to be sent in by June 30. Correspondence to M. Léon Robelin, the General Secretary, 16 Rue de Miromesnil, Paris.

THE Gloucestershire Historical Pageant will be displayed at Cheltenham, July 6-11. The profits go to the Veterans' Relief Fund.

THE University of Aberdeen has conferred the following honorary degrees:—

D.D.—Rev. James Brebner, M.A., Forgue, Aberdeenshire; Rev. James Brown Craven, St. Olaf's Episcopal Church, Kirkwall; Sir James Donaldson, M.A., LL.D., Principal of the University of St. Andrews;

Rev. Alfred Shenington Green, M.A., Professor of Biblical Literature, Wesleyan College, Richmond, Surrey; Rev. William Skinner, M.A., Principal of Madras Christian College.

LL.D.—William Dobinson Halliburton, B.Sc., M.D., F.R.S., Professor of Physiology, King's College, London; William Johnston, C.B., M.A., M.D., Colonel (retired), Army Medical Staff; Joseph Larmor, M.A., D.Sc., LL.D., D.C.L., F.R.S., Lucasian Professor of Mathematics, University of Cambridge, and Secretary of the Royal Society; George Morison Paul, M.A., Deputy Keeper of the Signet, Edinburgh; William Ridgeway, M.A., D.Litt., Disney Professor of Archaeology, University of Cambridge; George Smith, M.A., Director of Studies, Provincial Training Centre, Aberdeen.

DR. J. N. LANGLEY, Professor of Physiology at Cambridge, has been elected a Foreign Member of the Royal Danish Scientific Society.

**Endowments and Benefactions.** THE Fishmongers' Company has given £1,000 towards the fund for carrying out the incorporation of King's College with the University of London.

THE LATE MR. C. H. MONRO, M.A., Fellow of Gonville and Caius College, Cambridge, has left to his College about £35,000.

"A PRIZE FELLOW" has given £1,000 to the Bodleian Library. "The donor desires by the title to suggest a peculiar obligation on those Prize Fellows who have prospered in this world's goods to come to the help of the University."

SELWYN COLLEGE, Cambridge, on its twenty-fifth anniversary, appeals for building funds. The Master furnishes information and receives donations.

MRS. M. E. SADLER has presented a framed portrait of Prof. Sadler to University College, Reading.

At a meeting held at the Town Hall, Liverpool, there were announced donations to the Building Fund of University College, Bangor, amounting to nearly £1,500. Sir William Tate, Bart., gave £500 (in addition to a former £1,000); and Sir Alfred Jones, £500; Mr. J. W. Hughes, £250; Mr. H. R. Rathbone, £100; Mr. L. S. Cohen, £50; Vice-Chancellor Dale, £5.

THE Powell Duffryn Colliery Company has voted £1,000 a year for 5 years to the Mining School Fund of University College, Cardiff; and £100 for 5 years to each of the Universities of Oxford and Cambridge.

BISHOP'S STORTFORD COLLEGE is raising a fund of £5,000 for additional buildings. £1,000 has been contributed.

A LIST of the Scholarships and Exhibitions awarded by the University of London, Prizes, by the Schools of the University, and by Institutions where there are Recognized Teachers, is set forth in the *London University Gazette* of April 8.

WORCESTER COLLEGE, Oxford, offers three Mathematical Exhibitions (£35 and £21). Open; no age limit. Examination begins June 25. Apply, with usual testimonials, to the Provost by June 19.

LADY MARGARET HALL, Oxford, offers, in March, 1909, the Old Students' Scholarship of £40 a year for three years, a Jephson Scholarship of £45, and a Scholarship of £35.

ST. HUGH'S HALL, Oxford, offers, in March, 1909, a Hall Scholarship of £25 a year for three years and the Otley Scholarship of £40 a year for three years, the latter confined to candidates from Worcester High School.

**Appointments and Vacancies.** LORD RAYLEIGH has been unanimously elected Chancellor of the University of Cambridge, in succession to the late Duke of Devonshire.

Lord Rayleigh (then the Hon. J. W. Strutt) was Senior Wrangler and First Smith's Prizeman in 1865. He became a Fellow of Trinity, and was Professor of Experimental Physics from 1879 to 1884, succeeding Clerk Maxwell and being succeeded by J. J. Thomson, an exceptionally brilliant sequence. He was President of the Royal Society 1905. Perhaps his greatest researches have been in the Theory of Sound; he is more popularly associated with Prof. Sir William Ramsay in the discovery of argon.

MR. JOHN MORLEY, O.M., M.P., has accepted nomination for the Chancellorship of Manchester University.

LORD ROSEBERY has been appointed Chancellor of the University of Glasgow, in succession to the late Lord Kelvin.

PROF. BOYD DAWKINS is resigning the Chair of Geology and Palæontology in the University of Manchester. He has been connected with Owens College since 1870.

PROF. REDMAYNE, Head of the School of Mining, Birmingham University, has been appointed Chief Inspector of Mines under the Home Office.

MR. F. W. THOMAS, M.A., Librarian of the India Office, late Fellow of Trinity College, Cambridge, has been appointed to the new University Readership in Tibetan at University College, London.

At King's College, London, Dr. J. Charlton Briscoe has been elected Assistant Physician to King's College Hospital, and Mr. T. F. Sibley, B.Sc., Lecturer and Demonstrator in Geology at the College.

Two University Readerships—one in Ancient History at University and Bedford Colleges, and one in Greek at Bedford College—are to be instituted by the University of London. Particulars from the Academic Registrar.

At Manchester University, Mr. Edgar Prestage, B.A. Oxon., has been appointed Special Lecturer in Portuguese Literature; Mr. Henry Spenser Wilkinson, M.A. Oxon., Special Lecturer in Military History; Mr. Gerald B. Hertz, M.A., B.C.L. (Lecturer in Constitutional Law, &c.), Special Lecturer in Colonial History; and Mr. Joseph Hall, M.A., D.Litt. (Head Master of the Hulme Grammar School), Special Lecturer in Middle English.

PROF. J. R. AINSWORTH DAVIS, M.A. Cantab., Professor of Zoology and Geology, University College, Aberystwyth, has been appointed Principal of the Royal Agricultural College, Cirencester.

PROF. CRUM BROWN is retiring from the Chair of Chemistry in Edinburgh University, which he has occupied for forty years.

At University College, Bristol, the Rev. De Lacy O'Leary, M.A., B.D., has been appointed Reader in Aramaic and

Syriac; and Dr. J. M. Fortescue Brickdale, M.A., M.D., B.Ch. Oxon., Director of the Public Health Laboratory.

At University College, Reading, Mr. F. Bernard Bourdillon, B.A. Oxon., has been appointed Warden of Wantage Hall and Lecturer in German; and Mr. Herbert J. Maryon succeeds Mrs. Arthur L. Bowley as Teacher of Craft Work.

A LECTURESHIP in Classics and Philosophy is vacant at Armstrong College, Newcastle-upon-Tyne (£150 rising). Apply to the Secretary by May 7.

A HEAD MISTRESS is required for the Liverpool College for Girls (£350, without residence). Apply to the Secretary by May 15.

MISS ADELE SANDERS, second mistress Blackheath High School (Girton, Classical Honours Cambridge, M.A. Dubl.), has been appointed Head Mistress of the Tunbridge Wells High School (Girls' Public Day School Trust).

THE REV. CYRIL A. ALINGTON, M.A., assistant master, Eton (since 1897), and Fellow of All Souls (1896), has been appointed Head Master of Shrewsbury School.

MR. ALEXANDER B. STEVEN, B.Sc., Assistant Lecturer in Dyeing, Leeds University, has been appointed Lecturer in the new Dyeing, Calico-printing, and Finishing Department of the Glasgow Technical College.

MR. WILLIAM EDWARDS, M.A. Cantab., Senior Classical Master, Bradford Grammar School, has been appointed Head Master of Heath Grammar School, Halifax. He is succeeded by Mr. W. J. Goodrich, M.A. Oxon., Senior Lecturer in Classics, Manchester University.

MR. T. F. G. DEXTER, B.A., B.Sc. Lond., Head Master Finsbury Pupil-Teachers' School, has been appointed Principal of the Islington Day Training College.

MR. H. BLACKMORE, Head of the Riccall Schools, near Selby, has been appointed Normal Master and Director of Education to the Colony of British Guiana.

MR. THOMAS J. BURNETT, M.A., Assistant in Broughton Higher Grade School, has been appointed Master of Method under the Edinburgh School Board.

THE REV. M. W. BUTTERFIELD, B.A. N.Z., B.D. Dunelm., has been appointed Principal of the Maori College, Wairenga-i-hika, near Gisborne.

**Literary Items.** MESSRS. CONSTABLE promise immediately an important work, in two volumes, by Prof. Felix E. Schelling, on the "Elizabethan Drama" (1558-1642).

MESSRS. A. & C. BLACK publish the Gifford Lectures, delivered last year at Aberdeen by Dr. Hans Driesch, of Heidelberg, under the title of "The Science and Philosophy of the Organism."

MESSRS. CASSELL will shortly issue a "Pocket French and English Dictionary," abridged by Mr. de V. Payen-Payne from the well known larger edition.

MESSRS. JACK announce a new shilling series of cloth-bound volumes, "bringing together the greatest of the world's stories," under the editorship of Mr. Arthur Ransome, who will also contribute introductions and chronologies. The first two volumes (translations of three tales of Théophile Gautier and of two stories of Hoffmann) are nearly ready. Mr. Ransome's "History of Story-telling" will be published in autumn by the same firm.

MR. T. S. FOSTER, Chairman of the Committee of Educational Inquiry and Research at University College, has received letters from a number of public men expressing sympathy with the scheme to establish in Bristol a Bureau of Educational Information in connexion with the projected University of Bristol and the West of England.

THERE seems now to be every prospect that Prof. Geddes's scheme for the re-erection of Crosby Hall at Chelsea as part of a University Settlement will be carried out very shortly. The cost of the re-erection is estimated at £10,000, and of this, £5,000 has already been subscribed by a well-wisher, who has given another £5,000 towards the completion of the general scheme.

It is hoped that University College Hall, Ealing, established by a company formed of individual members of the Governing Committee and Professorial Board of University College, London, and friends, will be opened in the beginning of October. It provides a suitable home for some forty-one students.

### SIR EDWARD BUSK ON MORAL EDUCATION.

UNDER the auspices of the College of Preceptors, and in connexion with the First International Moral Education Congress, Sir Edward Busk, Chairman of Convocation and Past Vice-Chancellor of the University of London, delivered a lecture at the College of Preceptors in Bloomsbury Square on Wednesday, April 1, on the subject of Moral Education. The chair was taken by the Right Hon. Lord Avebury, P.C. Sir Edward Busk spoke as follows:—

To-day's meeting is held at a time when all who are interested in the promotion of moral education are in a state of expectancy. We are looking forward to the report of the results of the International Inquiry into Moral Instruction and Training in Schools, which began in October, 1906, and continued throughout the year 1907, and also to the First International Moral Education Congress, now being organized, which is to be held in London from September 23 to 26 next. It has, however, been thought right that, while expecting important results from this report and Congress, we should not remain in a state of suspended animation, but should meet together to consider the plan of the Congress and the subjects to be discussed at it.

#### CONDUCT AND CHARACTER.

Of the importance of the subject there can be no doubt. It is given to comparatively few persons to extend the range of knowledge and science, or even to pass their lives in studying what has been discovered by others; but every one has to act continually, and to make on frequent occasions what is, or at any rate appears to be, a free choice between different actions which present themselves to him as alternatives for adoption. Conduct is, and must be, common to all, whether they pursue their intellectual studies or not, and it is of the greatest importance that correct habits should be formed in early youth, partly because such habits will in time lead their possessor to an unconscious and apparently instinctive preference for the better of two possible actions present to his view, and partly because, in circumstances of greater difficulty or in a situation new to the agent, his past habits will have formed in him a character which will enable him to choose the higher and nobler course of action, and even to make that selection at high speed and with certainty. If a man

live continually and from day to day on a high plane, his conscience will be so trained and developed that it will not fail to guide him aright if difficult circumstances occur and present a new problem to him for solution. Conduct, in a word, creates character, and the character acquired is a guide to future conduct.

#### FORMATION OF CHARACTER.

Moreover, character is the one and only possession of which we can be sure. Our knowledge may become obsolete, our health and strength may decay, our property may take to itself wings, our friends may be severed from us by death or other causes, but our habits and character will remain throughout all these changes, and those habits which have been acquired in our early years are the most deeply rooted and least liable to change. Passing from the individual and viewing mankind at large, we find that men are connected in groups of various sizes and complexity, progressing from the family—through villages, towns, cities, and nations—to the greatest brotherhood of all—that of the human race. Besides these groups, there are large numbers of associations of various kinds and sizes, such as Churches, Universities, colleges, schools, professions, clubs, and the like. The members of all these aggregations of men have special relations to each other, involving duties to be performed, rights to be respected, discipline to be maintained. The well-being of each of these communities, whether small or large, depends on the conduct of every one of its members, and the character of each man is therefore of vital importance, not only to himself, but to his fellow-men. It is not an exaggeration to say that the greatest of all educational ends is one which cannot be attained without the moral instruction and training which it is our object to promote. Fortunately, the subject is of such a nature that children can and should receive education in it in many different ways—by direct and systematic instruction; by surrounding the instruction given in other subjects, particularly in those comprised under the head of the humanities (such as ancient and modern languages and literatures, history and composition), with a moral atmosphere; by the supervision of games with a view to prevent disorder and bad temper, and to inculcate fairness and the subordination of personal interests to the success of the side on which the pupil is playing; by sympathy and judicious kindness so as to develop individuality; and, lastly, by personal example and influence. In all these methods, but especially in the last two, home life plays an important part, and the co-operation of parents should be diligently sought.

#### NECESSITY OF INSTRUCTION.

Little progress will be made, however, without instruction, either direct or indirect, and teachers should be carefully trained in Universities or training colleges or elsewhere, so as to be competent to give it and to deal with any difficulties and objections that may be raised and the arguments that are not infrequently urged against the systematic teaching of morals. Among these we may place the following:—(1) The number and diversity of the theories of ethics, (2) the varying standards of good and evil in different countries and epochs, (3) the difficulty of treating of the imperative nature of duty without assuming some sanction either supernatural or natural.

#### DIVERSITIES OF ETHICAL THEORY.

Taking the first objection, it must be admitted that there are many theories based on different metaphysical or philosophical systems. In the old times the line of cleavage was between the permanent essence and the fleeting phenomena—a man being considered as part of the universe or as a microcosm, and all knowledge of him proceeding from the knowledge of the outside world. These systems gave rise, on the one hand, to the transcendental theory of Plato (who held that the permanent extended beyond and above the sensible world) and the immanent theories of Descartes, Malebranche, and Spinoza (who held that the permanent and sensible worlds were co-extensive), and, on the other hand, to the physical theory of Comte, according as emphasis was laid on the permanent or on the phenomenal side of the world. The more modern frame of thought is based on an antithesis, unknown to the ancient philosophers, between the knowing mind and the world outside it, proceeding from the former to the latter and thus reversing the process of the ancients; and here differences arise between the schools of thought which assert that the mind is incapable of knowing anything except phenomena and those which assert that it is capable of piercing through the shifting scenes of time and gaining a knowledge of that which underlies them. These systems of philosophy have produced, on the one

hand, the hedonistic ethics of Hobbes, Bentham, the two Mills, and Herbert Spencer, the theories of Cudworth, Clarke, and Price, and the aesthetic theories of Shaftesbury and Hutcheson; and, on the other hand, the psychological theories of Butler and Kant, who recognize in the mind a power of judging as to the relative nobility or baseness of various motives or springs of action known as propensities (or appetites), passions, affections, and sentiments.

Notwithstanding this difference of view as to its origin, all writers on ethics, ancient or modern, admit the authoritative character of a moral judgment, and that it is in practice applied to the action judged and to the man who performs it. There is therefore an underlying unity, and it is sufficient to teach children the results which form the practical side of morals without troubling them with the diversities of metaphysical or philosophical thought.

Nearly the same remarks may be made about the various religions. Religious instruction is becoming more and more systematically ethical, and, wide as may be the divergencies between religious beliefs, no one can deny that there is underlying them also a moral unity if he will consider the high codes of truth, honour, honesty, and self-sacrifice which are recognized by the Japanese, the pure Buddhists in Burma, the Sikhs, and the Bedouins. Having regard to this, one cannot be surprised to find a fundamental unity in the morals inculcated by the various churches and sects in Christendom, whose beliefs differ far less widely.

#### DIVERSITY OF STANDARDS.

The objection based on the varying standards of good and evil, the existence of which we must all admit, is effectually met by our own everyday experience that no action considered by itself is either good or bad, but that it is good when the higher of the two motives present to the mind of the agent is selected by him, and bad when he selects the lower of the two of which he is cognizant. Actions may be regarded as taking rank as nobler or baser upon a scale like that of a thermometer, and, as mankind advances, the parts of the scale known to it extend higher and higher and nobler motives of action become known, so that what at a low stage of development might have been the highest known spring of action becomes one low down on the advanced scales, and its selection instead of the other possibilities has become reprehensible. For instance, in early tribal wars it was the universal custom to kill—or even to kill and eat—the conquered. Subsequently their lives were spared; but the victors retained them as slaves. This was at that stage a distinct advance, because no other alternative was recognized; but it would afford no justification to more civilized victors if they, with their wider knowledge, should enslave their captives.

If this be the true explanation of the nature of moral judgment, it affords the best proof of the necessity for systematic moral instruction, so that all the motives of action lying open before the most advanced man may be made known to learners, and their scope and power of choice may be enlarged and improved.

#### THE QUESTION OF SANCTION.

The absence of a sanction, which is the basis of the third objection, seems to me to be of the essence of morality. If actions be chosen from fear of consequences either here or hereafter, the resulting conduct is prudent rather than moral—is governed, as Coleridge said, by worldliness or “other worldliness.” It is no good action for me to abstain from murder because I shall be hanged if I commit it. No one will need the stimulus of a system of rewards and punishments who is penetrated with the spirit of morality and turns naturally to the true and noble, shrinking from the baser thoughts and actions.

#### TEACH BY EXAMPLES.

It will be of great advantage to the teachers that they should know of these differences of opinion and arguments, as such knowledge provokes reflection and tends to prevent dogmatic and mechanical methods of instruction and also tends to charitable judgments, seeing that each person, while judging himself as responsible owing to the freedom of choice which he himself feels, may refrain from criticizing others censoriously by bearing in mind that, after all, men may not really be so free in their selection as they feel themselves to be, but may be influenced, if not by a chain of absolute necessity, yet still by the past in the form of heredity, or environment, or their own past life, and that the agent whom he is judging may not have had the opportunity of developing the scale of actions known to him, and may there-

fore have really acted in conformity with the highest motive known to them at the time.

Although teachers who are entrusted with moral education should be familiar with these and similar considerations, yet I think it would be wrong to dwell upon them in the lessons given to children. Every effort should be made to bring home to them the simple categorical imperative which results from all these theories; and, whether the instruction be direct or indirect, they should be led to entertain a deep and enthusiastic reverence for what is noble. This enthusiasm will be evoked far better, in my opinion, by holding up to their view examples of self-sacrifice undergone, duty well performed, respect for others, courtesy and loving-kindness, than by the inculcation of maxims. Fortunately the teacher will find no difficulty in citing lives of men and women who are instances of these virtues and have manifested them in such ways as to be readily understood by children and to impress them with a thrill of reverence and even awe; and instances may be taken from works of fiction in poetry and prose as well as from the accounts given in histories and biographies.

It appears to me, therefore, in short, that the instruction and training of teachers in such an institution as this, in the Day Training College of the London County Council and the College administered by the London University and other places nowadays, can hardly be too wide or complete. The fuller it is the better, but as regards the children, although I speak with great hesitation, because all this valuable information which is to be collected in foreign countries and elsewhere is still out of my reach; yet I think it is wise to educate them principally by example and influence, and then indirectly by saturating the whole teaching and the whole course of school life with these moral principles, teaching them directly rather by examples than by abstract maxims which it will be very difficult for them to understand. These examples, I think, should be selected from instances which a child will readily understand. It would be difficult, for instance, to make a child understand the great philanthropic efforts of Howard with reference to the miserable condition of the prisons in his day; and there are other cases which it might be equally difficult to bring home to a child, but many could be found which would be perfectly intelligible to the youngest child, and be more likely, I think, to awaken the admiration and enthusiasm of a child than even of an adult.

Lord AVEBURY proposed a vote of thanks to Sir Edward Busk for his thoughtful and interesting address. He himself had had the great honour and privilege of being for nearly forty years in one or the other House of Parliament, and during that time he had heard a very great number of addresses on the subject of education. These addresses had generally turned upon those great mysteries and questions upon which, as they knew, there were most diverse opinions; but he hardly remembered, with two or three exceptions, any debate, either in the House of Commons or in the House of Lords, as to the mode of teaching the more everyday subjects, such as elementary science, history, or geography; but still less on the subject of morals. He did not think this was in any way because they undervalued that great subject, but it had rather been supposed that they were all agreed upon it, and it had come to be left almost as a matter of course, as the Irish tenant said with reference to this auspicious subject: "What is everybody's business is nobody's business." Still, it was surely rather remarkable that it had been left till the last two or three years to see an organization started with the object of securing as far as possible that moral teaching and the formation of character should receive a share of attention. He thought they would all agree with Sir Edward Busk that it was a most vital part of education. But, although they were all agreed upon general principles, it was not nearly so easy to agree as to the exact method in which this could be carried out. Sir Edward had told, in his concluding words, the way he would carry it out himself, and he (Lord Avebury) had had the privilege of reading within the last few weeks a number of very interesting papers by many high authorities upon the subject; but there was still certainly a great deal of difference of opinion. He hoped that one effect of the Congress they were about to hold would be more agreement upon the subject, and he was confident that another effect, and a very good one, would be that those Education Authorities who have had their attention called to the matter would see the importance of introducing some training in this respect. Already a large number of Local Authorities who had the responsibility of carrying out the training of teachers in our schools had adopted the suggestions which had been thrown out

by the Moral Instruction League in this country, and in that respect the League had done very good service. He was sure he would be acting in accordance with the wishes of the meeting in asking them to pass a very hearty vote of thanks to Sir Edward Busk for his most interesting address.

Lady GROVE, in seconding the vote of thanks, said she was sure they all felt at one with Sir Edward about moral education, and it only remained for them to agree as to the methods which should be adopted. The lecture they had heard might well make them wish that for once in their lives they might be children again, because the kind of education that was coming was very different from the kind of education which those of them who had seen several decades since they were children had experienced in their younger days. She had been asked to say that the King had sent a message to the organizers of the Congress that he wished the Congress every success, and also that Mr. McKenna, the President of the Board of Education, and M. Doumer, the French Minister of Education, were patrons of it and had given it their strong and earnest support. She believed that there should be no outward coercion in order to keep order in the school, and that the question of discipline really solved itself when education was given on true pedagogic lines. It was anticipated that the effect on the minds of children of lessons given on sound educational principles would make it perfectly unnecessary to issue either threats or prohibitions of any kind, on account of the interest they would feel in their lessons. By moral education they would be enabled to do away with the outward form of coercion such as had been used from time immemorial, not only in schools, but in classrooms. She thought they owed a great debt of thanks to Sir Edward Busk for his illuminating address, which made them feel how eagerly they would welcome this Congress and go to it when the time should come.

Sir EDWARD BUSK, in acknowledging the compliment, said he was always glad to do what little he could for the promotion of education in London, and moved a vote of thanks to the College of Preceptors for the use of their hall for holding the meeting.

The vote of thanks was seconded by Lord AVEBURY, and unanimously adopted.

### PRACTICE AND PREJUDICE IN EDUCATION.\*

By Prof. J. W. ADAMSON, B.A.

(Continued from page 187.)

#### THE THREE R'S.

The prejudices considered thus far originate in a defective understanding of mental process. There are others which indicate a lack of historical information concerning the schoolroom and its tasks. It is a very common prejudice, for example, that the basis of all instruction, the stuff which makes "elementary education," is found in "the three R's." As a matter of fact, this triad has only been established in the schoolroom for a period which is much nearer to two than to three centuries, schools before that time refusing to consider reading in the vernacular, writing, and arithmetic as proper parts of their business. The introduction of these three studies was not brought about from any conviction of their gymnastic value, or even from a belief in their universal necessity, but from purely utilitarian motives; and the introduction was sporadic and gradual. Down to a late date in the seventeenth century, European schools in general taught their youngest pupils to read Latin in those cases only where boys had had no opportunity to learn to read in Latin previously at home. The schoolmaster's view was that such preparatory work should be done for him, just as the boy was taught to talk before entering school. It was only schoolmasters and educators with an inclination towards innovation, men such as Brinsley and Hoole in England, or Messieurs de Port Royal and de la Salle in France, who thought of teaching boys to read the vernacular; in general that accomplishment was "picked up," partly through learning to read Latin words. The common practice is reflected in the regulation laid down in 1654 for the parochial schools of Paris: "before children are put to reading French they must first know how to read Latin well in all sorts of books"—reading, that is, parrot-wise, without understanding what is read. Nearly half a century later de la Salle was called upon by his diocesan to justify the practice of teaching French charity-school boys to read French before Latin.

\* Lecture delivered at the Winter Meeting of the College of Preceptors.

Writing, again, was so little regarded as the affair of the school that in schools less well equipped no systematic provision was made for teaching it; while in schools more liberally conducted pupils needing the instruction were either handed over to a writing-master, a man of inferior standing, or else sent on *half-holidays* to a neighbouring writing school. Hoole, writing in 1660, says that "the usual way for scholars learning to write at the country grammar schools is to entertain an honest, skilful penman . . . for about a month or six weeks together, every year, in which time commonly every one may learn to write legibly." The honest penman generally arrived in May, as "days are then pretty long." Less than a century ago boys at some of the public schools resorted to an external writing master for lessons in penmanship.

Arithmetic is now often spoken of as though it were a very pillar of support to all instruction, a foundation without which no education could be stable; the opinion is backed by resort to some of those prejudices concerning mental gymnastic which have already been reviewed. It is very doubtful whether the most whole-hearted believer to-day in the merits of a "classical education" would deny arithmetic a place, even an honoured place, in the school time-table. But his seventeenth century predecessor frankly regarded arithmetic as an intrusive, "uneducative" nuisance, only tolerated by a weak-kneed surrender to the claims of "usefulness." In fact, arithmetic then "enjoyed" the position now commonly accorded to bookkeeping, shorthand, and typewriting. Here, according to the statutes of Charterhouse (whose foundation dates from 1612) is the educational function of arithmetic: "It shall be [the master's] care and the usher's charge to teach the scholars to cypher and cast an accompt, especially those that are less capable of learning and fittest to be put to trades."

No! "The three R's" are in the schoolroom not in consequence of some inherent powers of educating mind, but as the result of economic changes and altered moral ideals, which have led to the exaction of these particular forms of knowledge and skill from large numbers of the community. The arguments about gymnastic, mental training and the like are an afterthought, which must be scrutinized in the light of educational history if one would avoid prejudice.

All "theorists," and very many practical teachers who disclaim theory, denounce the so-called "alphabetic method" of teaching reading; probably most practical teachers would, under pressure, join the disclaimer. No one has denounced the method more vigorously than Lord Lytton, who says, in "The Caxtons": "A more lying, roundabout, puzzle-headed delusion than that by which we confuse the clear instincts of truth in our accursed systems of spelling was never concocted by the father of falsehood. For instance, take the monosyllable *cat*. What a brazen forehead you must have when you say to an infant *c, a, t* spell *cat*: that is, three sounds forming a totally opposite compound—opposite in every detail, opposite in the whole—compose a poor little monosyllable which, if you would but say the simple truth, the child will learn to spell merely by looking at it. How can three sounds which run thus to the ear, *see-eh-tee* compose *cat*? Don't they rather compose the sound *see-eh-tee* or *centy*?"

In spite of attack from expert and from layman, the "alphabetic method" flourishes still. If account could be taken of all the devices by which children are taught to read, it is to be feared that this discredited plan is the one most frequently employed. What is the explanation? No one, so far as I know, has had the hardihood to adduce the advantage of "mental training" on its behalf. There seems to be no other explanation than the prejudice in favour of routine, as a glance at the history of the matter suggests.

Greek syllabaries which have been unearthed during recent years in Egypt only confirm the fact, known to us on the evidence of Greek authors, that Greek children learned to read their mother tongue by means of an alphabetic method which combined letters for the purpose of giving the sounds of syllables, the latter being presented to the learner in a customary order. It is but a variant of this plan which Quintilian proposes as the best way of teaching Roman children to learn to read Latin. The method therefore came to the schools of modern nations with this weight of tradition behind it, and, as we have already seen, up to the seventeenth century those schools taught their pupils to read Latin, but not the vernacular. That they employed the traditional method of teaching children to master the Latin notation is not in itself surprising, when it is remembered that this particular synthetic plan meets no obstacles of moment

where the language is phonetically spelt. The document of 1650, already quoted as prescribing the reading of Latin before the reading of French, gives the reason for this, to our way of thinking, topsy-turvy order. "French reading," it is said, "is more difficult to pronounce than Latin reading"—that is, the alphabetic or syllabic plan, which is appropriate in mastering a regular notation like the Latin, encounters serious obstacles when applied to the much less phonetically spelt French; applied to the far less law-abiding English spelling, it falls under the castigation of Lytton.

But so ingrained is the conservatism of our profession that when at last English and French boys received instruction from schoolmasters in the art of reading the mother tongue, their teachers continued to employ the method which they had always used when teaching Latin reading, without stopping to consider whether it was equally applicable. Their tradition survives to this day.

#### METHOD IN LANGUAGE TEACHING.

The method of teaching modern foreign languages has a similar history. When these at length made their way to a tolerated place in the curriculum, they found a method of teaching language already established, full of years and honour. It would be too much to expect that any greatly different plan would at that time be adopted for teaching the modern tongues. Latin and Greek were taught by means of grammar-book, delectus, translation, and written exercises, without a thought to their conversational aspect; why should French or German be taught in any other way?

History has answered the question, and tradition has recently received another shock. The Head Masters' Conference in December last was invited to declare the opinion "that the teaching of Latin and Greek should not aim at enabling boys to speak those languages." Yet conversation was certainly one of the aims of the teaching of Latin which Erasmus and Sturmius regarded as of the first importance, and the one was as great a humanist and the other as capable a head master as any member of the Conference to-day.

This particular difference of opinion between the sixteenth and the twentieth centuries is an instructive illustration of a truth which may be usefully applied in the criticism of a good many educational prejudices. The reasons alleged at a later date for the inclusion of a particular study in the course or for the adoption of a certain mode of teaching, are frequently quite different from, and sometimes contradictory to, the reasons which moved men to introduce the one or the other. Thus, of the teaching of Latin and Greek, the Head Master of Eton declares (in Barnett's "Teaching and Organization," pages 214-5): "Putting it quite briefly, the learning of these ancient languages in its earlier stages affords an opportunity for training in precision of thought, memory, inference, and accuracy; . . . it is an unrivalled instrument for stimulating the reasoning faculties at an age in which their very existence might almost seem open to doubt." This is slippery ground on which to base a study: its adversaries are left free to object that the same opportunity exists in other studies which confer benefits over and above that of gymnastic. They will not be deterred by the obviously rhetorical flourish "unrivalled." Canon Lyttelton goes on to say that this very gymnastic quality in the learning militates against the employment of methods which put the languages to use as do modern methods of teaching foreign languages. "We do not want Latin, as we want French, as a medium of communication with other people." That is the case; but the fact is not a conclusive argument against the employment of conversation or of "free composition" as means of teaching Latin or any other language. As a matter of history, the opposite opinion was obstinately held by the head masters of the sixteenth century, who so firmly riveted the classical tradition in the schools.

The thought of these men, who, with a sturdy arm and a broad *ferula*, insisted upon conversational Latin, reminds one of a prejudice from which their memory often suffers to-day. Sturmius of Strassburg in particular, and most of the head masters of his time, are too often painted as blind pedants who differed from others of their kind only in possessing an inordinate measure of obscurantism. "The schoolmasters, with Sturm at their head, set themselves to teach *words*, foreign words, and allowed their pupils to study nothing else—not even the mother tongue" (Quick, "Essays on Educational Reformers," page 30). This is certainly meant to convey the idea that the incriminated persons deliberately shut the world and

its business outside their schoolrooms—anything which savoured of usefulness must not intrude itself upon their time-tables.

Such an interpretation of the admitted facts fails to do even bare justice to the Rector of the Strassburg Gymnasium. That liberal-minded man of affairs and trusted agent of many princes and governments owed very much of his own success in life to an ability to write a sound Ciceronian Latinity. Clear-sighted and practical, he was determined, as far as he could, to confer that accomplishment, so indispensable at that time to every ambitious public servant, upon all who came within his influence as an organizer of schools. It is, no doubt, matter for profound regret that the educational theories of the Ciceronians as applied to the schools by Sturm and Ascham ultimately drove the purer humanism of Erasmus out of the field. But it is an ignorant prejudice which fails to note how very *useful* their scheme of teaching was when judged by the conditions of their own day. Their practice suffered from the defect usually found in the work of those who fix their attention too exclusively on what is recognized as useful; that is, it suffered from a narrowness which in the end defeated its own aim.

#### THEORY AND HISTORY OF PRACTICE.

Why, it is sometimes asked, should the young teacher be burdened with theoretical considerations and with historical studies which seem remote from his daily task in the form-room? Is it not enough that he should learn to discharge that task by practising it? The answer is, that no art is so easily invested with routine as the art of teaching, and in no art is routine more damaging. A knowledge of sound theory and some familiarity with the course of educational practice in the past are amongst the best safeguards of the practitioner against the tyranny of use and wont, whilst they are indispensable factors of that enlightened critical organon which should be the possession of every thinker, administrator, and official concerned with public instruction. If a brief and imperfect consideration of some scholastic prejudices has but suggested the reasonableness of that opinion, the writer of the paper ventures to think that an hour so employed has not been altogether wasted.

#### LONDON UNIVERSITY DEVELOPMENTS.

As we briefly recorded in our last issue, Lord Rosebery, as Chancellor of the University of London, visited University College to open the new Libraries and the South Wing of the buildings. Two or three points from the speeches are well worth noting.

Lord Rosebery said: Here there is a College now which yields to few colleges in the world in its appliances, situated in the midst of the greatest metropolis in the world, educating and rearing hundreds and hundreds of students, the centre of one form of University life in this metropolis. . . . And it is not only this College that has made such an advance in London, but the whole of London at this moment seems, in one form or another, to be teeming with University life. All this life is drawn irresistibly to the University of London. To enumerate the schools of this University would take up more time than I should like to occupy this afternoon, but they are springing up almost annually, and all, or most of them, are affiliated to the University of London, and as time goes on we shall, I think, see many more; and, indeed, if this constant affiliation did not take place, though it may alarm some with the craven fear of being too great, yet such is the energy of University feeling in London that I verily believe you would run the risk of a second University in London if the University of London did not affiliate the institutions that are anxious to join it. When I read this long list of schools, when I survey this forceful life to which we cannot shut our eyes, I am sometimes tempted to ask myself if the machinery of our University is adequate to the great strain that is being put upon it by the multiplication of the institutions that are under its fostering care. It is quite true that that machinery is not old, but new circumstances are constantly arising, the conditions of our University are constantly changing, and the machinery which in other Universities would be regarded as new, in our University is apt much sooner to become superannuated. . . . I sometimes doubt, if we are to undertake new tasks and burdens, whether our constitution is sufficiently receptive and elastic to undertake them. It is quite true that we are not

an ancient University. We have not all the power that tradition gives, all the splendour of antiquity and the veneration of those other qualities a University inspires. But we have the advantage—a counterbalancing advantage which, in my opinion, outweighs those qualifications—the vigour, the adaptivity of extreme youth—and I am myself extremely anxious that we should not lose the advantage which that quality of youth gives. We are a new bottle into which new wine can be abundantly poured without risk. We are a new garment which does not fear the newest patch upon it, and, I think, when we face our great task—because in some respects no University has ever undertaken a more gigantic task than the University of London—we should take full advantage of the strength and adaptivity which our youth gives us. We should not be afraid of revising or readjusting our methods to meet the needs and the calls of the day. We should court the testing of our methods and our systems, so that, if anything is to be learned by that testing, we should profit by it.

Lord Reay said: When we see these new buildings which have been opened to-day we cannot forget the excellent work that has been done in the past by our professors and by our students in very inferior buildings and with very inadequate room. Years before we were incorporated, whilst London had only a University in name—only a University which examined—we here within these walls were keeping the flame burning, and we, at all events, prevented the great reproach being cast on the metropolis of the Empire that there was no intellectual centre worthy of the University [? the city]. . . . There are two principles to which this College has always declared its firm adhesion, and those two principles, I think, will be maintained. The first principle is that the prosperity and the vitality of this institution depend, in the first place, on the staff of its professors, and that, therefore, on the selection of the professors rests one of the fundamental acts which are to secure that prosperity. We have always been, as you know, most fortunate in the selection of our professors; only I am sorry to say that we have not been equally fortunate in keeping them and retaining them here, and, perhaps, that is the result of our selection being so good. When other attractions have been offered, I am sorry to say, they have left us. I hope that, in the future, we shall make the conditions that exist in the struggle for intellectual life in this College so attractive that, whatever temptations are held out to them, we shall be able to retain them. The other principle is that, in connexion with the University, everything depends upon the teaching, and that, if the teaching is good and the examinations are in harmony with the teaching, you may depend upon it that both teachers and examiners will have a light task. On the other hand, if our teaching is defective, however admirable our examinations may be, you will not obtain the result and the harvest that you require. Well, I hope that those two principles will remain, whatever else may happen with this college.

The Provost (Dr. Gregory Foster) said: I desire, my lord, in the name of the Professorial Board, to thank you for the allusions which you have made to the great work that has been done here in the past; but I desire even more heartily to thank you for what you have said with regard to the future. We feel here very strongly that the present machinery of the University is not adequate to the great task that it has before it—that those who reconstructed the University in the years 1899 and 1900 had no conception of the growth that would take place on the coming together of the various institutions of London; and therefore, in saying that our present machinery is inadequate, I do not in any way wish to cast a slur upon the work which was done by those commissioners; but I would assure you, my lord, that, in the suggestion which you have made of some modification of machinery to suit the new conditions, you will have the warm and appreciative sympathy and help of the Professorial Board here. There is one further point that I should like to make in connexion with the words that have been said about our work here, and it is this: that, while we may look back with a certain degree of satisfaction on the past, we who are concerned with the daily work here are from time to time oppressed—I think that I may almost say oppressed with a deep oppression—that we have not the means to meet all the calls that are made upon us. There are, I know, at the present time, at least a score of different pieces of new work that we could undertake here if the means were only provided for us; and I venture to believe, my lord, that your visit here to-day will help London to realize the great opportunities that it has in its various University centres, and that Londoners will put them in a position to meet the daily demand that is made upon them.

### THE TEACHERS' REGISTER.

#### FINAL REPORT OF THE COUNCIL.

(JANUARY, 1907, TO MARCH, 1908.)

UNDER the terms of the Order in Council of August 12, 1907, the Teachers' Registration Council ceased to hold office on March 31. The Report for 1907 has, therefore, been extended so as to cover the fifteen months to that date. The total number on the Register on February 14 last was: men, 5,782; women, 5,877. One name had been removed from the Register, 3,193 names were rejected, and 141 were withdrawn. From January 1, 1907, to February 14, 1908, applications under Column A had been received from 2 men and 13 women; the total number registered under Column B was 18 men and 15 women; the total number rejected, 6; and the total number withdrawn, 3. Applications received after February 14 stand referred to the incoming Council. The Council in their observations state that, at the date of the last report, applications for admission to the present Register had already sunk to a negligible number, and the likelihood of any revival of interest in registration was far from being assured. Still, it was gratifying to note that the recent action of Parliament had improved the outlook for the future and had been welcomed by the leading associations of teachers. Clause 16 of the Education (Administrative Provisions) Act, 1907, had settled a question on which the opinion of teachers had been seriously divided, and loyal acceptance of the decision of the profession should so far clear the ground for fresh consideration of the many problems which would have to be solved. The Council appreciated the fact that the prospective conditions of registration, in so far as they were outlined by the Act, were in harmony with the views which they had from time to time urged upon the Board; and they were, moreover, fully in sympathy with the enactment which committed the framing of a scheme under those conditions to a professional Council. It was felt that at this juncture further examination of the policy embodied in the Order in Council of March, 1902, would serve no good purpose. Those difficulties of principle which arose from the attempt to differentiate between teachers solely on the ground of the nature of their professional experience had been removed from the field of controversy. It would be premature to attempt to formulate definite regulations for the future Register before the new professional Council had been established. On the other hand, the provisions of the Order in Council dealing with the administration of the Register had given rise to certain practical difficulties, the pressure of which must still continue to be felt. Two were of sufficient importance to call for attention.

In summarizing the financial results of the working of the Register since its establishment in 1902 the Council state that, with the exception of trifling sums received under other heads, the income of the Council had been restricted to the fees paid by applicants for Column B. Those fees, together with the interest accruing therefrom, had amounted to close on £12,700, from which sum working expenses to an approximate total of £9,900 had been defrayed. Hence, on March 31, the balance standing to the credit of the Registration Fund would be roughly £2,800. It had not been possible to undertake the issue of a printed Register, as originally contemplated. That would have entailed heavy liabilities which the Board could not see their way to sanction. Of the total receipts from fees, a sum of £2,678—approximating to the balance now in hand—was furnished by applicants under a temporary clause, Regulation 5 (2) (b), which offered exceptionally lenient conditions not likely to recur; the fees of applicants who satisfied the permanent requirements of the Order had amounted to £305. By how much the latter sum would have been increased if the work of registration had not been checked, it was difficult to say; but, on the expiry of the temporary regulations, the subsequent annual income accruing from Regulation 3 would, even under the most favourable circumstances, have proved insufficient to cover the current expenses of the Register, and a steady drain on the funds in reserve must have ensued. The Council thought it desirable to emphasize those points, since it seemed improbable that any practical reconstruction of the Register could succeed in removing all risk of financial strain in the future. So long as unregistered teachers continued free from legal disabilities, it was likely that the registration fee of teachers would have to remain moderate as compared with that charged for admission to other more closely organized professions. In the Council's view, it would be disastrous if their successors should be impelled, from financial

considerations, either to admit imperfectly qualified candidates or to charge too high a registration fee.

The Council trust that the Board will recognize that the Register, if it aim at maintaining a high state of educational efficiency, cannot be self-supporting under the present conditions of the teaching profession. Had the present Register continued in existence, the Council say it must have been necessary to increase the machinery provided for its conduct. The Council lacked authority to remove from the Register the names of deceased teachers, nor did they possess any means by which the names of such persons, alterations in the names and addresses of other registered persons, and records of additional experience and qualifications could be regularly ascertained. The imposition of the small fee required under Regulation 10 had been found to deter registered teachers from keeping their record up to date. In the case of the Medical Register, the difficulty had been diminished by the fact that the death of a medical practitioner was officially notified to the Medical Council, and further by the terms of the Medical Act itself, under which the names of practitioners who failed to reply to an inquiry form issued by the Registrar were periodically erased, though they might subsequently be restored by direction of the Council. Unless some similar arrangement could be carried out in respect of registered teachers, it was difficult to see how the practical utility and authority of a Teachers' Register could be adequately safeguarded. Again, the procedure laid down by the Order in Council with regard to the issue of documentary evidence of registration must eventually have been modified. The Council urge in conclusion that, as Parliament had not yet seen fit to enforce registration by direct statutory sanctions, the purpose which a Register of Teachers could serve must continue to be dependent on the measure of practical sympathy extended to it by the Board. If such driving power as the administrative action of the Board can supply was lacking, the effort to improve the status and promote the unification of the profession through the medium of a reconstructed Register must lead to fresh disappointment. The Report ends with an expression by the Council of their grateful recognition of the help and courtesy of the Board during their six years of service, and their acknowledgment of the valuable services rendered to them by the members of their present staff.

#### EDUCATIONAL OPINION.

At a meeting of representative educationists, held at the College of Preceptors (February 29), there were present delegates from the following educational Associations:—Head Masters' Conference, Head Masters' Association,\* Head Mistresses' Association,\* Assistant Masters' Association,\* Assistant Mistresses' Association,\* Preparatory Schools Association,\* College of Preceptors,\* Private Schools Association,\* National Union of Teachers, Teachers' Guild, Association of Technical Institutions, Associations of Teachers in Technical Institutions.

The Associations marked \* were represented by their delegates to the Federal Council. Canon Bell attended as Chairman of the Federal Council.

Canon Swallow and Mrs. Bryant, D.Sc., attended by invitation and not as delegates.

The following resolution was accepted unanimously as a whole, each item in it having previously been put to the meeting as a separate resolution.

The Registration Council, representative of the teaching profession, as contemplated by the Education Act of 1907, should consist of the following members:—

- One representative of the Head Masters' Conference.
- One " " Incorporated Association of Head Masters.
- One " " Head Mistresses' Association.
- One " " Incorp. Association of Assistant Masters.
- One " " Assistant Mistresses' Association.
- One " " College of Preceptors.
- One " " Preparatory Schools Association.
- One " " Private Schools Association.
- One " " Teachers' Guild.
- One " " Asso. of Teachers in Technical Institutions.
- One Principal to be nominated by the Association of Tech. Institutions.
- Five representatives of the National Union of Teachers (viz., one representing the Union as a whole, and four representing various classes of elementary teachers—namely, one head masters, one head mistresses, one assistant masters, and one assistant mistresses).

Six members nominated by the Crown (who, it is prayed, should be persons experienced in teaching to represent the Universities, and of whom three should be women).

The Council as above constituted to have power to add to its number not more than three co-opted members.

It was further agreed that the above resolution should be printed and copies sent to one delegate from each Association, who should endeavour, within a fortnight, to procure the assent of his or her Association.

#### MR. MCKENNA'S ATTITUDE.

Sir William Anson asked the President of the Board of Education (March 25) what steps were being taken towards the formation of a Registration Council, with a view to the establishment of a Register of Teachers, as provided by the Education (Administrative Provisions) Act of last session.

Mr. McKenna replied: In view of the terms of Section 16 of the Education (Administrative Provisions) Act, 1907, which contemplated the establishment of "a Registration Council representative of the teaching profession," and assigned to such a Council, and not to the Board of Education, "the duty of forming and keeping a Register," I have thought it best to await an expression of views from as many sections as possible of the teaching profession. I was informed almost immediately after the passing of the Act that a considerable number of influential bodies in the teaching profession were going to hold a series of conferences with a view to arriving, so far as possible, at some agreed lines upon which such a Council might in their view advantageously be formed. I have only in the last day or two received information as to the points of agreement reached at these conferences, and I am considering this information, with a view possibly to seeing some of the representatives of the bodies who have been meeting, and also to discovering whether the proposals appear to command the support of "the teaching profession" of which the new Registration Council is to be "representative" under Section 16 of the Act.

## REVIEWS.

### THE EUROPE OF LOUIS XIV.

"The Cambridge Modern History."—Vol. V., *The Age of Louis XIV.* (16s. net. Cambridge University Press.)

The long reign of Louis XIV., characterized by a system of absolute government, covers roughly the period of European history treated in the present volume and represents fairly the trend of policy favoured by the large majority of contemporary rulers. During this period, indeed, there were only three important States that held themselves free from the yoke of despotism—Poland, the Dutch Republic, and Great Britain; and the contrast is remarkably instructive. Louis himself gains his prominence not from any personal ability or achievement, but merely as the artful figure-head of the most powerful State that practised the prevailing principles of autocratic government and as a cunning schemer of aggression upon neighbouring territories. "The pretences with which Louis XIV. was supplied for his long series of encroachments within the boundaries of the Empire, for his attempt to annex the Spanish, and for his subsequent invasion of the United, Netherlands, are discussed in different parts of this volume, together with the history of French intervention in the affairs of other European States; and the pacifications and other agreements and alliances which mark the successive stages of alternating advance and retreat in the progress of the French schemes, necessarily call for exposition and comment." The united resistance of Western and Central Europe inevitably brought Louis to his bearings, and the political ascendancy of France in Europe is, at the close of the period, naturally "a thing of the past." Her true ascendancy lay in other fields, notably in literature, as M. Faguet shows, somewhat sketchily, in a brief chapter. The foreign policy of Louis, however, was but one of the principal determining causes of the international relations of the European States. The Eastern Question also played its part: it took a war of fourteen years (1684–98), ending in the Peace of Carlowitz, to free Europe temporarily from "the Turkish terror." Largely useful for the designs of Louis, it bore very seriously upon the Empire, Hungary, Poland, and Venice. Moreover, there was the great Swedish or "Northern" War, which ran a course of twenty-one years, stripped Sweden of the hegemony of the North and of all her pretensions to be considered a Great Power, incidentally proved the impotence of Poland, and transferred the Baltic predominance to Russia.

The great and varied movements of the time refuse to group

themselves under a formal unity, and yet the real organic connexion is considerably more extensive and intimate than appears on the general aspect. At the same time, the unity of the volume is an insignificant matter in comparison with the efficient narrative of the characteristic groups of events with due appreciation of their radical causes and of their essential results. Such unity as may be evolved in the process is all the unity that one is entitled to expect: a history is not necessarily a drama, however dramatic some of its elements may be. Besides a clear account of the general government and of the foreign policy of Louis XIV. and of the Gallican Church in his time, we have a full and competent treatment of the Revolution in Great Britain (with the events leading up to it and the religious conditions effecting it) and of English enterprise and development in the colonies and in India; of the administrations of John de Witt and William of Orange, and of the Anglo-Dutch Wars; of the War of the Spanish Succession; of the rise and advance of Russia, including the career of Peter the Great; of Charles XII. and the Great Northern War; of the origins of the Kingdom of Prussia and its history down to the death of Frederick I.; and of the Eastern events resulting mainly from the pressure of the Turkish power. Moreover, the political survey is supplemented by various chapters on intellectual progress—on the literature of France and of England, on religious opinion (and especially on the emergence and growth of the principle of toleration), and on the developments of the ideas distinguishing the modern from the ancient and mediæval treatment of science. The multifarious subjects are all handled with such knowledge and breadth of view as to place the volume on a level with the best of its predecessors. The usual bibliographies, &c., are supplied in ample fullness and with discrimination and care.

### THE VICTORIAN PERIOD.

"The Political History of England."—*The History of England during the Reign of Victoria (1837–1901).* By Sidney Low. M.A., Fellow of King's College, London, formerly Scholar of Balliol College, Oxford, and Lloyd C. Sanders, B.A. (7s. 6d. net. Longmans.)

We may say at once that any apprehensions that may have existed as to the impartial handling of political events largely within the recollection of living men may be peremptorily dismissed. We do not think that it would be possible to put one's finger upon any paragraph in this volume and to say reasonably that it indicates the party spirit of the writer. And yet the origins and the development of the various questions that have struck out so much partisan heat are historically presented, with reticences no doubt, but still without sacrifice of essential truth. There could be no greater tribute, we conceive, to the discretion and the ability of the authors, and we have special satisfaction in recognizing the fact that they adopt the attitude of historians and not of politicians. In some quarters there will now probably be objection to the general title of the work as not properly applicable to the particular period. We do not know whether the authors consciously felt this difficulty, but at any rate they specifically indicate it in their very first sentence: "We are at the threshold of a fresh stage in the history of England and the British Empire." This question of convenience as against accuracy we merely note by the way, though its influence on national susceptibilities is by no means to be ignored. Apart from such considerations, the latest period of the national history presents other difficulties: the extraordinary development of the scope and the energy of political action; the enormous mass of accessible materials; and the inaccessibility of the inner and secret motives and processes that are no doubt, in part at least, stored up in archives. The last half-dozen years of the late Queen's reign are comparatively compressed, and social and industrial legislation (together with a brief literary survey) is, with some outstanding exceptions, relegated to a summary in a final crowded chapter. The great political movements, however, are very adequately described, as well as the foreign policy, the military operations, and the main social questions demanding political solutions. The style is easy and agreeable.

The general view of the political panorama is an adequate and trustworthy presentation. Evidently great pains have been taken with the details, not only to prevent the inevitable compression from working inaccurate effects, but generally on individual points. The statement that "the East India Company ceased to be the body nominally responsible for the government" of India in 1858 might well have been rendered clearer by an explanation of what the word "nominally" involves for the

responsibility of the Company had long ceased to be anything but nominal. Without detracting from the honours of any of the heroes of the Mutiny, we cannot but think there should have been found room for a sentence marking the distinctive services of the chief engineer in the fall of Delhi. Roberts's "great march" from Kabul to Kandahar is still made to overshadow Stewart's still greater march from Kandahar to Kabul. But it is ungracious to put any stress on such points in view of the general excellence of the workmanship. The volume should be widely read: the school histories have so little to say about recent times, and current politics pass so quickly into forgetfulness. There is the usual appendix of selected authorities, and another appendix showing the personnel of the Cabinets of the reign; and there are three serviceable maps, showing the Parliamentary representation 1867-85 and after 1885, and the British possessions all over the world in 1837 and 1901, the extreme years of the period.

RICHARD WILSON.

"The Makers of British Art." Edited by James A. Manson. *Richard Wilson, R.A.* By Beaumont Fletcher. (3s. 6d. net. Walter Scott.)

Mr. Manson's popular series of monographs on great British painters has grown into a small library, now exceeding a dozen volumes, and furnishing an instructive biographical and critical survey of a large portion of the field. Mr. Fletcher, with generous sympathy, has sought out a hero whose fame has always been less than his deserts. In spite of Wilson's originality and exquisiteness in landscape—Ruskin finds that with him the genuine art of landscape really began for England—he yet missed both the fame and the fortune that fell to other artists not his technical superiors. Mr. Fletcher does not claim more than mediocrity for Wilson's portraiture, but he makes out a strong case for his landscape painting. He investigates fully the personal considerations that entered so largely into the strength and the weakness of Wilson, and sets forth the relation between the personality and the art of the painter. The biographical facts, which are somewhat scanty, have been diligently gathered from all available sources and have been critically sifted; so that here we have the fullest and most trustworthy account of the life of the artist. Incidentally, also, there is much interesting matter illustrative of the artistic world in which Wilson lived and worked. The pictures of Wilson are critically reviewed in the light of artistic principles and of the circumstances of their production. "His finest pictures are undoubtedly those representing Italy, or subjects associated with Italy"; and we are inclined to think that Mr. Fletcher is at his best in the description of the Italian period. Wilson, "the father of British landscape," was a Welshman: "he was of pure Celtic origin, sprung of the stock of ancient royalty, born and bred amid scenery recalling historic happenings, and trained to look on the past, through the classic literature, with some of the thoughts of the classical people themselves." The tracing of the influences of "stock" and of "environment" is a very interesting element in the volume—a most delicate and difficult subject to handle, yet essential in the circumstances. On the whole, Mr. Fletcher emerges from the ordeal with much credit; and, if there are occasional repetitions, they may be needed to emphasize aspects that have been comparatively neglected.

Information of a statistical character is thrown into appendixes, and there are 20 plates admirably representing examples of Wilson's art, and a frontispiece reproduced from the original portrait of the artist by himself, now in the Diploma Gallery of the Royal Academy. Mr. Fletcher writes with discrimination in simple and lucid style, and his work challenges a reconsideration of the real artistic merits of Richard Wilson, based on study and sympathy rather than on tradition, and conducted apart from the deflecting influences of personal idiosyncrasies and social surroundings.

#### THE MICROSCOPE.

*Microscopy: the Construction, Theory, and Use of the Microscope.* By Edmund J. Spitta, L.R.C.P. Lond., M.R.C.S. Eng., &c., President of the Quekett Microscopical Club. (12s. 6d. net. John Murray.)

Mr. Spitta has followed up his well known and highly appreciated book on "Photomicrography" by a very substantial and practical volume on "Microscopy," covering the whole field. He anticipates that lecturers and demonstrators in all sorts of

scientific laboratories may save a great deal of their valuable time by referring their students to his exposition instead of teaching them the rudiments of the microscope by word of mouth; and that private workers also may be assisted to use the instrument to the greatest possible advantage. We have no doubt that in both ways his work will prove eminently advantageous. Mr. Spitta begins at the beginning, with a brief explanation of the general properties of lenses, whether as hand-magnifiers or as hand-microscopes. For more advanced students he describes fully the method of testing objectives and condensers, giving special attention to the use of the Abbe test-plate. Further, he attacks the more recondite problems of microscopy, such as "the estimation of the magnifying powers of objectives and oculars by the 'rational' method as well as by the system devised by the late Prof. Abbe; the explanation of what is really meant by the expression Numerical Aperture; upon the art of obtaining and using Oblique Light, with the theory involved in so doing; the importance of the proper use of the Substage Diaphragm; the selection and special adaptability of objectives of certain focus and numerical aperture for particular purposes; as well as an explanation of the real difference existing between the semi-apochromatic and apochromatic combinations." Moreover, in view of the special requirements of students in particular branches of the subject, he devotes a chapter to the different kinds of apparatus suitable for different investigations. And, to meet the case of the strictly philosophical student, he has obtained the expert assistance of Mr. A. E. Conrady, who expounds the principles underlying the formation of the highly magnified microscopical image, more especially of minute objects of periodic structure so small as to be commensurate with the wave-lengths of light. The volume thus appears to be thoroughly comprehensive, as it is thoroughly well informed. The exposition is lucidly disposed, scientifically exact, and simply expressed. Besides the frontispiece, there are 16 plates containing 47 half-tone reproductions from original negatives, and 215 figures in the text, all of them printed with special care and with excellent effect. The work is a solid practical contribution to the study of a scientific instrument of the utmost importance.

#### GEOMETRICAL METHODS.

*Plane Geometry.* By Charles Davison, Sc.D., and C. H. Richards. M.A. (4s. Cambridge University Press.)

In an age when there is such a pressing demand for a revision of the entire scheme of mathematical teaching, and (in so far as the subject treated in this book is concerned) of the teaching of geometry in particular, works greatly varying in excellence are constantly being written on the new lines. These all lay special stress on the value of practical and experimental work, so much so that the attraction of the theoretical side is apt to be somewhat overshadowed. Consequently, to the lover of Euclid holding comparatively conservative views on the matter, the present work will furnish a welcome contrast. The authors fully concur in the opinion that preliminary training in practical geometry is both necessary and valuable, and they take for granted a first course of the kind before their treatise is used; but they also plead the cause of theory which serves as an inspiration to the intelligent pupil; and, whilst giving due weight to the best modern ideas—for example, the use of hypothetical constructions and the separation of problems and theorems—they do not travel unnecessarily out of Euclid's road. The language of the text of the new work is precise and such as will be followed without difficulty. Some propositions are, perhaps, a little wanting in fullness, and it is therefore not out of place to draw attention here to the imperative necessity in the junior text-book for absolute completeness of reasoning, now that writers on geometry dispense with the numerical references to Euclid's propositions. Granted that constant repetition is irksome to those who can call up mentally the reason for every successive statement, and that there are limitations as to size which must be considered in the production of an elementary text-book, yet the junior student must by some method support his assertions one by one as he makes them. The plan of the present volume is good. Whilst the leading propositions appear in the form of bookwork, others scarcely less important are discussed as worked riders. A full complement of exercises for individual practice in original solution is, moreover, included, the questions being sometimes set as exercises on special propositions, and sometimes classed together as miscellaneous problems and theorems.

## GENERAL NOTICES.

## SCIENCE.

*Elementary Science for the Certificate and Preliminary Certificate Examinations. Section A., Chemistry.* By H. W. Bausor, M.A., late Scholar of Clare College, Cambridge. (2s. Clive.)

Mr. Bausor addresses himself specially to the requirements of the Board of Education Syllabus for the particular examinations in view, assuming a knowledge of the subjects of the "Introductory Section," which were admirably handled in a previous volume of the series. The treatment is mainly practical. Six chapters investigate experimentally the properties and interactions of important substances; the remaining four go on to the Atomic Theory, Gay-Lussac's Law of Volumes, Avogadro's Hypothesis, Chemical Equivalents, Valency, and Chemical Calculations. The exposition is pointed and lucid; each chapter is followed by a summary and a judicious series of questions; and there are useful appendixes, over 160 experiments, and 40 figures. A thoroughly well conceived and well executed work.

*An Elementary Treatise on Theoretical Mechanics.* By J. H. Jeans, M.A., F.R.S., Fellow of Trinity College, Cambridge, and Professor of Applied Mathematics in Princeton University. (10s. 6d. Ginn.)

Prof. Jeans writes primarily with a view to emphasize the fundamental physical principles of the subject. He necessarily uses mathematical analysis, gives practical applications in illustration of principles and results, and provides abundance of problems; but all these are subordinate and contributory to the elucidation of the fundamental physical principles. Whatever may be the future special field of study, there can be no serious question of the propriety of this procedure. The author's name guarantees that the treatment is masterly. There are 156 figures, and the volume is substantially got up.

*How to Study Geology.* By Ernest Evans, Natural Science Master, Municipal Technical School, Burnley. (3s. 6d. Swan Sonnenschein.)

The volume is well adapted to the Board of Education Syllabus, Stage I.; but at the same time it forms a practical and most helpful guide to all beginners in the study of the subject. The explanations are concise and clear and the matter is carefully arranged; practical work is proposed in large and judicious selection; testing questions are appended to each chapter; and there are 82 experiments and 112 illustrations. Both in theory and in practice the work is based on many years' teaching of numerous students. A very able and useful book.

*An Elementary Course of Practical Zoology.* By the late T. Jeffery Parker, D.Sc., F.R.S., Professor of Zoology in the University of Otago, and W. N. Parker, Ph.D., Professor of Zoology, University College, Cardiff. (10s. 6d. Macmillan.)

A second edition of an excellent work. Some parts have been extended and various minor modifications have been made as suggested by practical class experience during the eight years that have passed since first publication. The types are judiciously selected and most effectively described with the aid of 167 illustrations, and the practical directions are admirable.

Among new editions we note with satisfaction (1) *The Principles of Physics*, by Alfred P. Gage, Ph.D., revised by Arthur W. Goodspeed, Ph.D., Professor of Physics in the University of Pennsylvania—a substantial and lucid work, with numerous problems and exercises and 420 figures (6s. 6d., Ginn); (2) a third impression (second edition) of *The Higher Text-Book of Magnetism and Electricity*, by R. Wallace Stewart, D.Sc. Lond.—being Vol. IV. of "The Tutorial Physics" series—a comprehensive and capable volume, with abundance of examples and 385 figures (6s. 6d., Clive); (3) a fifth edition of *Properties of Matter*, by the late Prof. P. G. Tait, edited by W. Peddie, D.Sc., F.R.S.E., Harris Professor of Physics in University College, Dundee—a highly appreciated work carefully brought up to date (7s. 6d., A. & C. Black); and (4) a third impression (second edition) of *The Certificate General Elementary Science, Part I., Physiography*, edited by William Briggs, LL.D., M.A., B.Sc., &c.—an excellent volume, specially rewritten to meet the requirements of the Board of Education Syllabus.

## ENGLISH LITERATURE.

"The Oxford Poets."—(1) *Shelley*. Edited by Thomas Hutchinson, M.A. (2) *Campbell*. Edited by J. Logie Robertson, M.A. (3s. 6d. each. Henry Frowde.)

The Shelley volume includes materials "never before printed in any edition of the poems." Mr. Hutchinson, who recently gave us an admirable edition of Wordsworth in the same series, has again performed his editorial task—a much more difficult task this time—with patient assiduity and conspicuous success. Youthful readers will be amused, and perhaps gratified, to learn how indifferent Shelley was about spelling and punctuation. The Campbell volume, though not including absolutely "everything metrical that Campbell wrote," yet gives

"considerably more than any previous edition contains," and omits "nothing that deserved to be included." We confidently anticipate that this carefully and sensibly edited edition will help to assuage Mr. Logie Robertson's "mingled surprise and indignation," and lead a later generation to "do more honour to the poet's memory than we have done." Like Shelley, Campbell made a poor job of his punctuation: as Dr. Beattie remarks, the art of punctuation "was one of those mysteries which the poet could never comprehend." The poets, however, are permitted to be ignorant or careless in details; and Mr. Robertson, who is both a teacher and a careful poet, comes to the rescue. Both the volumes are most ably and efficiently edited, beautifully printed, and chastely bound.

*The Main Tendencies of Victorian Poetry: Studies in the Thought and Art of the Greater Poets.* By Arnold Smith, M.A., Assistant Lecturer in English Language and Literature at the University College of South Wales and Monmouthshire. (5s. net. St. George Press, Bournville, Birmingham. London: Simpkin, Marshall, Hamilton, Kent, & Co.)

Mr. Smith attempts "to portray the main tendencies of an epoch as exemplified in the writings of its greatest poets, and also, conversely, to discuss the relation in which each of these poets stood to his age, to find out by what qualities he is most distinguished, and to elucidate the peculiar merits of his style." "The main treatment is centralized around their attitude towards the problems which have chiefly interested men in the nineteenth century, especially those of the existence of God and the immortality of the soul." The volume has grown out of Extension lectures, and will be suitable for similar purposes. The chapters are informatory as well as critical, and the criticism is not too penetrating or subtle for the average understanding. The style is free, and there is a tendency to repeat the same meaning in different form or forms. The handling will be helpful and suggestive to students that have read some substantial part of the works discussed.

*Types of Tragic Drama.* By C. E. Vaughan, Professor of English Literature in the University of Leeds. (5s. net. Macmillan.)

In this volume Prof. Vaughan reproduces, with some expansion and addition, a course of lectures recently delivered to a general audience in the University of Leeds. The subjects range from Aeschylus to Ibsen, embracing outstanding examples of classical and romantic tragedy. The treatment is popular, of course, and on broad lines: the very types "have to be treated rather as landmarks in the general growth and development of the drama than on their own intrinsic merits." Prof. Vaughan speaks from comprehensive knowledge: we wish we could believe that his audience was prepared to follow him, by reasonably adequate preliminary acquaintance with the works he discussed—Greek, Latin, French, German, Italian, Spanish, Norwegian—even though most of them are accessible in English versions. However this may be, the lectures are stimulating and instructive. The limitations are inherent in the circumstances, and should have been understood without the weak apologies of the preface.

## ENGLISH READERS—LOCAL AND DESCRIPTIVE.

*The English Counties* is expressly designated "a series of supplementary readers" (8d. each. Blackie). The aim is "to quicken the interest of the pupils in their immediate surroundings, to direct their attention to the connexion to be observed among certain of the facts of their experience, and to make the school excursion, whether for Nature study or the practical study of geography, more interesting and more serviceable." We have (1) *Kent*, (2) *Surrey*, (3) *Upper Thames Counties* (Oxford, Berks, and Bucks), and (4) *Cumberland, Westmorland, and Furness*. The volumes present the salient features of the history and geography of the particular districts in simple language and direct manner, and they are liberally illustrated. The type is good, and the binding substantial. Each volume should be interesting outside as well as inside its own district.—Messrs. Blackie have also just issued *Dorset: a Reading Book for Schools*, by H. Harding, Dorset County Education Official, Certificated Master (1s.). It is agreeably written, and well illustrated; and the principal matters of interest are described systematically and in due proportion.

*Cambrensis*, edited by W. Jenkin Thomas, M.A., Head Master of Aberdare County School (1s. 6d. Edward Arnold), is "a library reading book for Welsh Schools," intended for the higher standards of elementary and the lower forms of secondary schools. It consists of varied and most interesting extracts "from the works of Welshmen who have attained distinction in literature other than Welsh and from the mass of literature written by Englishmen and others about Wales and Welshmen." We should hope that the reading of it will not be restricted to Wales. Mr. Thomas has done his work admirably.

*Our English Towns and Villages*, by H. R. Wilton Hall, Library Curator, Hertfordshire County Museum (1s. 6d. Blackie), "is intended as a reader, not as a text-book to be worked up for examination purposes," but it will be a valuable companion to the ordinary history book in the hands of older scholars. Though not pretending, of course, to be exhaustive, it furnishes a great deal of most useful information about many things mentioned in histories too often without adequate

explanation—about houses (from the cave-dwellers downwards), churches and monasteries, towns and castles, tythings and hundreds, vills and villages, fairs and markets, schools and universities, ways of life of rich and poor, business and government, &c. It will serve greatly to arouse and partly to satisfy interest; it is most suggestive throughout. It will certainly do much to cover the dry bones of history "with flesh instinct with life and vigour." There are numerous pertinent and effective illustrations.

Book III. A of *Arnold's Home and Abroad Readers* (1s. 6d.) is a supplementary descriptive volume, taking the reader over the British Isles, and pointing out the most interesting and important things, natural, historical, industrial, &c. The matter is methodically disposed, and the style is simple and agreeable. There are numerous good illustrations.

*The Story of Exeter*, by A. M. Shorto (1s. net. Exeter: Commin), fills a considerable volume "for use in schools." It implies some general knowledge of English history on the part of readers, although the author tries to supply all that is required. How interesting the story is may be inferred from the concluding remark of the writer: "As we walk through the streets and see the old Guildhall and older Cathedral, even as we say the name Exeter, and remember that there was an older name still, we feel that this our city has a glory which we would not exchange for the riches of the most prosperous town in the country." The book is well written, well printed, and well got up; and it has 10 good full-page illustrations.

#### EASTERN LANGUAGES.

*Initia Amharica: an Introduction to Spoken Amharic*. By C. H. Armbruster, M.A., Sudan Civil Service, late of H.M. Administration, British Central Africa, sometime Minor Scholar of King's College, Cambridge. Part I., *Grammar*. (12s. net. Cambridge University Press.)

This handsome volume is the first of a series intended to enable students to acquire a colloquial knowledge of spoken Amharic, the predominant language of Abyssinia at the present day, and a language of commerce in the adjoining Italian colonies, the French Somali Coast Protectorate, and the Eastern provinces of the Sudan. Mr. Armbruster has sensibly aimed at "giving some description not so much of what, in the opinion of learned Europeans and natives, Abyssinians ought to say as what in point of fact they do say." From the British position in the Sudan, the work will be, and will continue more and more to be, very important for civil servants, traders, and others. "It represents the first serious attempt to meet practical needs." It is sufficiently formidable of aspect: "the Amharic type includes 267 characters." "Amharic employs the Ethiopic syllabary, with additional signs representing sounds not occurring in Ethiopic." It is a development of a sister language to Ethiopic, which latter "is still in use as the ecclesiastical language of Abyssinia." "In its present state it is lacking in some most characteristic Semitic features, and those which it displays give one the impression of having been superimposed on an alien (possibly Hamitic) basis." Still, these forms seem to justify Mr. Armbruster in treating it as a Semitic language. The work obviously has involved prolonged labour and care. The plan of regularly adding to every Amharic word its phonetic spelling in Roman letters will be an immense help to students. The financial assistance of the Egyptian Government and the liberality of the Cambridge University Press deserve very grateful recognition.

*Elementary Arabic: First Reading Book*. By Frederic du Pré Thornton and Reynold A. Nicholson, Lecturer in Persian in the University of Cambridge, and sometime Fellow of Trinity College. (6s. net. Cambridge University Press.)

This is the second volume of "Thornton's Arabic Series," the first of which—the *Grammar*—we noticed very favourably in June, 1906. It contains extracts from the *Corān* (5), stories of Arabic warriors (4), historical extracts relating to Mohammed (3), and various other historical extracts (4)—all of them very suitable for beginners alike in matter and in form. An elaborate glossary is presented, and also a grammatical analysis of part of the text, both of which will be extremely helpful. The work offers excellent practice. A second reading book is in course of preparation.

*Hindustani for Every Day*. By Colonel W. R. M. Holroyd, M.R.A.S., Doctor of Oriental Learning, formerly Fellow of the Calcutta University and of the University of the Punjab, and Director of Public Instruction, Punjab. (8s. net. Lahore: Gulab Singh. London: Crosby, Lockwood, & Son.)

The object of the work is "to impart a sound practical knowledge of the Hindustani language as it is employed in daily life, more especially in intercourse between Indians and Anglo-Indians." The first Part contains twelve progressive chapters on pronunciation; the second Part, which is the main portion, works up the grammar and the construction of sentences concurrently through thirty-four chapters—a very laborious and thorough piece of work. The third Part consists of a single chapter treating the application of the Persian alphabet to Hindustani, with reading exercises. The whole work was revised in

consultation with an accomplished Maulawi. The volume should be exceedingly useful to Anglo-Indians and to students generally.

*English-Hindustani Pocket Vocabulary*. By Major F. R. H. Chapman, Instructor in Hindustani at the Royal Military College, Camberley. (Crosby, Lockwood, & Son.)

A very handy and carefully selected list of some 2,200 words likely to be most useful to English folk in India. A second edition, revised and enlarged.

*Tamil Grammar Self-Taught*. By Don M. de Zilva Wickremasinghe, Epigraphist to the Ceylon Government, Librarian and Assistant Keeper of the Indian Institute, Oxford. (5s. Marlborough.)

The grammar is concisely and lucidly expounded, the Tamil characters being judiciously accompanied by an English transliteration throughout. Some exercises in translation into and from Tamil (with a key) will very usefully impress the grammatical points, and a Tamil-English vocabulary is appended. The work will be very helpful to beginners or to such as wish to obtain some grip of colloquial Tamil within a comparatively short time.

*Egyptian Self-Taught (Arabic)*. By Capt. C. A. Thimm. (2s. Marlborough.)

This useful volume appears now in a third edition, revised and enlarged by Major B. A. Marriott, D.S.O.

#### HISTORY.

"The Story of the Nations."—*The Roman Empire* (B.C. 29—A.D. 476). By H. Stuart Jones, M.A., formerly Fellow and Tutor of Trinity College, Oxford, and Director of the British School at Rome, Ordentliches Mitglied des Kaiserlich Deutschen Archäologischen Instituts. (5s. Fisher Unwin. New York: G. Putnam's Sons.)

The series commenced with a general volume on "Rome." Some time back it included a volume on "Mediaeval Rome," and in several other volumes the influence of Rome made itself felt incidentally. There still remained ample room for the story of the Empire down to the fall of the Western branch. Mr. Stuart Jones weaves into a lucid and agreeable narrative the latest results of scholarship, marking the advances of absolutism, explaining the developments of governmental forms and methods, and estimating judiciously the more important characters and events. After the reforms of Diocletian and Constantine the story gets somewhat compressed, though it embraces the reigns of at least three great Emperors, ecclesiastical dissensions that shook the world, and the onrush of the barbarians. In legal matters Mr. Jones does not always show the same grasp and precision as distinguishes his handling of the political aspects. The Praetorian Edict can hardly be described from first-hand knowledge; nor, we suspect, could a layman gather from the statement of Hadrian's dealings with the K.C.'s of his time the real facts of the case, while the mode of expression seems not unlikely to be misleading as to the place of this class of jurists in the legal history of Rome. There are nine most useful genealogical tables, a very serviceable list of the Emperors, with dates, a full index, two excellent maps, and over fifty full-page illustrations. By the way, Mr. Jones gives no indication that there is any doubt about the authenticity of the Acerenza bust of Julian (which is reproduced in the volume). Gaetano Negri—though, for a special reason, he placed the bust as frontispiece to his first volume—refused to yield to the learned argument of M. Reinach.

"Cambridge Historical Series."—*Slavonic Europe. A Political History of Poland and Russia from 1447 to 1796*. By R. Nisbet Bain, Assistant Librarian, British Museum. (5s. 6d. net. Cambridge University Press.)

Mr. Nisbet Bain has already written several volumes and parts of volumes on the more important sections of his present subject, and Mr. Morfill's volumes, both on Poland and on Russia, are not to be forgotten, though only one of them is recorded in the bibliography to this work. Still, we dare say Mr. Nisbet Bain is right in his belief that "this book is the only existing compendium in English of the political history of Poland and Russia from the middle of the fifteenth to the end of the eighteenth century, when the Polish Republic disappeared from the map of Europe and the Russian Empire took its place as the head and right arm of the Slavonic world." The story is undoubtedly necessary to a just appreciation of the progress of affairs in the neighbouring countries of the West. The task of selection from the immense mass of materials and of disposition of the main points of a most complicated subject into a clear and connected outline of the whole panorama of events, with due prominence of the determining human factors, has evidently been both severe and prolonged. But the issue is highly satisfactory. The earlier history is admirably outlined. From the advent of the Romanovs the author is on very familiar ground, and the fall of Poland is described with spirit and with impartial firmness. "The first partition of Poland has sometimes been plausibly defended as a regrettable necessity; but no sophistry in the world can extenuate the villainy of the second partition"—"a great political crime," "wholly infamous." We may note also Mr. Nisbet Bain's remark that "it is often too much taken for granted that Peter the Great created modern Russia. The

# BLACKIE'S LIST

JUST PUBLISHED.

**Magnetism and Electricity and The Principles of Electrical Measurement.** By S. S. RICHARDSON, B.Sc., Associate of the Royal College of Science, London; Lecturer in Physics, Municipal Technical School, Liverpool. Crown 8vo, cloth boards, 5s. net.  
The object of this book is to provide a sound and systematic course of study in the main principles of Electricity and Electrical Measurement. It is written to meet the requirements of students who have already, in a first year's course, made some acquaintance with the elementary descriptive parts of the subject, and are commencing the study of Electricity in its more quantitative aspects—either as a branch of pure Physics or as a preparation for a course of Applied Electricity.

JUST PUBLISHED.

**The Teaching of English.** By A. E. ROBERTS, M.A., Principal Lecturer in English at the Islington Day Training College, and A. BARTER, L.L.A., late Head Mistress of the Braintree Pupil-Teacher School. Price 2s. 6d. net.  
Much pioneer work lies before the English teacher, and the present book is an attempt to suggest some of the lines along which he may proceed. No space has been devoted to the teaching of reading and writing as mechanical processes, since these subjects have been frequently treated of in books in school method. The emphasis has been laid on the teaching of literature and of composition.

**Readings in English History.** From Original Sources. Edited by R. B. MORGAN, B.Litt., and E. T. BAILEY, B.A.  
Vol. I.—*Caesar to Stephen.* 2s.  
Vol. II.—*Henry II. to Richard III.* 2s. 6d.  
Vol. III.—*1485 to 1688.* 2s. 6d.

**Brief Survey of British History.** By G. TOWNSEND WARNER, M.A. 1s. 6d. The best junior and middle school history in existence. In use in all Public schools and the textbook of the Royal Naval College, Osborne.

**A Brief Survey of European History.** By ARTHUR HASSALL, M.A. An excellent general sketch of European History from Charlemagne to the present time. Crown 8vo, cloth, 4s. 6d.

JUST PUBLISHED.

**A First Geography.** With Coloured Pictures and Diagrams on every page. By C. A. E. RODGERS, M.A., F.R.G.S., Assistant Master, Bradford Grammar School, and an Examiner in Geography to the College of Preceptors. Small 4to, cloth, 1s.  
An attempt to bring the actual teaching of geography into harmony with the improved theory of how it should be taught.

JUST PUBLISHED.

**Advanced Book-keeping.** For Commercial and Accountancy Classes. By WALTER GRIERSON, Author of "Practical Book-keeping for Commercial Classes." Crown 8vo, cloth, 2s. 6d. net.

**The Longer French Texts.** Printed in large type. Cloth limp, 8d. each. Brief Notes, Questionnaire, Memory List of Useful Phrases and Vocabulary. The volumes now ready are:  
*Deslys—Le Zouave.*  
*Moreau—Contes à ma Sœur.*  
*Chateaubriand—Le Dernier Abencérage.*  
*Abert—Le Roi des Montagnes.*

**The Little French Classics.** Price 4d. each book. All French authors in prose and verse, from the *Chansons de Geste* to *Daudet* and *Paul Bourget*.

**Récits tirés des Classiques français.** 6d. each. Edited by Mme. C. BAGNALL, of Clapham High School, and Mlle. VIVIER.  
The Stories of the great Dramatists told in simple French, suitable for Lower and Middle Forms.  
*Cornelle—Le Cid et Horace.*  
*Racine—Athalie et Andromaque.*  
*Molière—L'Avare et Les Femmes Savantes.*  
*Hugo—Hernani et Ruy Blas.*

**The Little German Classics.** Price 6d. each volume. The leading German authors in poetry, story, and drama.

**A Latin Course.** By E. H. SCOTT, B.A., and FRANK JONES, B.A. First Course, cloth, 1s. 6d. Second Course, cloth, illustrated, 2s. 6d.

**A First Latin Grammar.** By E. H. SCOTT, B.A., late Head Master of Boys' Secondary School, Barton, Transvaal; and FRANK JONES, B.A., Assistant Master, King Edward's School, Aston, Birmingham. Crown 8vo, cloth, 2s.

BLACKIE & SON, Ltd., 50 Old Bailey, E.C.

foundations of modern Russia were laid while he was still in his nursery." The volume is written in a very lucid and forcible style. There are three good maps, a select bibliography, and a serviceable index.

#### EDUCATION.

*Selected Writings of Thomas Godolphin Rooper.* With a Memoir by R. G. Tatton, sometime Fellow and Tutor of Balliol College, Oxford. (7s. 6d. net. Blackie.)

The selection contains nineteen essays and addresses on educational subjects. The aim of the editor has been "to include, in the first place, the most important of the author's more systematic studies in educational theory and method, and in certain subjects of school education to which he devoted special attention, and to add to these as large a selection as the limits of space allowed from those of his other writings which appear to be of most general interest and most characteristic of the writer." Every one of the papers is well worth its space. Mr. Rooper was one of the earliest advocates of Froebelian methods in our elementary schools, and later of Sloyd and all forms of manual training; and both these subjects are well represented. He was much interested also in drawing, school gardening, and geography, all of which are treated in various papers of the collection. Larger questions—the relation of teaching to the life of the children, the teaching of things as against the teaching of words, education at home as compared with education at a public school, the religious difficulty, the ideal in education, and psychological elements generally—furnish material for many most interesting and suggestive expositions. Most, if not all, of the papers have been already published, but readers will be glad to have them conveniently brought together in one volume in a permanent and well deserved record. Their special value "lies in the writer's exceptional combination of practical experience with grasp of educational theory, and in the power, which went along with this, of clear and simple exposition"; also in the impress of the author's personality. "The wide outlook, the faith in principle, the union of ideal aims with practical sense, the sympathetic insight—he writes, 'it was said of him, 'like a man and a woman rolled into one'—the understanding and love of children, the humour and gaiety of spirit, the belief in good and in human nature—these are some of the virtues which we find in his writings, and they were the virtues of the man." Undoubtedly this represents the impression of all that came into professional contact with him. Mr. Tatton supplies an adequate memoir with admirable tact and sympathy. The volume is a most engaging and valuable addition to the educational library.

*Questions d'Histoire et d'Enseignement.* Par Ch. V. Langlois. Nouvelle Série. (3fr. 50c. Hachette.)

M. Langlois publishes here for the first time in French a lecture on 'La Tradition de la France,' delivered before the University of Chicago, and a lecture on "Michelet," delivered before the University of Pennsylvania, in the autumn of 1904—both of them instructive and charming discourses. The remaining pieces have been reprinted from various periodicals. "Notes sur l'Education aux Etats-Unis" include his impressions both before and during his visit, the latter in considerable detail. "La coéducation est sans contredit le phénomène capital"; remarkable also is "le goût décidé des enfants et des jeunes gens américains pour l'école." "Il est naturel que l'école, à tous les degrés, soit aimée aux Etats-Unis, puisque rien n'est épargné pour la rendre aimable. Et c'est là, sans doute, une des leçons que le Nouveau Monde nous donne en matière d'éducation." Of the other articles the most interesting is a gently critical sketch of "Les Idées de H. G. Wells sur l'Education." Mr. Wells, as educational critic and reformer, appears to have a French double, M. P. Lacombe. A very agreeable and suggestive series of papers.

#### MISCELLANEOUS.

*Life of Goethe.* By Heinrich Düntzer. Translated by Thomas W. Lyster, Assistant Librarian, National Library of Ireland. (2s. 6d. net. Fisher Unwin.)

A popular edition of a very valuable work. Düntzer was indefatigable in gathering and sifting materials, in tracing lines and conditions of development, and generally in presenting his hero truthfully and completely. The translator has done his part ably, and he has also added many very useful foot-notes. Additional matter is given in an appendix, and there is an elaborate index. The numerous pertinent illustrations (about fifty) increase the interest of the work. All students of German literature will be grateful for such an agreeable and cheap issue of the best biography of Goethe.

*The Efficient Life.* By Luther H. Gulick, M.D., Director of Physical Training in the New York City Schools. (3s. 6d. net. Heinemann.)

Dr. Gulick justly says that the strenuous life is no end in itself: "it is only when being strenuous is an aid to efficiency that it is worth while." So with the pursuit of health. "But to live a full, rich, efficient life is an end." Accordingly he discourses briefly, but very pointedly and vividly, on the various things—mainly conditions and habits of body and mind—that tell for or against the efficiency of the individual. Dr. Gulick has plenty of sense as well as of science, and his book is worth much more than its weight in gold to any one

that has not yet learnt "how to run his physical (and mental) machinery," and is willing to learn.

*Sporting and Athletic Register*, 1908. (5s. net. Chapman & Hall.) A handsome and substantial volume of nearly seven hundred pages (9 x 6), including the results of all important events in Sport, Games, and Athletics during the year 1907, together with the records and notable achievements of past years. Part I. deals with thirty-three different departments, from Archery to Yachting. Part II. is devoted to Racing. The work is astonishingly detailed as well as comprehensive, and probably no sportsman will quarrel with its claim to be "the 'Whitaker' of the Sporting World."

#### FIRST GLANCES.

##### MATHEMATICS.

Arithmetic Test Cards, Jack's. Standards V., VI., VII. 40, 32, 32 cards. 1s. 3d. net each packet, with answers.

[Very good and serviceable series.]

Arithmetic, The Teaching of—to Simple Proportion. By J. S. Norman. 1s. net. The Yearbook Press (25 High Street, Bloomsbury, W.C.).

[Hints on methods, with types and diagrams. Lecture delivered at Conference of Head Masters of Preparatory Schools, December, 1907. "Outcome of thirty years' experience in teaching young boys." Lucid and suggestive.]

Mathematics, A Course in. By Frederick S. Woods and Frederick H. Bailey, Professors of Mathematics in the Massachusetts Institute of Technology. Vol. I. 10s. 6d. Ginn.

["For students of engineering and applied science." Vol. I. contains Algebraic Equations, Functions of one Variable, Analytic Geometry, and Differential Calculus. First year's work at an engineering school. Traditional division disregarded: "the principles of each subject are introduced as needed and the subjects developed together." Numerous problems, with answers. 219 figures.]

Mathematics, Elementary, A Scrap Book of. By William F. White, Ph.D., State Normal School, New Paltz, New York. 5s. net. Chicago: Open Court Publishing Company. London: Kegan Paul, Trench, Trübner, & Co.

["Notes, recreations, essays." "It may seem that puzzles have too largely taken the place of problems. But this is not a textbook. Moreover, amusement is one of the fields of applied mathematics." 59 figures.]

Mathematics, Preparatory. By A. Clement Jones, M.A., Ph.D., Senior Mathematical Master, and C. H. Blomfield, M.A., B.Sc., Mathematical Master, Bradford Grammar School. 1s. 6d. Nelson.

["A New Arithmetic for Junior Forms"—"preparatory to what has been usually called the first year." "An unusually large number of oral types" of exercise; "problems are the rule rather than the exception." Immense quantity of material, carefully graduated.]

Trigonometry, Theoretical and Practical; embodying Graphic and other Solutions. By B. C. Bridgett, M.A., B.Sc., F.C.S., and William Hyslop, M.A., B.Sc. 4s. 6d. Blackie.

[Treatment "based on the new and more scientific methods of geometrical teaching." Numerous examples and examination papers; answers. Many figures.]

Weighing and Measuring, A Simple Course of; including the Metric System. By H. J. Ashton, F.R.G.S. 1s. net. Philip.

[Practical handling. Examples; answers; 78 illustrations.]

Weights, Measures, and Coinage, The Metric and British Systems of. By F. Mollwo Perkin, Ph.D., Head of Chemistry Department, Borough Polytechnic Institute, London. 1s. 6d. net. Whittaker.

[Clear exposition; worked examples; 17 diagrams.]

##### HISTORY.

English History, The Abstract of. 8d. Oliver & Boyd.

[Down to the Union with Scotland. Intelligent and well written summary. Genealogical tables; 39 illustrations and maps. Very useful.]

English History, The Groundwork of. By M. E. Carter, Somerville College, Oxford, First Class in the Honours School of Modern History. 2s. Clive.

[The "salient facts," for London Matriculation; and "for class-work generally." Useful genealogical tables; 5 maps.]

English and British History, Outlines of. By E. A. Benians, M.A., Fellow of St. John's College, Cambridge. 4d. Gill.

[Revised and extended edition of the manual formerly known as "Gill's History of England, 2d." 100 lessons. Much matter well selected and clearly arranged; numerous serviceable maps.]

Great Britain, The Normal History of, 1688-1760. By Victor H. Allemandy and J. Beith. 2s. net. Normal Press.

[Pretty full, clear, and very readable. Genealogical and other tables; 5 sketch maps, somewhat meagre.]

# COLLEGE OF PRECEPTORS EXAM., 1908.

## BOOKS FOR THE SPECIAL SUBJECTS

PUBLISHED BY

### Messrs. J. M. DENT & CO.

#### ENGLISH.

**LONGFELLOW'S HIAWATHA.** With Introduction and Notes by HENRY WILLIAMS, M.A. 1s.

**THE MERCHANT OF VENICE.** Edited by R. M. WILLIAM, M.A. With Eight Illustrations by DORA CURTIS. 1s. 4d.

"This edition has much to commend it. The type is excellent, the notes concise and to the point, and the general remarks on the play are not too elaborate."—*Saturday Review*.

**JULIUS CÆSAR.** Edited by F. ARMYTAGE MORLEY, M.A., D.C.L. With Illustrations by T. H. ROBINSON. 1s. 4d.

"If the growing generation does not acquire a love for Shakespeare, it will not be the fault of editors of school books. Mr. F. Armytage Morley has furnished the play with an admirable introduction . . . comments in a style easy to be comprehended of the pupil. . . . Mr. T. H. Robinson, the artist, deserves a special word of praise."—*Scotsman*.

**MARMION.** By Sir WALTER SCOTT. Edited by R. P. DAVIDSON, M.A. (Oxon.), Assistant Master, Malvern College. With Biography, Topographical Drawings, Introduction, copious Notes, and Glossary. Crown 8vo, cloth, 1s. 4d.

#### LATIN.

**CÆSAR'S GALLIC WAR. Book I.** Edited by A. S. WILKINS, LL.D., Litt.D., late Professor of Latin, Victoria University, Manchester. With Vocabulary, 1s. 4d.

**CÆSAR'S GALLIC WAR. Books II. and III.,** in one volume. Edited by A. CROOM PATERSON, M.A. (Edin. and Oxon.), Classical Master in the Royal High School, Edinburgh. With Vocabulary, 1s. 4d.

**VIRGIL'S ÆNEID. Book I.** Edited, with Introduction, Notes, and Glossary, by Rev. H. KYNASTON, D.D. 1s. 4d.

**VIRGIL'S ÆNEID. Book X.** Edited, with Introduction, Notes, and Glossary, by H. B. WIDDOWES, M.A. 1s. 4d.

#### MODERN LANGUAGES.

*A list of new and forthcoming books in Dent's Modern Language Series can be had post free on application.*

**GERMAN DAILY LIFE.** By Dr. R. KRON. Extra fcap. 8vo, 2s. 6d. net.

**FRENCH DAILY LIFE.** By Dr. R. KRON. Extra fcap. 8vo, 2s. 6d. net.

*(The above books are prescribed by the College of Preceptors for the Oral Examination in French and German.)*

Further particulars of above and other Books for the Examination sent free on application.

**J. M. DENT & CO., ALDINE HOUSE, 29 BEDFORD STREET, LONDON, W.C.**

Great Britain, The Expansion of, 1715–1789. By Arthur Hassall, M.A., Christ Church, Oxford. 3s. Rivingtons (Text-books of English History).

[Able, lucid, and interestingly written. Genealogical and chronological tables; 7 maps.]

Mutiny, The Great, The Tale of. By W. H. Fitchett, B.A., LL.D. 6d. Newnes (Sixpenny Novels Illustrated).

[More interesting than most novels, yet as true to fact as the author could make it. A careful and stirring narrative.]

Scottish History, Outline of. By W. M. Mackenzie, M.A., F.S.A.Scot. 2s. 6d. A. & C. Black.

[Down to "The Disruption" (1843). Lucid, fluent, and trustworthy. 79 illustrations; 12 maps and plans.]

Scottish Industrial and Social History in the Eighteenth and Nineteenth Centuries, A Sketch of. By Amelia Hutchison Stirling, M.A. Edin. (1s. 6d. Blackie.)

[Cheap edition. We repeat our good opinion.]

#### RELIGIOUS AND MORAL.

A Kempis, Thomas, and the "De Imitatione Christi." By J. E. Manning, M.A. 6d. net. Galt (Manchester).

[Address at Unitarian Home Missionary College, Manchester.]

Apostles' Creed, The. By the Rev. A. E. Burn, D.D., Rector of Hands-worth and Prebendary of Lichfield, Examining Chaplain to the Bishop of Lichfield. 1s. net. Rivingtons (Oxford Church Text-Books).

[Clear, simple, painstaking.]

Bible Notes, Vol. III., The Life of Christ. By Edward Grubb, M.A. 1s. Croydon: Summer School Continuation Committee (3 George Street).

"To stimulate and guide the study of the Gospels and to indicate some of the best sources of help." Careful and suggestive. Reprinted from the *British Friend*.]

Bible Story, The: The Beginnings of the Jewish Church. By Helen N. Lawson. Revised by Frederick P. Lawson, M.A., Hon. Canon of Peterborough, Rector of Sudborough, and Diocesan Inspector for the Archdeaconry of Northampton. 3s. 6d. Macmillan.

[Covers Genesis: "The Bible has been left to tell its own story in its own way." Illustrations.]

Bible Stories for Young Readers. 1d. each. Henderson.

[Simply told; pictures every second page.]

Catechisms and Devotions for Children and Young People. By the Most Rev. Enos Nuttall, D.D., Archbishop of the West Indies. S.P.C.K.

Church of Christ, The Beginnings of the; or, The Story of the Early Church. Written for the Children of the Church by G. P. Trevelyan, M.A., and E. A. Edghill, B.A. 8d. net. Rivingtons.

[Clear and simple statement.]

Duty and Conduct, Plain Words about, for Boys and Girls at School. E. J. Arnold.

"A small code of ethical principles." Simple and sensible.]

Fallen Angels. By One of Them. 1s. Gay & Bird.

"A disquisition on human existence"—"an attempt to elucidate some of its mysteries, especially those of evil and suffering." Popular edition (eighth thousand).]

Moral Instruction, A Scheme of, for Teachers in Public Elementary Schools. Edited by E. R. Bernard, M.A., Canon of Salisbury. 6d. John Davis (successor to Thomas Laurie). Laurie's Kensington Series.

"Based on the Bible, both as to principles and illustrations." "Approved by the Salisbury Diocesan Board of Education."]

Old Testament History, Readings in. By the Rev. A. B. Whitham, M.A., Principal of Culham Training College. 2s. 6d. Rivingtons.

"The text has been confined, as a rule, to the interpretation of the Bible narrative as it stands." Primary object is "to guide intelligent boys and girls in secondary schools to grasp the connexion and unity of the different parts of the Old Testament, but, above all, to help them to understand that its real meaning and purpose are concerned with the Incarnation and the Holy Catholic Church." Notes (for the teacher). Nine maps.]

Riddle, The Old, and the Newest Answer. By John Gerard, S.J., F.L.S. 2s. 6d. net. Longmans.

[The answer of modern science to the riddle of the world. Third edition, thoroughly revised, with additions.]

Theology, The New; or, The Essence of Christianity the Flower of Freethought. By A. A. Mories. 6d. Watts.

[Claims to be "purely and frankly" both rationalist and religious. Treats of the religious instinct in the individual, in ancient thought, in Greek thought, and in Christianity.]

**MATHEMATICS.**

**16353.** (Professor R. W. GENESE, M.A.)—From a variable point P two fixed straight lines  $l_1, l_2$  are projected on to two fixed planes  $\alpha_1, \alpha_2$ . If the projections meet in a point, the locus of P is a hyperboloid of one sheet passing through  $l_1, l_2$  and the intersection of  $\alpha_1, \alpha_2$ .

*Solution by Professor NANSON.*

The planes  $Pl_1, Pl_2$  generate axial pencils which are homographic, because these planes cut the fixed line  $\alpha_1\alpha_2$  in the same point, viz., the meet of the projections. Their intersection therefore traces out a hyperboloid through  $l_1, l_2$  and  $\alpha_1\alpha_2$ . The point P has two degrees of freedom and lies on this hyperboloid, which is therefore the locus required.

**16349.** (Professor E. HERNÁNDEZ.)—Si l'on désigne par  $a$  la chiffre des unités d'un nombre, et par  $s_1$  la somme des valeurs absolues des autres chiffres, et par  $s_2, s_3, \dots, s_n, \dots$  les sommes des valeurs absolues des tranches binaires, ternaires, etc. du nombre formé par ces autres chiffres, les sommes  $a + 4s_1, a + 4s_2, \dots, a + 4s_n, \dots$  seront congrues par rapport au module 6.

*Solution by the PROPOSER.*

Quelque soit l'entier  $n$ , autre que 0, on a  $10^n \equiv 4 \pmod{6}$ , et si  $b, c, d, \dots$  sont les tranches  $n$ -ièmes à partir de la chiffre des dizaines, on a  $a \equiv a, b \cdot 10 \equiv 4 \cdot b, c \cdot 10^2 \equiv 4c, \dots \pmod{6}$ ,

et en ajoutant  $a + b \cdot 10 + c \cdot 10^2 + \dots \equiv a + 4S_n \pmod{6}$ .

Cette propriété subsiste, lors même qu' $a$  désigne la tranche formée par les  $p$  premières chiffres à droite du nombre proposé,  $p$  étant un entier quelconque.

**16382.** (M. T. NARANIENGAR, M.A.)—If forces proportional to the sides of a triangle act at any point of the N.P. circle towards the feet of the perpendiculars of the triangle, their resultant passes through the point of contact of the inscribed or escribed circle with the N.P. circle.

*Remark by Professor SANJANA, M.A.*

Let L, M, N be the feet of the perpendiculars of ABC; take

$$MR : RN = c : b, \text{ and } LQ : QR = b + c : a.$$

Then Q is always a point on the line of action of the resultant of the forces of the Question. By joining Q to the infinity of points on the nine-point circle, we get straight lines cutting the circle again in an infinity of points; and thus the resultants could not all pass through one and the same point on that circle. One of the forces must act away from the foot of its perpendicular.

**11702.** (Professor ECHOLS.)—Prove that

$$\sum_{m=0}^{n-1} (-1)^m \frac{2^{2m-1} - 1}{(2n - 2m + 1)!} B_m = 0,$$

wherein  $B_m, \dots$  represent Bernoulli's numbers.

*Solution by G. N. WATSON, B.A., and another.*

[Note.— $B_0$  is usually undefined; if we write

$$\frac{x e^x + 1}{2 e^x - 1} = \sum_{m=0}^{\infty} (-1)^{m-1} \frac{B_m}{(2m)!} x^{2m},$$

we see that it is natural to assume  $B_0 = -1$ .]

$\sum_{m=0}^n (-1)^m \frac{2^{2m-1} - 1}{(2n - 2m + 1)!} \frac{B_m}{2m!}$  = the coefficient of  $x^{2n+1}$  in the product

$$\sum_{r=0}^{\infty} \frac{x^r}{r!} \sum_{m=0}^{\infty} (-1)^m \frac{(2^{2m-1} - 1) B_m}{(2m)!} x^{2m},$$

provided  $|x| < \pi$ , so that the second series is convergent.

$$\text{This product} = e^x \sum_{m=0}^{\infty} \left\{ (-1)^m \frac{B_m}{(2m)!} \frac{(2x)^{2m}}{2} + (-1)^{m-1} \frac{B_m}{(2m)!} x^{2m} \right\}$$

$$= e^x \left\{ -\frac{1}{2} \left( \frac{2x e^{2x} + 1}{2 e^{2x} - 1} \right) + \frac{x e^x + 1}{2 e^x - 1} \right\} = \frac{x}{2} \left\{ 1 + \frac{e^{2x} + 1}{e^{2x} - 1} \right\}$$

$$= \frac{x}{2} + \frac{1}{2} \sum_{m=0}^{\infty} (-1)^{m-1} \frac{B_m}{(2m)!} (2x)^{2m}.$$

And if  $n > 0$ , the coefficient of  $x^{2n+1}$  in this series is zero; i.e., if  $n > 0$ ,

$$\sum_{m=0}^n (-1)^m \frac{2^{2m-1} - 1}{(2n - 2m + 1)!} \frac{B_m}{(2m)!} = 0.$$

**16386.** (A. M. NESBITT, M.A.)—If every element in the  $r$ -th row of a determinant of order  $n$  be  $1/r^2$ , except that in the principal diagonal

which is  $1 + 1/r^2$ , then, if  $n$  be indefinitely increased, the limiting value of the determinant will be  $1 + \pi^2/6$ .

*Solutions (I.) by Hon. G. R. DICK, M.A.; (II.) by S. NARAYANA AIYAR.*

(I.) Let  $\Delta_n = \begin{vmatrix} 1/1^2 + 1, & 1/1^2, & 1/1^2, & \dots \\ 1/2^2, & 1/2^2 + 1, & 1/2^2, & \dots \\ 1/3^2, & 1/3^2, & 1/3^2 + 1, & \dots \\ \dots & \dots & \dots & \dots \end{vmatrix}$

$$= 1/(1^2 \cdot 2^2 \cdot n^2) \begin{vmatrix} 1 + 1^2, & 1, & & \\ 1, & 1 + 2^2, & & \\ 1, & 1, & 1 + 3^2, & \\ \dots & \dots & \dots & \dots \\ 1, & 1, & 1, & 1 + n^2 \end{vmatrix}$$

$$= 1/(1^2 \cdot 2^2 \cdot n^2) \cdot 1^2 \cdot 2^2 \cdot n^2 [1 + 1/1^2 + 1/2^2 + \dots + 1/n^2],$$

by a well known result (Burnside and Panton, p. 202, 1st ed.)

$$= 1 + (1 + 1/2^2 + \dots + 1/n^2).$$

Thus the limit of  $\Delta_n$ , when  $n$  is infinite, is  $1 + \frac{1}{6}\pi^2$ .

(II.) The determinant

$$\begin{vmatrix} a_1 + x, & b_1, & c_1, & \dots, & l_1 \\ a_2, & b_2 + x, & c_2, & \dots, & l_2 \\ a_3, & b_3, & c_3 + x, & \dots, & l_3 \\ \dots & \dots & \dots & \dots & \dots \\ a_n, & b_n, & c_n, & \dots, & l_n + x \end{vmatrix},$$

where  $a, b, c, \dots, l$  are  $n$  quantities, is equal in value to

$$x^n + x^{n-1} \Sigma (a_1) + x^{n-2} \Sigma (a_1 b_2) + x^{n-3} \Sigma (a_1 b_2 c_3) + \dots + (a_1 b_2 c_3 \dots l_n).$$

Putting  $x = 1$ , and  $a_1 = b_1 = c_1 \dots = l_1 = 1/1^2$ ,

$$a_2 = b_2 = c_2 \dots = l_2 = 1/2^2,$$

$$\dots \dots \dots$$

$$a_n = b_n = c_n \dots = l_n = 1/n^2,$$

we get the determinant given in the Question, and its value is therefore equal to  $1 + (1/1^2 + 1/2^2 + 1/3^2 + \dots + 1/n^2)$ , since the determinants

$$(a_1 b_2), (a_1 b_2 c_3), \dots, (a_1 b_2 c_3 \dots l_n)$$

all vanish. But when  $n$  is infinite  $1/1^2 + 1/2^2 + 1/3^2 + \dots = \frac{1}{6}\pi^2$ ; therefore the value of the given determinant is  $1 + \frac{1}{6}\pi^2$  when  $n$  is infinite.

**16387.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Show how to solve in (unequal) integers

$$N = x^4 + y^4 + z^4 = x'^4 + y'^4 + z'^4 = x''^4 + y''^4 + z''^4 = \dots$$

Give the lowest numbers so expressible in two ways and in four ways.

*Solution by the PROPOSER.*

Every Quartan  $Q = (x^4 + y^4)$  is (algebraically) expressible in the form  $Q = 2u^2 - z^4$ , where  $u = x^2 + xy + y^2, z = x + y$ . Hence

$$N = x^4 + y^4 + z^4 = 2u^2.$$

Now take  $u$  any integer of form

$$u = A^2 + 3B^2 = [(B-A)^2 + (B-A)(B+A) + (B+A)^2].$$

Then  $x, y, z$  are given in terms of two arbitrary integers  $(A, B)$  by

$$x = (B-A), \quad y = (B+A), \quad z = x + y = 2B.$$

Of course  $x, y, z$  are interchangeable in the above.

Next, to solve  $N = x^4 + y^4 + z^4 = x'^4 + y'^4 + z'^4 = \dots$ ,

write  $N = 2u^2 = 2u'^2 = 2u''^2 = \dots$ ,

and take  $u = u' = u'' = \dots$  any composite number expressible in several ways in the forms

$$u = A^2 + 3B^2, \quad u' = A'^2 + 3B'^2, \quad u'' = A''^2 + 3B''^2;$$

then, as before,  $x = B-A, y = B+A, z = x + y = 2B$ ,

with similar results for  $x', y', z'$  in terms of  $A', B', \dots$ , obtained by simply accentuating all the symbols. In general,  $N$  will be expressible in the 4-ic form above in as many different ways as there are different expressions of  $u$  in the 2-ic form  $A^2 + 3B^2$ .

Ex.—Take  $u = 91 = 7 \cdot 13$ , the smallest composite expressible in two (A, B) ways.

Again, take  $u = 1729 = 7 \cdot 13 \cdot 19$  the smallest composite, expressible in four (A, B) ways.

The results  $(x, y, z), \dots$  are as follows

$u$	A	B	$x, y, z$
91 = 7.13	{ 8, 3	{ 5, 11, 6	
	{ 4, 5	{ 1, 9, 10	
	{ 41, 4	{ 37, 45, 8	
	{ 31, 16	{ 15, 47, 32	
1729 = 7.13.19	{ 23, 20	{ 3, 43, 40	
	{ 1, 24	{ 23, 25, 48	

16359. (Professor NEUBERG.)—Diviser un triangle donné ABC par une droite AD, qui rencontre BC en D, en deux triangles ABD, ACD tels qu'en tournant autour de AD ils engendrent des volumes qui soient dans un rapport donné  $m : n$ , ou tels que les surfaces engendrées par les lignes brisées ABD, ACD aient un rapport donné  $m : n$ .

*Solution by W. F. BEARD, M.A.*

(i.) Divide BC at D, so that

BD : DC =  $\sqrt{m} : \sqrt{n}$ .

Draw BE, CF perpendicular to AD,

vol. generated by  $\triangle ABD$   
vol. generated by  $\triangle ACD$

$$= \frac{\pi \cdot BE^2 \cdot AD}{\pi \cdot CF^2 \cdot AD} = \frac{BE^2}{CF^2}$$

$$= \frac{BD^2}{CD^2} = \frac{m}{n}$$

(ii.) Produce CB so that BE = BA,

and BC so that

CF = CA.

Through BE, CF describe circles whose radii are in the ratio

$\sqrt{m} : \sqrt{n}$ .

Let the circle of similitude of these circles meet BC at D. Then D is the point required. Draw BG, CH perpendicular to AD,

surface generated by ABD =  $\frac{\pi \cdot BD(AB + BD)}{\pi \cdot CD(AC + CD)} = \frac{DB \cdot DF}{DC \cdot DE}$

$$= \frac{\text{square of tangent from D to the circle through BE}}{\text{square of tangent from D to the circle through CF}} = \frac{m}{n}$$

because D is on the circle of similitude.

[N.B.—The Proposer remarks that a point D can also be found on BC produced such that it furnishes a solution of the problem.]

16386. (M. V. ARUNACHALAN, M.A.)—Solve

$$\frac{2(1-ab)x}{x+1} = \frac{(1-a^2)(x+y)}{y+1}, \quad \frac{2(1-ab)y}{y+1} = \frac{(1-b^2)(x+y)}{x+1}$$

*Solution by M. T. NARANIENGAR, M.A.*

We have at once  $\sqrt{(1-a^2)(x+1)} = \sqrt{(1-b^2)(y+1)}$ . Hence, by substitution, the equations are solved.

16350. (W. J. GREENSTREET, M.A.)—How many different coefficients may be found in the most general (possible) symmetrical homogeneous function of the  $n$ -th degree in  $x, y, z$ ?

*Solution by Hon. G. R. DICK, M.A.*

This number is evidently the number of partitions of  $n$  into three parts. These partitions are of three kinds: (1) those where the parts (zero included) are distinct, no two being the same; (2) those in which two are the same; (3) when all three are the same, in which case, of course,  $n$  is a multiple of 3. Call these sets A, B, C respectively.

(1) The number of partitions of  $n$  into  $r$  parts, 0 included, no two the same, is the coefficient of  $x^n t^r$  in

$$T \equiv (1+t)(1+xt) \dots (1+x^r t) = 1 + tX_1 + t^2 X_2 + \dots$$

suppose. Taking the logarithmic differential, we get

$$\frac{X_1 + 2tX_2 + 3t^2 X_3 + \dots}{1 + tX_1 + t^2 X_2 + \dots} = \frac{1}{1+t} + \frac{x}{1+xt} + \frac{x^2}{1+x^2 t} + \dots$$

$$= \frac{1}{1-x} - \frac{t}{1-x^2} + \frac{t^2}{1-x^3} - \dots$$

Comparing coefficients of  $t$ , we get

$$X_1 = \frac{1}{1-x}, \quad X_2 = \frac{X_1 - 1}{1-x}, \quad X_3 = \frac{X_2 - X_1}{1-x} + \frac{1}{1-x^2},$$

and so on. By substitution for  $X_1, X_2$ , we get

$$3X_3 = \frac{1}{2(1-x)^3} - \frac{3}{4(1-x)^2} - \frac{3}{4(1-x)^2} + \frac{1}{1-x^2}$$

Now A is the coefficient of  $x^n$  in  $X_3$ ; therefore

$$3A = \frac{1}{2}(n+1)(n+2) - \frac{3}{2}(n+1) - \frac{3}{2} \text{cir}(2, n) + \text{cir}(3, n),$$

where the coefficient of  $x^n$  in  $1/(1-x^r)$  ( $x, a$  integral) is denoted by  $\text{cir}(a, n)$ . The circulating function—a term due to Herschel, I believe—is 0 except when  $n$  is a multiple of  $a$ .

(2) With regard to the partition of  $n$  into the sets B and C, it is easier to proceed thus: (a) Let  $n$  be of the form  $2p$ ; then the number of partitions is 0, 0,  $2p$ ; 1, 1,  $2p-2$ ;  $p, p, 0$  or  $p+1$ . (b) Let  $n = 2p-1$ ; then the number is 0, 0,  $2p-1$ ;  $p-1, p-1, 1$ , or  $p$ , where the case of three possible equal parts is included. Both results are given by

$$\frac{1}{2}(n+1) + \frac{1}{2} \text{cir}(2, n).$$

Thus

$$B + C = \frac{1}{2}(n+1) + \frac{1}{2} \text{cir}(2, n)$$

and

$$A + B + C = \frac{(n+1)(n+5)}{3 \cdot 4} + \frac{1}{2} \text{cir}(2, n) + \frac{1}{2} \text{cir}(3, n),$$

the number required. It is clear that the number of terms in  $(x+y+z)^n$  is

$$6A + 3B + C = \frac{1}{2}(n^2-1) - \frac{3}{2} \text{cir}(2, n) + 2 \text{cir}(3, n) + \frac{3}{2}(n+1) + \frac{3}{2} \text{cir}(2, n) - 3 \text{cir}(3, n) + \text{cir}(3, n) = \frac{1}{2}[(n+1)(n+2)] \text{ as it should.}$$

To find the Equation of the Asymptotes of the Hyperbola given by the general Equation of the Second Degree.

*Another method of Solution by SARADAKANTA GANGULI, M.A.*

Let the equation of the hyperbola be

$$S \equiv ax^2 + 2hxy + by^2 + 2gx + 2fy + c = 0.$$

If the origin be transferred to the centre, this equation will be transformed into

$$ax^2 + 2hxy + by^2 + \Delta/(ab-h^2) = 0,$$

where

$$\Delta \equiv abc + 2fgh - af^2 - bg^2 - ch^2;$$

therefore the equation of the asymptotes referred to parallel axes through the centre is

$$ax^2 + 2hxy + by^2 = 0$$

or

$$ax^2 + 2hxy + by^2 + \Delta/(ab-h^2) = \Delta/(ab-h^2).$$

But the left-hand side, when retransformed to the original axes, becomes S. Therefore the equation of the asymptotes is  $S = \Delta/(ab-h^2)$ .

16388. (ROBT. W. D. CHRISTIE.)—Prove that, if  $a^2 + b^2 = c^2$  integral, then  $s-a, b, s$  are in harmonical progression, and  $s-b, a, s$  are in harmonical progression. Can the theorem be extended?

*Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E., and D. M. KALKAR, B.A., L.T.*

The meaning of  $s$  is not stated; but, if  $s$  is meant to be the semi-perimeter of a right-angled triangle, whose sides are  $a, b, c$ ; then, noting that if  $x, y, z$  be in harmonical progression,  $y = 2xz/(x+z)$ ;

Here  $x = s-a, y = b, z = s = \frac{1}{2}(a+b+c), x = \frac{1}{2}(b+c-a),$

$$\frac{2xz}{x+z} = \frac{2 \cdot \frac{1}{2}(b+c-a) \cdot \frac{1}{2}(b+c+a)}{b+c} = \frac{(b+c)^2 - a^2}{2(b+c)} = \frac{b^2 + 2bc + c^2 - a^2}{2(b+c)} = \frac{2(b^2 + bc)}{2(b+c)} = b,$$

which proves the first required result. The second result by interchanging  $a, b$ . The extension is not obvious, except that the restriction to integer values of  $a, b, c$  is unnecessary. The sole condition is

$$a^2 + b^2 = c^2.$$

The PROPOSER discusses the Question as follows:—

There are at least five expressions in harmonical progression, of which the third term is  $s$ .

Let  $s = \frac{1}{2}(a+b+c)$  and  $S = \frac{1}{2}ab = rs$ ; then

$$s-a, b, s; \quad s-b, a, s; \quad 2b-s, [s(2b-s)]/b, s; \quad 2a-s, [s(2a-s)]/a, s; \quad Ss/(s-S), 2S, s, \dots$$

are all in harmonical progression, as may be proved by ordinary development.

A few geometrical results are:—

(1)  $a^2 + b^2 = c^2$ , also  $[s(2b-s)/b]^2 + \{[s(2a-s)]/a\}^2 = \text{square}$ .

(2) Let  $a = m(m+2n), b = 2n(m+n), c = m^2 + 2mn + 2n^2$ ;

then  $s = (m+n)(m+2n), S = mn(m+n)(m+2n), r = mn = S/s = (s-c) r_1 = S/(s-a) = s-b, r_2 = S/(s-b) = s-a, r_3 = S/(s-c) = s$ .

(3)  $S = (s-a)(s-b) = s(s-c)$ .

(4)  $s : s-a : s-b :: s-c$  in regular proportion.

(5)  $S(s-a)(s-b) = (mns)^2 = (rs)^2$ .

(6)  $mn/(1-mn) : 2mn :: 1, \quad n/(m+n) : 2n/(m+2n) :: 1, \quad m/(m+2n) : m/(m+n) :: 1,$

are three expressions in harmonical progression having anything for the third term, ...

(7) If the cosines of the angles A, B, C of a plane triangle be in arithmetical progression, then  $s-a, s-b, s-c$  will be in harmonical progression (Ferrers and Jackson).

**16351.** (Professor SANJANA, M.A.)—Prove the following identity :—  
 $4a^2p^2 - (b^2 + q^2 - c^2 - r^2)^2 + 4b^2q^2 - (c^2 + r^2 - a^2 - p^2)^2 + 4c^2r^2$   
 $- (a^2 + p^2 - b^2 - q^2)^2 - [4q^2r^2 - (q^2 + r^2 - a^2)^2]$   
 $- [4r^2p^2 - (r^2 + p^2 - b^2)^2] - [4p^2q^2 - (p^2 + q^2 - c^2)^2]$   
 $= 2a^2b^2 + 2b^2c^2 + 2c^2a^2 - a^4 - b^4 - c^4.$

Solution by C. M. ROSS.

$$4a^2p^2 - (a^2 + p^2 - b^2 - q^2)^2 = (2ap + a^2 + p^2 - b^2 - q^2)(2ap - a^2 - p^2 + b^2 + q^2)$$

$$= [(a + p)^2 - (b^2 + q^2)][-(a - p)^2 + (b^2 + q^2)]$$

$$= -(a^2 - p^2)^2 + 2(a^2 + p^2)(b^2 + q^2) - (b^2 + q^2)^2 \dots (1),$$

$$4b^2q^2 - (b^2 + q^2 - c^2 - r^2)^2 = -(b^2 - q^2)^2 + 2(b^2 + q^2)(c^2 + r^2) - (c^2 + r^2)^2 \dots (2),$$

$$4c^2r^2 - (c^2 + r^2 - a^2 - p^2)^2 = -(c^2 - r^2)^2 + 2(c^2 + r^2)(a^2 + p^2) - (a^2 + p^2)^2 \dots (3),$$

Adding (1), (2), (3),

$$\Sigma [4a^2p^2 - (a^2 + p^2 - b^2 - q^2)^2] = -2\Sigma a^4 - 2\Sigma p^4 + 2\Sigma (a^2 + p^2)(b^2 + q^2) \dots (4).$$

Again,

$$-\Sigma [4q^2r^2 - (q^2 + r^2 - a^2)^2] = -\Sigma (2qr + q^2 + r^2 - a^2)(2qr - q^2 - r^2 + a^2)$$

$$= -\Sigma [(q + r)^2 - a^2][-(q - r)^2 + a^2]$$

$$= \Sigma [(q^2 - r^2)^2 - 2a^2(q^2 + r^2) + a^4]$$

$$= 2\Sigma p^4 - 2\Sigma q^2r^2 - 2\Sigma a^2(q^2 + r^2) + \Sigma a^4 \dots \dots (5).$$

Adding (4) and (5),

$$\Sigma [4a^2p^2 - (a^2 + p^2 - b^2 - q^2)^2] - \Sigma [4q^2r^2 - (q^2 + r^2 - a^2)^2] = 2\Sigma b^2c^2 - \Sigma a^4.$$

**16375.** (C. JOSS, M.A.)—Prove geometrically that the envelope of the sides of the triangles in a given circle with a common orthocentre is an ellipse.

Solution by S. NARAYANA AIYAR.

All these triangles have the same circum-centre, orthocentre, and circum-radius. But it is a well known proposition that the ellipse, described with the circum- and orthocentres as foci, and the transverse axis equal to the circum-radius, always touches the sides of the triangle, i.e., the envelope of the sides of all these triangles is this ellipse.

**16266.** (Professor E. B. ESCOTT.)—Find a line which is both tangent and normal to the cardioid.

Solution by the PROPOSER.

It is well known that the evolute of an epicycloid is a similar epicycloid. The evolute of a cardioid is a cardioid with the radius of the base circle  $\frac{1}{3}$  of the radius of the base circle of the given cardioid. Since the tangent is to be normal to the curve, it must be tangent to the evolute. The problem may then be stated: To find the common tangent of the cardioid and its evolute.

The equation of the curve with the centre of the base circle O as origin is

$$x = a(2 \cos \theta + \cos 2\theta), \quad y = a(2 \sin \theta + \sin 2\theta).$$

The tangent at the point  $\theta_1$  is

$$y - \frac{\cos \theta_1 + \cos 2\theta_1}{\sin \theta_1 + \sin 2\theta_1} x + 3a \frac{1 + \cos \theta_1}{\sin \theta_1 + \sin 2\theta_1},$$

or it may be written

$$y = -\cot \frac{3}{2}\theta_1 \cdot x + \frac{3a \cos \frac{1}{2}\theta_1}{\sin \frac{3}{2}\theta_1}.$$

The evolute is

$$x = -\frac{1}{3}a(2 \cos \phi + \cos 2\phi), \quad y = \frac{1}{3}a(2 \sin \phi + \sin 2\phi);$$

and its tangent  $y = \cot \frac{3}{2}\phi_1 \cdot x + a \cos \frac{1}{2}\phi_1 / \sin \frac{3}{2}\phi_1.$

Since these two tangents must be the same,  $-\cot \frac{3}{2}\theta_1 = \cot \frac{3}{2}\phi_1$ , i.e.,

$$\sin \frac{3}{2}(\phi + \theta) / \cos \frac{3}{2}\phi \cos \frac{3}{2}\theta = 0, \quad \frac{3}{2}(\phi + \theta) = n\pi,$$

$$\phi + \theta = \frac{2}{3}n\pi, \quad \phi = \frac{2}{3}n\pi - \theta.$$

Substituting and equating the constant terms in the equations of the tangents, we have

$$\cos(\frac{1}{3}n\pi - \frac{1}{2}\theta) / \sin(n\pi - \frac{3}{2}\theta) = 3 \cos \frac{1}{2}\theta / \sin \frac{3}{2}\theta.$$

Solving, we have  $\tan \frac{1}{2}\theta = -(3 + \cos \frac{2}{3}n\pi) / \sin \frac{2}{3}n\pi.$

- (a) If  $n = 0$ ,  $\tan \frac{1}{2}\theta = \infty$ ; therefore  $\theta = \pi$ .
- (b) If  $n = 1$ ,  $\tan \frac{1}{2}\theta = \frac{5}{3}\sqrt{3}$ .
- (c) If  $n = 2$ ,  $\tan \frac{1}{2}\theta = -\frac{5}{3}\sqrt{3}$ .

(a)  $n = 0$ , tangent line is  $y = 0$ . Tangent at cusp.  
 (b)  $n = 1$ , tangent line is  $y = -\frac{9}{10}\sqrt{3}x - \frac{2}{5}a\sqrt{3}$ . Co-ordinates of point of tangency,  $(-\frac{13}{10}a, \frac{1}{5}a\sqrt{3})$ . Point at which tangent is normal to the curve,  $(-\frac{1}{10}a, -\frac{3}{5}a\sqrt{3})$ .

(c)  $n = 2$ . Symmetrical to the last.

QUESTIONS FOR SOLUTION.

**16419.** (S. NARAYANA AIYAR.)—Integrate

(a)  $\int \frac{\cos(\phi_0 + \phi_1 + \phi_2 + \dots + \phi_n)}{\rho_0\rho_1\rho_2 \dots \rho_n} d\theta,$   
 (b)  $\int \frac{\sin(\phi_0 + \phi_1 + \phi_2 + \dots + \phi_n)}{\rho_0\rho_1\rho_2 \dots \rho_n} d\theta,$

where  $\phi_p = \tan^{-1} \sin \theta / (p + \cos \theta)$  and  $\rho_p = \sqrt{1 + 2p \cos \theta + p^2}.$

**16420.** (Rev. F. H. JACKSON, M.A.)—Transform

$$1 + ax + a^2x^2 + a^3x^3 + \dots$$

into  $\frac{1}{1-x} + \frac{(a-1)x}{(1-x)(1-qx)} + \frac{(a-1)(a-q)}{(1-x)(1-qx)(1-q^2x)}$   
 $+ \frac{(a-1)(a-q)(a-q^2)}{(1-x)(1-qx)(1-q^2x)(1-q^3x)} + \dots,$

with easily obtained conditions for convergence. Similarly transform

Gauss's series,  $\frac{x}{1-q} + \frac{x^2}{1-q^2} + \frac{x^3}{1-q^3} + \dots$

into  $\frac{x}{(1-q)(1-x)} - \frac{qx^2}{(1-q^2)(1-x)(1-qx)}$   
 $+ \frac{q^2x^3}{(1-q^3)(1-x)(1-qx)(1-q^2x)} - \dots$

The numerator of the n-th term being  $q^{n(n-1)x^n}.$

**16421.** (D. BIDDLE.)—It is well to be forearmed against the invasion into the domain of mathematics, of the general feeling of insecurity which even now prevails in other spheres of thought, in which case direct methods of procedure will be out of favour. The four primary rules of arithmetic will not escape. Therefore, taking A and B as two given unequal integers, of which B is the smaller, (1) without adding B to A, find their sum; (2) without subtracting B from A, find their difference; (3) without multiplying A by B, find the product; (4) without dividing A by B, find the quotient.

**16422.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Give the general solution of, and also the lowest solution in integers of,

$$(x^4 + y^4 + z^4)^2 = 2(x^8 + y^8 + z^8).$$

**16423.** (T. STUART, M.A., D.Sc.)—Prove rigidly that the prime factors of  $N \equiv 2x^2 - y^2$ , where  $x = 3tu(t+u)$ ,  $y = t^2 - 3tu^2 - u^2$ , are always of the form  $\pm 1 \pmod{18}$ , e.g.,

$$2 \cdot 36^2 - 17^2 = 109 \cdot 811, \quad 2 \cdot 18^2 - 1^2 = 107 \cdot 109, \quad 19^2 + 2 \cdot 18^2 = 18523.$$

Show further that, if

$$t = u' [2(t' \cdot u')^2 - u'^2], \quad u = (t' + u') [2t'^2 - (t' + u')^2],$$

where  $t', u'$  are any integers, then N is expressible algebraically in the form  $X^2 - 27Y^2$ , and find X and Y.

**16424.** (R. W. D. CHRISTIE.)—Let  $a^2 + b^2 = c^2$  integral, e.g.,

$$209^2 + 120^2 = 241^2,$$

then  $(a+d)^2 + (b+x)^2 = (c+d)^2, \quad 240^2 + 128^2 = 272^2,$

$$(a+e)^2 + (b+2x)^2 = (c+e)^2, \quad 273^2 + 136^2 = 305^2,$$

$$\dots \quad \dots \quad \dots \quad \dots \quad \dots$$

# THE LAST WORD IN FRENCH BOOKS

**NOT OLD-FASHIONED.  
NOT NEW-FANGLED.**

"They combine all the advantages of the New Method, without sacrificing anything of the Old."

## Omega Press French Series.

### PRACTICAL FRENCH GRAMMAR.

By W. H. FRASER, B.A., and J. SQUIR, B.A., Professors of the Romance Department, Toronto University. With an Introduction by WILLIAM ROBERTSON, M.A., Examiner in Modern Languages for the University of Aberdeen (1901-4). Crown 8vo, 3s. 6d.

A very practical and thorough course, with composition and conversation exercises. Special help has been given in pronunciation, and the exercises deal with topics of everyday life, and make provision for regular oral as well as written practice.

Mr. Robertson, in his Introduction, says:—"I believe that a full and fair examination of this work will compel every competent judge to pronounce it the best of its kind."

This estimate has been fully justified by the success of the book in practice. Many of the leading Institutions of Great Britain and Ireland have adopted it. The following are a few of the many important schools which have introduced this book:—

Aberdeen Grammar School.  
Belfast, Royal Academical Institution.  
Belfast, Victoria College.  
Bradford Grammar School.  
Carnarvon County School.  
Derby, High School.  
Edinburgh, George Watson's College.  
Edinburgh, Royal High School.  
Edinburgh, The Ladies' College.  
Glasgow, The Academy.  
Greenwich, Roan School.  
High Wycombe, County High Schools.  
Horsham, Christ's Hospital.  
King's College (over 2,000 pupils).

Leeds, The Yorkshire College.  
Newcastle-on-Tyne, Allan's Endowed School.  
Oundle School.  
Oxford, Diploma Correspondence College (2,000 pupils).  
Oxford, Wolsey Hall.  
Pontefract, Ackworth School.  
Reading, High School.  
St. Olave's Grammar School, Southwark.  
Strand School, London.  
Swansea Grammar School.  
Warwick, King's High School.  
Wellingboro' Grammar School.  
Wolverhampton Grammar School.

In Canada the book is used in every Collegiate Institute where French is taught in the province of Ontario, and it is in use in practically all the High Schools from Ontario to the Pacific coast, besides in many schools throughout Nova Scotia, New Brunswick, &c., &c.

In the United States its success has been so general that a partial list of the Colleges and Schools using it occupies some seventeen pages of print, and this list includes:—

YALE UNIVERSITY,  
CORNELL UNIVERSITY,  
JOHNS HOPKINS UNIVERSITY,  
CHICAGO UNIVERSITY,  
LELAND UNIVERSITY, and  
49 Other Universities.

### PRACTICAL FRENCH COMPOSITION.

For Middle and Senior Classes. By J. E. MANSION, B. ès L., Royal Academical Institution, Belfast. Crown 8vo, 2s.

A New Series of carefully graduated Reading Books designed to form a Ladder to Literature.

### The Royal Treasury of Story and Song.

The First Series of Literary School Books in which each reading is complete in itself, and of sufficient length to arouse and sustain juvenile interest. Each volume beautifully illustrated with numerous full-page Pictures in colour and black and white, as well as marginal Drawings of an interesting and charming character.

**The Royal Treasury will be published in Seven Parts, of which the following are now ready:—**

- Part I. **DOORS OF GOLD.** 128 pages. 10d.  
Select fairy tales, simply written, with familiar rhymes and verses. Illustrations on almost every page.
- Part II. **FAIRY FAVOURS.** 160 pages. 1s.  
Imaginative tales from good literary sources, select folk-tales of a romantic and humorous character, with a selection of some of the best fairy poetry in the language. Fully illustrated.
- Part III. **THE HALL OF HEROES.** 208 pages. 1s. 3d.  
Tales of early heroes of the chief European nations, including Jason, Theseus, Hercules, Beowulf, Siegfried, Arthur, Conall, and Roland; with narrative poetry, mostly of a simple ballad character. Fully illustrated.
- Part IV. **GOLDEN GIFTS.** 272 pages. 1s. 6d.  
Romantic tales and narrative poetry.

Parts V., VI., and VII. are in active preparation.

### CAMEOS OF LITERATURE.

Educational Agents,

158 to 162 OXFORD STREET,  
LONDON, W.

Telegrams—“TUTORESS, LONDON.”  
Telephone—No. 1136 City.

*This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.*

**A.—EMPLOYMENT DEPARTMENT.**

(i) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

# MESSRS. BELL'S NEW BOOKS.

## MASON'S NEW ENGLISH GRAMMARS.

Revised in accordance with Modern Requirements by

A. J. ASHTON, M.A.,

Senior English Master, Kelvinside Academy, Glasgow; and Examiner in English to the College of Preceptors.

Now Ready. Crown 8vo. 125 pages. 1s.

## MASON'S JUNIOR ENGLISH GRAMMAR.

This new edition of MASON'S ENGLISH GRAMMARS has been augmented and revised so as to embody the results of the advances that have been made in the teaching of English Grammar since these grammars were last revised by Mr. Mason. The new edition will consist of three courses—Junior, Intermediate, and Senior—and will be printed in good bold type and strongly bound in cloth. The Intermediate and Senior volumes are in active preparation.

## BELL'S ENGLISH TEXTS FOR SECONDARY SCHOOLS.

General Editor: A. GUTHKELCH, M.A.

NEW VOLUMES.

**CHARLES READE: THE CLOISTER AND THE HEARTH.** Abridged and Edited by the Rev. A. E. HALL, B.A., Assistant Master, Bancroft's School. 1s.

**SCOTT: A LEGEND OF MONTROSE.** Abridged and Edited by F. C. LUCKHURST, Assistant Master, Sir Walter St. John's School, Battersea. 1s.

**ENGLISH ODES.** Selected and Edited by E. A. J. MARSH, M.A., Assistant Master, Hanley Secondary School. 1s.

Detailed Prospectus sent on application.

Third Edition, Revised and much Enlarged. Reset throughout. Crown 8vo. 666 pages. 6s.

## AN INTRODUCTION TO ENGLISH LITERATURE.

By HENRY S. PANCOAST.

For this new edition the first half of the book has been practically rewritten, and the chapters dealing with the Early and Middle English periods have been considerably enlarged. Greater space has also been given to the literature of the Queen Anne and Victorian periods, and separate lives of Bunyan, Dryden, Steele, Cowper, and others have been added.

Crown 8vo. With the original Maps. 2s.

## JOSEPH HALL MUNDUS ALTER ET IDEM.

(AN OLD WORLD AND A NEW.)

Edited for School use, with Introduction, Notes, and Vocabulary, by

H. J. ANDERSON, M.A.,

Inspector of Training Colleges in Cape Colony; late Classical Master at Hillhead Public School, Glasgow.

This abridged edition of Bishop Hall's famous satire is intended for use as a Latin Reader at the awkward period which immediately precedes the reading of difficult authors. The notes have been made as brief as possible, but there is a Vocabulary and an Index of Proper Names.

Just Published. Crown 8vo. 1s. 6d.

## ESSENTIALS OF FRENCH GRAMMAR.

AN EXERCISE BOOK FOR JUNIOR CLASSES.

By HECTOR WILSHIRE, M.A.

A THREE YEARS' COURSE IN PRACTICAL PHYSICS.

Now Ready. Crown 8vo. With numerous Diagrams. 1s. 6d.

## A THIRD YEAR'S COURSE IN PRACTICAL PHYSICS.

By JAMES SINCLAIR, M.A. Glas., B.Sc. Lond., Head Science Master in Shawlands Academy, Glasgow.

This volume continues the work of the "First Year's Course" and "Second Year's Course," already published, and deals with Light.

London: GEORGE BELL & SONS, York House, Portugal Street, W.C.

## A FIRST FRENCH WRITER.

For the use of Lower and Middle Forms of Schools. Crown 8vo, 3s. 6d.

# Cambridge University Press

**Sophocles. Trachiniae,** with a Commentary, abridged from the larger edition of Sir RICHARD C. JEBB, Litt.D., by GILBERT A. DAVIES, M.A., Professor of Greek in the University of Glasgow.

Crown 8vo,  
4s.

Uniform with the abridged editions of the plays of Sophocles already published by the Cambridge University Press: "Oedipus Tyrannus," edited by Sir R. C. JEBB; "Ajax," edited by A. C. PEARSON, M.A.; "Antigone," "Philoctetes," and "Oedipus Coloneus," edited by E. S. SHUCKBURGH, Litt.D.

**Chaucer. The Prologue and The Knight's Tale.** Edited, with Introduction, Notes, and Vocabulary, by M. BENTINCK SMITH, M.A.

Fcap. 8vo,  
2s. 6d.

Portions of the introduction have been written with a view to the teacher rather than the pupil, the editor's aim being to give in a concise form the materials which the teacher requires to have at his disposal if the taught are to obtain an adequate conception of Chaucer's importance in the history of English literature and language. A short bibliography containing a list of authorities has been appended.

**The New Testament in Greek,** according to the text followed in the Authorised Version, together with the Variations adopted in the Revised Version. Edited by F. H. A. SCRIVENER, M.A., D.C.L., LL.D.

Revised  
Net Prices.

The special design of this edition is to place clearly before the reader the variations from the Greek text represented by the Authorised Version of the New Testament which have been embodied in the Revised Version, the readings adopted by the revisers being printed at the foot of the page. The publication of such an edition appeared to be all the more desirable, inasmuch as the Authorised Version was not a translation of any one Greek text then in existence, and no Greek text intended to reproduce in any way the original of the Authorised Version had ever been printed.

This edition of the New Testament in Greek is now issued in two sizes, at the following prices:—

- Foolscap 8vo, cloth, 3s. net (originally published at 4s. 6d.).
- Foolscap 8vo, printed on India paper, cloth, 4s. 6d. net.
- Crown 8vo, cloth, 3s. 6d. net (originally published at 6s.).
- Crown 8vo, printed on India paper, cloth, 5s. net.

## Books suitable for the CAMBRIDGE LOCAL EXAMINATIONS, JULY AND DECEMBER, 1909

### THE PITT PRESS SHAKESPEARE FOR SCHOOLS

With Introduction, Notes, and Glossary by A. W. VERITY, M.A.

**Julius Caesar.** Tenth Edition. 1s. 6d. [*Juniors & Seniors.*]

"Another of Mr. Verity's admirable school editions of Shakespeare's plays."  
—*Guardian.*

**King Richard II.** Sixth Edition. 1s. 6d. [*Seniors.*]

"Every page shows careful scholarship and a ripe literary judgment; it would be difficult to praise this work (or this series) too highly."  
—*School World.*

**Lamb's Tales from Shakespeare.** A Second Selection (A Midsummer Night's Dream, The Winter's Tale, Much Ado About Nothing, Macbeth, The Comedy of Errors, Othello). Edited, with Introduction, Glossary, and an Appendix of Extracts from Shakespeare, by J. H. FLATHER, M.A. 1s. 6d. [*Preliminary.*]

**Ballads and Poems Illustrating English History.** Edited by FRANK SIDGWICK. 1s. 6d. [*Juniors.*]

"The ancient saying that the songs of a nation are more important than its laws seems to have inspired the compilation of 'Ballads and Poems.'... Fortunate will be those young pupils whose lessons in history are imprinted on the memory by learning these poems. The selection has been carefully made."  
—*Tribune.*

**Scott. A Legend of Montrose.** Edited by H. F. MORLAND SIMPSON, M.A., Rector of Aberdeen Grammar School. 2s. 6d. [*Juniors.*]

**Bacon's Essays.** Edited by ALFRED S. WEST, M.A. 3s. 6d. [*Seniors.*]

### THE CAMBRIDGE SCHOOL HISTORY OF ENGLAND

**History of England for Use in Schools.**

By ARTHUR D. INNES, M.A. Complete in One Volume, or in Three Parts. Part I., To 1509 A.D. Part II., 1509-1714 A.D. Part III., 1689-1901 A.D. A separate Part is also issued containing the Period "From the Wars of the Roses to the Death of Elizabeth" (1399-1603).

Crown 8vo,  
with 13 Maps  
and 8 Plans,  
4s. 6d.  
Parts, 2s. each.

"Though written primarily as a school history, this volume of some 600 pages may well be recommended to the average reader as a standard book of reference for facts and dates in English history. Proportion, thoroughness, and accuracy of detail are its outstanding features, while for the student the demands of the examiner have been kept steadily in view."  
—*Glasgow Herald.*

## The Educational Times.

### Attempts at Advance.

THE anomalies, apparent or real, in our educational proposals must be somewhat perplexing to the inquiring stranger, for they occasion uneasy remark even within our own gates. The homogeneity of the United Kingdom is seen to be still considerably defective. The English Education Bill turns mainly upon ecclesiastical, not to say sectarian, differences: the education of the child, at least in reference to the things of this world, is practically forgotten in the remote background, while the live contention is for the upper hand in his scholastic nurture in religion, as to the essential elements of which it seems impossible for the combatants to agree. "It is interesting," says a contemporary, "to notice how much larger a part educational matters pure and simple take in the Scottish Bill compared with Education Bills affecting England." Interesting? Very much so, and instructive as well. The Scottish people have settled definitively the so-called religious question, and there is no room for any clause on the subject in a Bill dealing with Scottish education; nor do the people or the children seem to be a whit the worse. Again, in the debate on the Irish University Bill, it was cleverly pointed out that, while the Government were labouring to exclude denominationalism from English schools, they were labouring to establish Universities in Ireland practically on a denominational basis. The answer is sufficiently obvious; but the cause of the apparent anomaly lies again in the stress placed upon the religious element in education.

The largest concern centres in the English Bill, were it only for the wider applications involved in it. A month ago there seemed to be a wave of feeling in favour of conciliation and settlement, but since then the appearances have wavered uncertainly. The Archbishop of Canterbury needs all his authority and persuasiveness to keep his natural followers together on the lines he advises: both in the Convocation of Canterbury and in the Representative Church Council the omens have not been encouraging. The real difficulty is to get men—perfectly honest and well disposed men—to take their eyes off one or other particular aspect of the question,

and to look steadily at it on all sides. Especially important is it to regard the negative aspect of the whole matter, and to face the alternative that threatens in the event of the failure of the Bill—an alternative that would disappoint the wishes and the hopes of the people far more than the acceptance of the most objectionable elements of the Bill, and that would be still more distressing to Churchmen themselves, and distressing in proportion to the sincerity of their convictions. It is also well to remember, what is always apt to be overlooked in the heat of conflict, that the results of a practical course taken deliberately by a large section of the people are likely to be surprisingly less disastrous than the imagination of opponents naturally pictures them in anticipation. The Act of 1902 looks remarkably innocent to-day, in comparison with the fervid anticipations of opponents at the time it was under discussion. The objectors to the policy of bringing the tram lines over Westminster Bridge can hardly but be amazed at the results: the man that would propose to tear up the rails would be regarded as a fanatic. We do not for a moment lose sight of the importance of the interests that the opponents of the Bill seek to conserve: we simply desire to have the other aspects of the measure taken into fair account, and some reasonable compromise effected, so as to relieve education, at once and permanently, from the disturbing influences of an embittered contest. Although Mr. Balfour showed a stiff front on the second reading, and no doubt means—as he is fully entitled, and indeed bound—to stand out for the best terms, we cannot believe that he is capable of treating the question as a mere political pawn, and "desires that the religious difficulty should be unsolved at the next general election." At all events, the olive branch was held out very frankly by the Prime Minister, and it seems the part of wisdom to grasp it promptly and firmly.

In Scotland the trouble is that educational legislation lags far behind the public sentiment. Four or five Bills in succession have come to nothing, and even the present Bill is considered to be inadequate to the requirements of the time. It does not extend the administrative areas—a reform that is widely regarded as urgent, both in the public interest and specially for the better protection of teachers. A reduction of the number of School Boards would be a reduction of official expenditure. The narrow area secures opportunity for concentration of local interest, but it also gives scope

for local worry of the teacher on grounds that are professedly educational, though possibly irrelevant to education. This is an unfortunate risk of the system, and recently there have been several ugly cases. We are not in a position to dogmatize; but it may, we suspect, be doubted whether, as a rule, the teacher that gets into trouble with his parish Board would escape trouble with a two-parish Board. However, the Bill takes a first step to make continuation classes compulsory up to the age of seventeen. School Boards are required to provide continuation classes and are empowered to make, vary, and revoke by-laws regulating attendance at such classes. Moreover, in granting exemption certificates, they may impose as a condition of exemption such attendance as they think fit between the ages of fourteen and seventeen, either at a day school or at a continuation class or at both. Nay, it is to be a punishable offence to employ a boy or a girl at any time when his or her attendance is required by by-law at a continuation class, and the parents are subjected to fine if they fail to assist the local School Board in such a case of conflicting requirements. The operation of these clauses of the Bill will be watched with special interest by the promoters of the system of continuation classes in English schools. The Bill further proposes to invest School Boards with additional general powers to supply meals to hungry children (with provisos for defraying expenses), to arrange for the conveyance of children to school from outlying districts, and to collect and distribute information as to employments open to children on leaving school. It also tightens the grip on parents that may neglect to see that their children are obtaining efficient education between the ages of five and fourteen. If not quite so comprehensive and thorough-going as the country is prepared for, the Bill yet attempts an advance on several important lines, and there will be deep dissatisfaction if it shares the fate of its last half-dozen predecessors.

### NOTES.

"THE main thing for Ireland, now that the Universities in Dublin and Belfast look as if they are to become accomplished facts, is," says the *Leinster Leader*, "to see that these institutions are as efficient and as thoroughly tuned to the natural wants of the country as it is possible for them to be. . . . They must touch the nation at every vital point, energizing and developing it along its own natural and rational lines." But these Universities are not yet accomplished facts, and it is rather early to be very confident about the probabilities of the future. Dr. O'Dwyer has sounded a strongly dissonant note in the *Irish Educational Review*; the right of Mr. Dillon to speak for the Catholics is contested; and Rome has not yet spoken. In any case it is plain that modifications of considerable importance will be claimed by the Catholic spokesmen. Even Protestants protest against patent inequalities. Thus, Judge Shaw remonstrates with his friends of the National Assembly:

Let them try to conciliate Roman Catholic opinion, to allay the suspicions and soothe the susceptibilities of their Roman Catholic neigh-

bours, by seeking for a fair representation of the Roman Catholics of Ulster on the Senate of the new University. Is there only one Roman Catholic gentleman in the whole province who is fit to be on the Senate? Why should there be seven Protestants on the Senate of the new University at Dublin and only one Roman Catholic on the Senate at Belfast? Why should we allow ourselves to be outdone in generosity and liberality by our Roman Catholic countrymen? Why should we lay ourselves open to the reproach that we are always non-sectarian for others, and always sectarian for ourselves?

"Let the Assembly's Commission," he adds, "use all its Assembly powers to widen the basis of the government of the new University and to make it a home of learning for the whole province, and not merely for a sect, and then they will give assurance to the world that they are non-sectarian in deed and in truth."

THERE need be no hesitation in agreeing with the *Morning Post* that it is "at least deserving of consideration whether this country ought not to follow the example set by France and Germany in establishing separate institutions for the pursuit of colonial studies." The Colonial School at Paris dates from 1889—nearly twenty years ago—and we dare say has done useful work in its time, though we have had no opportunity of studying the results. Germany is only planning a start. Herr Dernburg, the German Colonial Minister, has got the Hamburg Senate to agree to establish a Colonial Institute, which will receive a certain number of students every year from the German Colonial Office, and will associate with these "the prospective merchant and settler." And "in this way it is hoped to create sympathetic relations that will in time break down the bureaucratic barriers which separate the official classes in the German colonies from the rest of the community, white as well as black, and which offer such a serious obstacle to progress." The task is as formidable as it is wise. We wish it every success. The British Empire is another affair. There is certainly "no reason why a knowledge of colonial history and colonial conditions should be supposed to be unnecessary in the case of those who take up British colonial appointments." We should imagine, however, that any man taking up such an appointment would be able to make himself tolerably familiar with all the essentials of the history and conditions of the colony he is going to during the course of his voyage out. Once there, he comes within the official tradition, to which he must conform, whatever his previous book studies have taught him. A good deal may be learnt by intending emigrants in practical matters, such as agriculture; but the official appointee must learn on the spot. The first and the last lesson should be on the laying aside of prejudices and the cultivation of broad human sympathy—a lesson that the German bureaucrat is less ready to teach or to learn than even the British official.

THE *Times* correspondent that is giving his experiences of "A Year amongst Americans" states that he has "found teachers the most attractive class in the nation, because more than any other class, not excepting the clergy, they are free from sordid aims." This is a very handsome testimonial, especially when the writer points out that "the average salary is small and inadequate"—that "neither in school nor in college will a teacher's ordinary income carry

him much above want." The following two positions point a striking contrast :

"Americans spend vast sums of money upon every part of their schools' equipment, except the human, which alone is indispensable."

The great majority of representative educators and educationists assembled in convention at Los Angeles repudiated the movement led by Miss Margaret Haley for the organization of a teachers' union in federation with labour unions for common ends—repudiated it "as derogatory to themselves and their profession and antagonistic to the principles of public education at public expense."

There is one alleviation, however, of a very marked character—the "Sabbatical year"—one year's holiday in seven on full pay, the understanding being that the teacher shall spend it in rest and travel, usually on the continent of Europe, for the further study of educational and economic conditions. The principle of the Sabbatical year is well worth consideration in other countries.

COMPARISONS over a wide field by a single observer are too difficult to be received without caution, but the following statements of the *Times* correspondent have a certain interest :

In America, more completely perhaps than in England, teachers keep the roots of their being fed by the cultivation of their individual tastes in books, amusement and travel. . . . It should also be said that, by the intermingling of the teachers of the several States, there is being fostered a sense of fraternity in effort, achievement, and destiny; and thus a vital relation between the schools in all parts of the vast continent is being established and is already having a beneficial influence upon the educational interests of each part, especially in raising the standard of education in those parts where hitherto it has been lower than the average which prevails. In consequence, there is an approach towards uniformity in the educational standards of the different States, although there is not even the semblance of national control.

"I have met," says the correspondent, "few serious teachers of either sex who did not deplore the excessive preponderance of women on the teaching staffs of secondary schools and the higher classes of elementary schools." His remarks on the teaching of religion in a secular State are opportunely suggestive :

Religious teaching, excluded from the day schools, is being systematically and thoroughly promoted in the Sunday schools, which in America, although they are still shamefully inferior to the public schools, are greatly superior in their teachers, their methods, their equipment, their curriculum, their grading, and their results, to similar institutions in England. The Sunday school has not become, but it is becoming, entitled to rank as part of the educational system of the United States. The State sees that democracy cannot rest upon an ignorant *demos*, and by the secular education of the children is ensuring general enlightenment and a great increase of material wealth. The Churches see that democracy cannot rest upon an unspiritual *demos*, and by the religious education of the children are ensuring that the wealth of the nation shall not be a mere mass of "things" in which a nation's, as a man's, "life consisteth not."

"This," he adds, "is the most hopeful feature of American life; for America is committed, apparently irrevocably, for weal or for woe, to exclusively secular education in the public schools."

WITH all respect for the Royal Society of Literature, one cannot but think that its honorary membership is a somewhat meagre recognition of the eminence of the President of the German Shakespeare Association and Professor of English in the University of Berlin. Still the Society did its best to honour Prof. Alois Brandl on his recent visit, and the fault does not lie with it. Possibly Prof. Brandl's opinions about the relative purity of English and American English have deflected the judgment of our greater literary societies. One can understand his condemnation of the "Cockney twang"; but the land of Cockayne is not yet
